

Herbarium Kew Gardens  
London, Nov 4<sup>th</sup>. 1884

Dear Dr Gray

Yours of Oct 13<sup>th</sup> is  
hand. I was in hopes that in  
getting clear of Compositae, you would  
be able to take a rest? or at least  
do only what you feel inclined to do.  
I shall be glad if you can help  
out the middle of Arctostaphylos, "in  
situ." I still think if the prostrate  
Wool-worm like species at San Francisco  
= A. pungens. A. pumila will have  
to be dropped, but I quite incline to  
accept A. Hookeri Don x. varialis Hook.  
as a good species. I think hybridism  
has done something to obscure the form  
of A. pungens, or more likely to confound  
A. glauca & A. formososa!

Well if you will go, let me sketch  
out a good winter campaign wa

i.e. Starting as soon in December  
as you can. via Washington & New Orleans.  
When in Washington do not fail to  
see Mr Genl Bidwell his address

1207 N. St. at her father J. G. Kennedy.  
Then on to New Orleans, taking in  
the industrial exposition, then via  
South Pacific route to El Paso, too  
early to botanize except to take in  
the general features of the scenery.  
Thence through South<sup>n</sup> Arizona. To  
Los Angeles. stopping over at Colton  
and notifying Parish to meet you  
and put you on the track of anything  
of interest near San Bernardino  
including by all means a drive  
to Dr J. D. B. Stillmans, at Laguna &  
the foot hills of San Bernardino range.  
Then to San Diego for comfortable  
winter quarters. which will have just  
enough botanical interest to keep  
you pleasantly occupied

Nov 4, 1884

I will only say still further that I am inclined to go back to your early opinion of Gymnogramma (Oxytheca luteola) and regard it as belonging to the bracteate involueral section, as the involueral segments are clearly not on the same plane (i.e. a regular whorl) But I see that I shall have to take up this whole involueral subject and have bothered you sufficiently at this time.

As special news here all very busy, now busy arranging books including Mr Bentham's loose papers. Sir Joseph has been kind enough to select a series for me including some of the older ones would it not be well for you to suggest something in the way of distribution in U.S.

In looking over some of Mr Boulton's  
addresses &c I am struck with  
admiration at his wonderful  
secrecy. I do not yet know  
what steps will be taken in  
regard to a memorial. but I  
think the matter is in progress  
You know the English move  
very slow & are not demonstrative  
but it is not only a few nights  
ago has spoiled the garden  
show, but the peonies are  
splendid

Enough for the present  
Yours truly

C. C. Parry

P.S. I note what you say in  
reference to Mr Shaw. but am  
ready to wait further developments  
L.R. V. sends a fl. of the curious Euphorbia  
shrub from Iowa Cal. which Dr Engelman  
indicated as a n. sp. Tetracoccus  
(I brought you some old fr. specimens)

Parry, C. C. 1884. "Parry, C. C. Nov. 4, 1884." *Charles Christopher Parry letters to Asa Gray*
