

We were all taken back  
at Brandegee marriage ! Hardly  
knowing whether to congratulate  
or pity !

You should be out  
here now to see the luxuriant  
vegetation. I never saw the  
country look finer.

I am half tempted to go  
back to West Colorado for a  
few weeks. The Juniper country  
I looked so inviting as I  
came through last month.

Yours truly  
C.C. Parry

Davenport Iowa Aug 2<sup>d</sup> 1885

Dear Watson

I am back again  
from California earlier than usual  
but the country was dry; up and  
I wanted to see something green.  
I have a little more light on  
the Ceanothus problem. I have  
seen C. Deltatus now by the score  
very distinct from C. papillosus. Though  
nearest to it, and not to be in  
any way confounded with my  
C. foliosus. It is my impression  
that the true C. Deltatus is confined  
to a limited district near Monterey.  
I also clear up to my own  
satisfaction) C. intricatus Parry,  
which seems not a rather common

Species on Mt slopes about San Joaquin  
bay was in Cultivation at Berkeley.  
I suppose it may have been confounded  
with C. Thysiflora or C. davaricatus  
but is in every way a good sp.  
I am now wrestling with  
C. Sordidus. The original  
description in B.R. Bradley is not  
very clear and succeeding authors  
have made it still blinder. I have  
an impression that the true type  
belongs to an upper Sacramento species  
which I have collected and studied  
this year and which is probably  
not rare in collections. Lemmon  
who collected in 1876 says he  
was returned to him an C. Thysiflora  
by you with an "it is a distinct  
rough species and of wt. C. Sordidus  
I shall have to name C. Lemmoni  
I suppose the type specimen

is only at Kew? and a  
direct comparison will be the  
only way to settle the question.  
Bolander No 4558 is a very  
different thing which I now know  
very well from a limited  
locality at Torre.

But of course you are busy  
with other things just now or  
better still taking a vacation.  
I again collected at Johnson  
Dioscorea buckleyana. The  
tree in early leafy condition.  
Please name the enclosed Atriplex  
from W Colorado which grows  
with A. Wolffii.

Greene I hear  
is in Montana climbing the  
high Mts. and of course finding  
lots of new sp.

Parry, C. C. 1889. "Parry, C. C. Aug. 2, 1889 [to S. Watson]." *Charles Christopher Parry letters to Asa Gray*
