

EDITOR'S CORNER

This issue of *Mosquito Systematics* honors another distinguished British scientist, Dr. Peter F. Mattingly. During his exemplary career of over 40 years, he has made many notable contributions in mosquito taxonomy, ecology, genetics, morphology, evolution and mosquito-borne diseases. Dr. Mattingly has been a major contributor to *Mosquito Systematics*. He has published over 30 papers in this journal of which 29 were on the morphology and bionomics of the eggs of mosquitoes. These important papers on a very neglected stage of the mosquito life-cycle did much to enhance the prestige of the journal during its developmental years.
