

after the plan of Flora Moneypenny  
for the Australian colonies and here  
to send the first vol. to the printers  
soon after Xmas. Beside the splendid  
collection at Kew I have access to  
Brown's own through Bennett, those  
Precious from Hamburg and above  
all F. Mueller sends me gradually  
on loan the very rich collection he  
has gathered together at Melbourne  
so that there are of very few published  
species I do not see a sufficient specimen  
of Hooker is finishing up a most  
important paper on Meliaceae  
and is working hard at Jena.

My very kind remembrances  
to Mr Gray I do so wish something  
could occasion you to come over  
the Atlantic once more before  
Sir William and myself are gone  
from this world and of course  
bring Mr Gray with you I think  
our establishment at Kew is now well  
worth botanists coming some distance  
to see

Ever yours most sincerely  
George Bentham

London Oct 15/62  
- 62

My dear Gray

It is long since I have been  
intending to write to you but have  
always put it off not for want  
of taking the greatest interest in your  
going on - but merely from ever varying  
laying off to correspondence I feel as  
I grow old so great an anxiety to  
get on with the two great works I  
have in hand - The Australian Flora  
and my part of our Genera - which  
give me so much writing that I am  
very unwilling to sit down to letter  
writing - I must however thank  
you for all your kind notices of what  
we botanists do in this country - and  
for your pages from "Proceedings"  
which you so kindly <sup>and</sup> send me What fine work  
you make of Drude's Genera and  
species! - I do hope you will be able

to stick to Botany I want you not  
only to complete in some way a  
S. American Flora but there are  
so many things you would do so  
much better than any one else. One  
is to give us a general resume' of  
all that is now known of the fertilization  
and reproduction of Cryptogams.  
Hornemann's work just published by  
the Roy. Society is evidently a most  
important one - but it wants a  
general sketch for those who have  
not time to study all the details  
and you are too much up to the  
whole thing not to be able to give a  
clear idea of all that is operated in  
forty or fifty pages. - I do most  
nearly hope that your Government  
will soon make peace with the  
Southerns and be able again to do  
something for the encouragement of  
science.

Many thanks for your offer of  
disposing of a couple of dozen of our

Leaves which we will send you at  
trade price in a box & books  
properly making up for you shortly

I am shocked at the number of  
mistakes - more of copying than of the  
prep though some of the latter - which  
have crept into our Flora notwithstanding  
all the pains we took - some owing  
to having begun <sup>on</sup> a different place  
and thus having written some parts  
over and over again - such as Althaea  
for instance - amongst others the  
Bracteolaria b. 4 and 3. 1 of Althaea and  
Lavatera got transposed both in p. 197 and  
200 I had pointed out just as the copies  
were going to the binder, and corrected  
with a pen in every copy except the  
one which you had had in loose  
sheets in which I beg you to correct it  
also in your own copy pray make the  
corrections mentioned in the Addenda et  
Corrigenda There is also a bad one p. vi  
line 38 for adest read abest and even  
the comma after Menispermaeis.

I am doing Flora Australiensis
