

YALE UNIVERSITY
BOTANICAL DEPARTMENT

Jan. 11. 1888.

My dear Watson. I have at last got
at your acrogens, have done up 9 pages
to day - through Woodwardia. The genus
Notholaena comes in - Mosouna becomes
Cryptogramme - Onodea is to swallow up
Struthiopteris, + Iridomanes will come in.
Shall the plates be changed to correspond?
About 12 ferns will be added - I have put
in Equisetum littorale as a species - & made
such little changes as seemed best. I can
not venture to alter Dryas much. will add
any new ones I find in underwood. Do you
believe that Salvinia has occurred in Missouri?
Shall it go in?

I send a composite from the Yellowstone -
it is out of flower, & I tried half a day to
make it out - but had to give it up. The habit
is so characteristic that perhaps you will
remember seeing it before. Can it be Aster
Shastensis? Coll. by R. S. Williams, Aug 24. 1888.

Yours very truly

Daniel C. Eaton
