

We are having nice fall
weather no frosts yet
Mr Putnam inquiries affectionately
after you all

Barn Brdg
C.C. Parry

PS
I found copy of Symp Fl Part 2
but without autograph. So
I shall keep the latter.

Davenport, Iowa Oct 5th 1885-

Dear Dr Gray Home again at last
busy in putting away loose things
arranging notes &c.

Greene sends me his papers
& numerous specimens. Have
not yet taken time to examine
critically.

His new Pterotropis are clearly
R. macroptera Blth which he does
not seem to know

He still seems sore over

Erythrichium &c &c

I get a short line from J. Bigelow
announcing his return. and
hoping the republication will
soon go on, other matters to
be got -

I shall soon be taking up
Eriogonum of which I have
considerable material, as I think
I told you before. E. salsuginosum has
not a regular whorl involucrum
but a series of spiral bracts, nearly
as distinct as Nemacanthis, on
which Nuttall based his genus
Stenogonium. If Nemacanthis is to
be kept up, and cannot properly
include E. salsuginosum. I do not
see but Nuttall's genus must be
re-established. Though E. Divaricatum
is a connecting species, with a
regular whorl involucrum.—

Then it is a serious question
whether Oxytheca can be kept
up in the sense as better than
a sub genus ???

While on this point. You should
look again over Pringle's spring
plant. where one is curiously
passed over as Eriogonum?
but is quite a different
thing. A small scrap I brought
with me shows it to be a very
singular monpetk. with inferior
ovary. Two styles or inbreast corolla.
In fact I should hardly know
where to put it. (Rubractor)?
but you will see at once when
you get your eyes on it.

I hear nothing more of
Lemmon but we shall see
him soon as he has relatives
here. Pringle writes in excellent
spirits. "clement rains" &c &c
