

Collection Records of the Project "Mosquitoes of Middle America"**2. Puerto Rico (PR,PRA,PRX) and Virgin Is. (VI,VIA)¹**

John N. Belkin and Sandra J. Heinemann²

For general information the first publication of this series should be consulted (Belkin and Heinemann, 1973. Mosq. Syst. 5:201-220). Any departure from the method of presentation in this publication is indicated below.

**PUERTO RICO
Codes PR,PRA,PRX**

The collections from Puerto Rico available for the project are identified by printed labels with 3 different codes: PR, for collections made especially for the project in 1964, 1970 and 1971; PRA for collections made in 1941, 1942 by various individuals and made available to us by T.H.G. Aitken; and PRX for miscellaneous collections accumulated at Johns Hopkins University chiefly by F.M. Root, and miscellaneous material accumulated by W.H.W. Komp, which was deposited at USNM. The 3 codes are treated separately below.

CODE: PR

The bulk of the material from Puerto Rico available to the project is identified by 1 of the following 2 printed labels: //PR [handwritten number for collections 1-28]/Puerto Rico 64-65/Mosq Mid Amer// or //PR [handwritten number for collections 90-1967]/Puerto Rico 70-71/Mosq Mid Amer//. Several numbers were not used in the numerical sequence and many collections are not included in the list because they are not significant.

We are greatly indebted to Dr. Jose Oliver-Gonzalez and Dr. Irving Fox of the Dept. of Medical Zoology, University of Puerto Rico, San Juan for their graciousness and kindness in arranging the housing for our survey group, providing us with laboratory facilities and obtaining transportation for us. We also wish to thank Dr. Jorge Chiriboga of the Puerto Rico Nuclear Center for the opportunity to visit the El Verde Field Station. Through the kind cooperation of Dr. George W. Miskimen, Dr. Chester G. Moore and William A. Haber of the Entomological Pioneering Research Laboratory, University of Puerto Rico at Mayaguez, we obtained much additional mosquito material from Puerto Rico which we gratefully acknowledge.

CODE: PRA

The collections under the PRA code bear the following printed label, with the handwritten part being indicated within [brackets]://PR[A collection numbers 1-73]/Puerto Rico/Mosq Mid Am//. The data for these collections as well as some of the material were made available to us by T.H.G. Aitken. We have assigned PRA numbers chronologically even to collections which we have not seen in the hope that they will be found eventually and that the data recorded for them by Aitken will be available. The data for all these collections are exactly as recorded by Aitken, with additions by us enclosed in [brackets]. In case material was available to us the identifications are ours and are given directly. In case we did not see the material the identifications were presumably made by Aitken and this is indicated by enclosure of the name within "quotation marks". In case there is good reason to believe that this identification is not correct, the probable identification made by us is given in [brackets] at the end.

VIRGIN ISLANDS
Codes VI, VIA

The collections from the Virgin Islands available for the project are identified by printed labels with 2 different codes: VI, for collections made especially for the project in 1965 by David D. Bonnet, in 1966 by Robert D. Walsh, Jr. and in 1969 by Melvin M. Boreham; and VIA, for a few collections made in 1942 by T.H.G. Aitken and A.A. Weathersbee. The 2 codes are treated sep-

VIRGIN ISLANDS

arately below but only code VI is provided with a Locality Index and a Species Index. In the location of a collection we have used the island (St. Croix, St. John and St. Thomas) as the primary political subdivision. The Universal Transverse Mercator Grid coordinates were determined for St. Thomas from map series E836, scale 1:25,000; and for St. Croix and St. John from map of West Indies 1:250,000 series E502, sheet NE20-5. They are given to the nearest 100 or 1,000 meters, depending on the accuracy of the available information and the scale of the map.

We are greatly indebted to D.D. Bonnet, M.M. Boreham and R.D. Walsh, Jr. for the field work in the Virgin Islands and to T.H.G. Aitken for making available to us the 1942 collections and the data accompanying them.

VI Collection Records

The bulk of the material from the Virgin Islands available to the project is identified by the following printed label: //VI [handwritten number for collections 1-29]/Virgin Islands 65 or changed to 6[6] or 6[9]/Mosq Mid Amer//. Collections 1,2,5-7 were made by D.D. Bonnet (D) on all 3 islands from 30 Nov to 7 Dec 1965; collections 8-16 by R.D. Walsh, Jr. (S) on St. Croix from 5 Jul to 5 Dec 1966; and collections 21-29 by M.M. Boreham (V) on St. Thomas from 28 Feb to 4 Mar 1969.

1. St. Thomas, Charlotte Amalie (KR958292), 10 m; 30 Nov 65, D. Large artificial container (55 gal drum) in domestic area; partial shade. *Ae. (S.) aegypti*.
2. St. Thomas, Nadir, near abattoir (LR014265), 5 m; 30 Nov 65, D. Pools in intermittent stream in forest; water temporary, fresh; deep shade. Also adults biting-landing on human in shade at 1500. *Ae. (O.) taeniorhynchus*, *Ae. (O.) tortilis*, *An. (An.) grabhamii*, *Cu. (Cu.) habilitator*.
