

of the respective County Director of Civil Defense.

The strong consensus of this committee is that any Federal funds, such as may possibly be available in the future from the Economic Development Administration, be used only for permanent mosquito control measures. This program is so new that guidelines are presumably now being drawn up since correspondence requesting clarification and information from the agency remains unanswered.

Provisions of the Economic Opportunity Act have been examined with reference to possibly providing trainee labor for mosquito control agencies. Up to the present time the committee was unable to find any cases where the EOA was used by a mosquito control agency for a labor source. In some states and in the *Aedes aegypti* Eradication Program, efforts to get approval of EOA projects have

been uniformly unsuccessful. In most communities however, implementation of the Economic Opportunity Act has barely begun and local EOA officials are feeling their way cautiously. It appears that Title I of the Act, particularly IB, the Neighborhood Youth Corps, and IC, the College Work Study Program would provide the greatest possibilities for mosquito control work forces. Title V, the Work Experience section, could possibly provide older workers, those who have been chronically unemployed for one or more reasons in the past. Mosquito Abatement District managers should get in touch with their local EOA office if they are interested in investigating this labor source.
