

San  
July

forests which mantle the snow covered peaks farther south. I found *Phlox adansagensis* on a ridge south of Martin's Ferry. It next appeared twenty miles below Happy Camp growing low down, even along the river banks. Along Klamath Creek it is associated with *P. speciosa*, Pursh. and *Linnæa borealis*. *Silene campanulata* and *S. Hookerii* grow in great abundance along the Klamath. *S. antirrhinoides* is common. *Boschniakia* is very common. The Indians call it "The Squirrel's Grand-father." I found *Tarocodes* near the Siskiyou Summit. On the Illinois River I found four *Darlingtonia* boge, and on Smith River one which cannot be more

Dear Dr. Gray.

first place, I enclose  
for so long delay.  
My thanks for your  
letter of May the 2d;  
not tell how grateful  
for your offer of  
Of course, I very  
the Compositæ will  
and the Umbelliferæ  
~~as well as any thing~~  
will make the book  
ful to my pupils  
by your generosity  
ask of Prof. Gray  
with the Umbelliferæ  
you think he would  
willing to give.

I spent three weeks botanizing this year; during which time I traveled on foot over 370 miles of very rough mountain trails. The points in my route indicated on the map are Eureka, Arcata, Camp Garcon (in Hoopa Valley), Martin's Ferry, Orleans Bar, Happy Camp, Waldo (Oregon) Crescent City, Gold Bluffs, Trinidad, Arcata. I went to Hoopa Valley by a trail lying between the two taken last year and thus did not revisit the localities where I found the Newbryas last year. I wanted very much to cross the Siskiyous Mts. by a trail which leaves the Klamath near Cottage Grove, but an old "packer" who lives at the Grove said it would

probably be impossible to follow the trail of snow, and that since I was alone be a dangerous venture to attempt that recent city. I, therefore, took the Klamath Camp and crossed towns by the trail or and King took. From Waldo I branched off south of on road and thus of the Illinois and Rivers than Bridge but the forest trees like the dwarfs on road; so I had of learning any information about the possibility that grow in the

Bolander intends to make  
Guatemala his permanent  
home.

When may we expect  
another volume of your  
North American Flora?

Could you send me un-  
bound sheets of the second  
volume of the California Bot.  
any in advance of the publica-  
tion? I would willingly  
pay as much as for the  
bound volume for the sake  
of getting the book a little  
sooner.

Gratefully Yours.

J. P. Nattan.

than ten miles in
