

11. BLACKCROWNED FINCH-LARK, *EREMOPTERIX NIGRICEPS AFFINIS* (BLYTH) IN GUJARAT

There appear to be no records of the Blackcrowned Finch-Lark in Gujarat till the bird was recorded at Kuar Bet in the extreme north of Kutch in March 1960 during the course of the BNHS/WHO Bird Migration Study Camp. Subsequently Dharmakumarsinhji recorded the bird at Bhavnagar on 12th March 1962. On the 28-ii-69 Dharmakumarsinhji and myself saw a flock of these larks at Rajawadla Tank near Jasdan. I saw a flock on 14-iii-69 and single males on 6-iv-69 and 19-iv-69 at various widely separated places 12 to 20 miles from Jasdan. Dharmakumarsinhji saw the bird at Khodiyar Dam near Bhavnagar on 26-iii-69. The bird seems to be wandering down in winter from Sind and Rajasthan where it is resident and may possibly even breed in Northern Gujarat and Kutch.

13. OCCURRENCE OF THE ROCK LIZARD (*PSAMMOPHILUS* SP.) IN TIRUKKALIKUNRAM HILL, CHINGLEPUT DT., TAMIL NADU

The two species of the genus *Psammophilus* occur, according to Smith (1935), FAUNA OF BRITISH INDIA, Reptiles 2 : 208-210, at 'considerable altitudes' on hills in their distributional range in Peninsular India. I have also seen the species of the genus usually above 2000 ft., and was therefore surprised to see specimens of *Psammophilus* on the 500-foot high Tirukkalikunram Hill situated 50 miles south-west of Madras. I was also not aware of the occurrence of *Psammophilus* so close to Madras though *Psammophilus dorsalis* has been recorded from South Arcot.

14. DEFANGED COBRAS, HOW THEY SURVIVE

In July 1968, in Bangalore I met and spent some time with a 'snake-charmer' named Sayed Imam. He and his sons travel to Thailand, Viet Nam, Cambodia and Malaysia every year making their living mostly around the U.S. Military bases there. As the vast majority of snake-charmers do, he defangs the cobras he uses in his act. In his younger days he had been bitten a few times and had scars and a couple of misshapen fingers as evidence. He said that he would show me how he
