Catalogue of the Family Pandoridae (Mollusca: Bivalvia)

By KENNETH J. BOSS

Ichthyological Laboratory
Bureau of Commercial Fisheries, Fish and Wildlife Service
Department of the Interior, Washington, D.C.

The following catalogue was initiated during the preparation of a taxonomic revision of the family Pandoridae.¹ At the time of the completion of that manuscript, the catalogue was incomplete but of such magnitude that it was deemed worthwhile to carry it to completion. A work of this kind is primarily bibliographic and proceeds in a disconcertingly haphazard manner. The basic references, Sherborn's Index Animalium, the Zoological Record, and, in this case, the previous monographic work of Lamy, do not supply all the necessary information, nor do they incorporate all the specific taxa attributed to the family. It is by painstaking reference to original and subsequent literature and chance collation that a catalogue of this sort is compiled.

The presentation intends to include: 1) the generic, sub-generic, specific or subspecific name as originally introduced, 2) the original literature and date citation, 3) the type locality, including the geologic age in case of fossils, and 4) the whereabouts of the type specimens. Cases of taxa erroneously referred to *Pandora*, either originally or subsequently, are noted as not belonging to the family Pandoridae. Their correct systematic placement is indicated if known. If the type specimens

could not be found, they are listed as lost; footnotes cite the authority for some of these statements. The actual existence of every type specimen has not been corroborated if the original statement of individual authors or the subsequent remarks of Lamy (1934), or Sherborn (1940), present the necessary documentation.
