

Nashville July 18. 82.

Dear Dr Gray

Please accept my thanks for the copy
of your contributions to North-American
Botany and your kind remembrance
of my researches in the flora of Tennessee.
I have again this season on a few excursions
picked up several things new for me.
I also found a fine locality for *Eutophus*
which I formerly found in a couple of places,
near this City, but which does not exist
no more in that spot. I have not seen
it no more since 1866. I send you specimens
in flower, seedling plant and fruit. You
will see, it does not exactly agree with
the description in 5th Edit. Flowers are yellowish
~~root~~ not a cluster of tubers, but, while
young thick and aromatic, in the fruiting
state elongated spindle shaped. Biennial.
The *Prunus Pennsylv.* from the Thunder-
head has much narrower & longer leaves
than any specimens I saw before.

The *Ophioglossum* is *stoloniferum*.

The *Solidago* I can not make out.

The smooth, thickish, light green foliage
renders it very distinct in the field amongst
other species. I found no tall specimens

If it should prove to be something
interesting, I would take some pains
to obtain a set for Curtis. I have
never seen *S. Shortii*. The heads in
my specimens seem to be too small
for it.

Please and put one right about it.
The package goes with the same mail.

Yours very respectfully

A. G. Tillinghast M.D.

Gattinger, Augustin. 1882. "Gattinger, Augustin July 18, 1882." *Asa Gray correspondence*
