Note: According to state climatologist R. Lautzenheiser, 1996 was an extremely wet year with temperatures slightly below normal and sunshine well below normal. This was the ninth wettest year on record. January, July, and September were double the norm for precipitation, while October was triple the norm. The 9.99 inches that accumulated in October from the 19th to the 22nd was the second greatest rainfall on record and is considered a hundred-year storm.

The snowfall totaled 89.9 inches, which is more than double the past average for the year. This was due to the glut of snow that fell early in the year. At year's end, the new snow season had brought less than normal snow. January broke the snow record for that month, and it was the second snowiest month recorded in 106 years. Only fifty percent of possible sunshine was measured, down four percentage points from the average.
