London April 15 1839

My Dear Friend

I began to be anxious to know something of your going on - when your letter reached me on Saturday and I am delighted to see what a good use you have made of your stay at Paris & thank you for all the information you give. - As for me I have little to say or rather but little time to say it I received a few days ago the long expected Heaths from Berlin and I saved from one of Humboldt's clearing several of my desiderata of Sabicey's *Erica cordifolia* & so that I am now finishing up and being obliged to write the whole out fair myself I get my work quite tired by the end of the day and cannot do much in the letter writing way. I have also gone on a little with the Mexican plants and found several genera and species very interesting from their connection with the Texas flora or with the Californian flora on the one hand and the warmer Mexican flora on the other. There is a new genus of Composite close to the Californian Agave - the Croton granitis Humboldt of a new genus of which we have a ? species in Douglas' Californian plants, the true *Triplium*

involution which is not the Californian one  
Krameria igne which as well as other Krameriæ I  
think I can show to be yet nearer Polygalæ than  
some appear to think - a demipodium close to the  
Arkansas one & I hope to print the greater part  
in the course of this month.

I certainly look forward some day to hunting  
for shorts with you on the Roan or the Great Smokies,  
but whether this can be next year I begin very  
much to doubt - however I make no plans so  
long beforehand.

W Brindley left most determinedly for  
New York by the Great Western - a what is now  
he has prevailed on his Uncle to follow him  
by the Liverpool on the 20<sup>th</sup> of this month.  
I trust the Great Western will have had a  
quid passage - as some little good to be derived  
from their persevering East Wind which  
being nothing but smoke and snow and  
frost and cold. Even the lilacs a hornbeam  
have not yet opened a single leaf - we have  
them generally almost in flower by this time.  
However they say it is all the better the flowers  
will not be nipped.

Our friend Boott to our great regret has  
had a severe attack of fever but is now pretty

well again - which is I believe the only  
personal news of our friends - The vessels  
for the Antarctic Expedition are commissed  
and young Jno. Hooke engaged - It waits I  
believe in July

This will be delivered to you by my  
mother or sister to whom I wrote three  
days ago - When you have seen them I  
should be very glad could you find a  
moment to write me a line or two  
about them

Yours very sincerely  
George Bentham

Mr. George Thompson  
of Manchester  
England
