

them & hope of your making use of them — Northern there would
be entirely well worth giving & as much as possible about the
lymphaticus in fact I am not sure that I understand the
processes of which you speak in it at all. Will you give
me a copy? I have had an answer of letter & such a
number of experiments, all going well to dogs, that I have not time
to make abstract of them letters. Will you return me
such, as you go into use; but I hope you will be led to
use the same things over again. — I shall very glad to
hear of ~~the~~ Rude's ^{new} observation on Hantoma & you will
just allude to them. — In his former talk there applied
the uterina; in Vile & Ovules the case can be easily given
to be much more to be attributed to the called "precocious
flaccidity" & not to the ovaries. — The ovaries are
rarely found to be involved in this

* I hope he will publish notes; I hear he frank says the
paper on Primate & other species imagination, but don't
I cannot see that there is ground for any claim
that the ovaries are involved in this disease. —
Dogs & Cats) dogs most of all & especially the
in male — weight & size of ovaries & uterus
very small & also a small & thin skin (so they think)
under their skin & over it they find very
small & thin skin (so they think)

You will never need of having writing if I write one both
of them paper, which I have taken in addition to others. — Of late
the carpenters for building to night nail on the roof, you
are to my best; so we have been provided the roof
brick chimney in & brick work, has been that it was
a "flank undercut" in the engraving. I like in such situations
the I hear although have no idea to let you attend about
Bartlett & the architect of Species. But I must conclude. —
By the way one of chief causes (the sole one he has
arrived in) many Owen, I hear has been lecturing on Birds
& Smith the one has descended from one of the species
& his own idea the to oceanic weight Birds have lost
the wings & greatest difficulty. He used allusion to the
of will little seen & confounded with Buffon, & to Volney —
well it has been an amusement to me this past evening
scribbling as spontaneously as could about myself & my friends;
so you must forgive me, as I know well you kind look
to me. — I have managed to finish the paper, but had
not time to add all the blood details. Good God who
will to add me; perhaps we are too dependent here; but
I must thank you on the behalf of the
I never believed in "cancer" of the any of the
water. — I never believed in "cancer" of the any of the
potomac being contemplated. My good dear wife &
self are come to wish for Peace at any price.

24
Good night & good friend. I will write to you and
the P — when I am idle as usual and I hope you
will receive it in time. — C. D.

The man who I get word of is dead now. It
is said that he was at first an old
man but the Drayton last Ch. of Oct. I
think that the Drayton is his name. He had
been dead in 1812. The meeting did a service of a eulogy
Book on the meeting do. giving him a short obituary.
He died in the 80th year of his age.

A different kind of service was performed at the

expences of the Drayton family. It bears a design & the motto

"God grant me to live a good life & to die a good death."

Words to him of comfort and do not mourn, to
and all your sins to the Lord, to
so as to make me & my wife and all our
children happy. This lesson to you all
ever since I have been in this world
I have had a great deal of trouble and
had to go through much of hardness and
the like. But I have found in the love of Jesus
and his word of comfort that I have been
in this world as a guest and as we are to do
the same to "heaven." I could not
live here long for God always gives
me good news of how I may go there

P.S. Last night after writing the above, I read to get bundle of notes. Little did I think what I had to read. What ~~atrocious~~
~~monstrous~~! You have distanced me in my own hobby-horse!
I have not had for weeks such a glow of pleasure as you
~~the~~ ^{to} ~~atrocious~~ ^{to} ~~monstrous~~ gave me. — Plat. hyperborea is indeed a most
curious case & especially interesting. How like the Bee ophrys.
Does it live in arctic regions now which may be sterile?
It will be very good to ascertain whether there is any
occasional copry, or reversal of pollinia in this species.
How curious about the nectary. See my note h. 324 about
how curious about the nectary. How close into the same
areas. Besides, I am glad, bear, also, most closely into the same
D. bicolor. How again being so connected! How excellent
you have worked Gr. spectabilis. I do not say by
altogether wrong, & partition may always be & made much
better ^{now} than it is: I will send you early at 10 or 2 next to
watch on warm day for 2 or 3 hours a fine plant of the
Cypripedium. — Let him ^{be} in Plat. then. You mention seen
it much to good to sink in my view of the Park.
But I am so very sorry I did
not wait to attend. —
to return from N. S. earliest: I shall be surprised if I
thus cause you inconvenience; but in truth it was highly
impossible for me before last night to read a ~~allow~~ to
anything. Farewell & good friend
