WORK CONFERENCE ON LIVESTOCK INSECTS

The Entomology Research Division of the Agricultural Research Service, U. S. Department of Agriculture, and Section D (Medical and Veterinary Entomology) of the Entomological Society of America are again sponsoring a work conference on livestock insects. The sponsoring organizations had accepted an invitation by Dr. T. H. Anstey, Director, Canada Agriculture Research Station, in December 1963 to hold the conference at Lethbridge, Alberta, Canada, in 1966. The conference will be held June 28-30 at Lethbridge Junior College.

The meeting dates are later than usual this year and coincide with the peak of the tourist season in Canada. Those who plan to attend the conference should therefore make their travel and motel

reservations as early as possible, preferably by May 15.

As in past years, time has been allocated for reports by research, extension, and industry workers. Specific topics of discussion include: (1) cattle grubs and other bots, (2) the face fly, and (3) stable flies, lice, ticks, and other pests of livestock. The times allocated for the various topics and groups should permit considerable open discussion and exchange of information and ideas for future work.

Further information and details of the program can be obtained from W. C. McDuffie, Chief, Insects Affecting Man and Animals Research Branch, Entomology Research Division, Beltsville, Maryland 20705.
