

Davenport Iowa April 22^d/86

Dear Dr Gray

I have been
down to Pottersons (Ogawka) for a
few days. while there I had a
chance to look over Pringle's last
gatherings — (1885)

I infer from specimens, that you
reduce Perizyle aglossa = P. Parryi !
I see Pringle's specimens are sparingly
rayed. otherwise good P. aglossa. but
I can hardly think that P. Parryi
with its broad seriform leaf can be
the same, perhaps Harvard specimens
from near original locality — show the
original form — The best of the
original specimens of P. Parryi are
in the Kew Herb. — but then the species
were transposed and P. aglossa marked
P. Parryi & vice versa. What is the
real state of the case ?

Is there not a connection slip
to go at the end famipulatus
recapitulatus No far & Sp I please
send.

Have you heard of Greenes
last vagaries? Ex B.D. -
Embrace Romanism!!

Tomman send me such an item
in a California paper -

Orcutt has got well down into
Lower California. with good prospects,
"plenty of rain," I hope he will
pick up some good things and
clear up some doubtful ones.

Mr Curran was to make a 6
weeks trip into the Mojave - and
Erizomum will have to suffer.

Hope the warm weather will
bring you up.

Yours truly
C.C. Parry

Parry, C. C. 1886. "Parry, C. C. Apr. 22, 1886." *Charles Christopher Parry letters to Asa Gray*
