

Dear Sir -

I am just in receipt of your  
note of Sept. 24, having just returned from  
the west. The package to which you refer  
has not as yet come to hand, but is probably  
in New York, in the U.S. Custom House - As  
soon as it comes I will have it sent to you -

Very truly yours

J. Allen

Mrs. Comp. Zoology,

Oct. 14, '73 -

R. longifolia — lvs. broadish at base, oblongly truncate or cordate — without glands. (lowest lvs. often? <sup>much</sup> orb or elliptic. All lvs undulate in our species than the foreign, the lower larger, and the valves more strongly nerved. —

R. Pabimbria — lvs. broadish above the base, sub-  
attenuate or subcordate — more or less gland-  
bearing. (achennium perhaps rather narrower  
in proportion ~~than~~ those of R. longifolia.) —

S.W. — Jan'y 1874.

Allen, J. A. 1873. "Allen, Joel A. Oct. 14, 1873." *Asa Gray correspondence*
