On March 15th at the Madison Hotel in Atlantic City, the three day convention of the New Jersey Mosquito Extermination Association will get under way. This is more than a New Jersey affair. It is attended by mosquito control experts from all over the United States and often from foreign shores. Subjects are discussed in which every mosquito worker should be interested and the proceedings of the Annual Meeting which are published after the meeting is concluded constitute another milestone in the advance of the science of exterminating mosquitoes.

This year as last year is a war year and it is expected that the main topics of discussion will be centered around the nation's war effort. The Public Health Service and the Medical Corps of the Army, Navy and Marines have encountered many unusual experiences. The wide area covered by these organizations make these new discoveries all the more exciting. Our armed forces are spread out all over the world and the health units carry on wherever the armed forces go. Of course, many of the new ideas evolving from the war effort are military secrets but there still should be much of interest brought forth in the next convention. This may be the last war time meeting of the association and it is expected and hoped by all those who attend that for this reason the meeting will be filled with intensely interesting items.
