

glad that Candy has turned up  
so well. If there is no impropriety  
I should like to further the genus  
or why not jointly Gray & Parry  
and or to escape name. If a  
better one does not suggest  
how will C. excisus do which  
will carry a sort of double meaning.  
Could we not get up a sketch  
figure, to accompany description?  
Candy would no doubt gladly  
pay for engraving. But at least  
we must not fail to raise from  
seed. I have a specimen to mail  
to Candy. Parcel to send soon

Yours truly  
C.C. Parry

San Bernardino Cal

June 25<sup>th</sup> 1876

My dear Dr. Gray

Your letter to  
the Flora! to hand. I am  
now in Mineral River.  
How nice to be able to find  
things without guessing, or  
going over a dozen or more  
little pamphlets.

Palmer just started off for  
San Luis Obispo. I suggested  
this intermediate locality  
which includes some high  
adjoining mt districts, where  
Abris tractata is found.  
I think seldom visited by  
collectors. Lemmon S.D.)  
not seem to take to the

Colorado scheme. which I suggested to him first and rather urged on him. he is active. but oversewed nervous & fidgety does not like to stick to steady work, and likes to make a display of what he does besides being short of funds. He is a thorough good fellow and I would like to see him do well. He is still at Sta-Barba, where you no doubt hear from him I fear wasting valuable time which would be better spent in the Sierra. I am likely to stay here till middle of July & then work north. expect to return to Sacramento early in Sept with all the collection including the Palms. who will come on later & make

up his sets there under my direction.

I think he will do well enough in collecting the Colorado Conifer. I shall give him very full directions in reference to localities & persons to call on. he will make head quarters at Austin. I hope this will be satisfactory to Sargent. he fully understands that the pay is to be proportioned to the size of the collection.

I have a parcel of Palms late gathering in hand to which I want to add a few large things. We shall have some correction & addition to the flora, among them we find Androsace leptostachys here on the foot hills. first seen by Lourteau
