S. palpiglossa corolla slender,
scarpis plicatis cimulque subblabatim
planus minus imbricatus. Stanhopea &
diphytoma cum specie minori sive
affecto v. decipiente

The link between the 4th and 5th
is Nicotiana on the one side and
Petunia on the other.

I think I wrote in my last that I
must keep up your *Chimarra* and
as a genus intermediate as it were between
Nyctalis and *Saracha* and the *hymenophora*
there is probably a tree *Nyctalis*

Your *Nottoctistium* is I think a good
genus connecting *Withania* with *Senecio*.

Saracha viscosa is an *Athenea*.

Withania is restricted to the Old world
Hypnoticum *sunneum* and *Withania* proper.

Your distinction of *Tubacum* and
Nicotia is very good but I think the
genus *Nicotiana* must include also
besides the *Nyctalis*, the *laimosanthus*,
which is not so different as I thought at

first and *Lehmannia* all if you like it
as sections, but making together a very
good genus.

Petunia and *Nierembergia* go of
course into *Calpignonidae*. Keep up your
checklist for the *B. erecta* which is your
plant and appears identical with
Nierembergia anomala Meisn and M.
stachys folia Schrad. *Rousettia procumbens*
G. L. is in every respect a true *Nierembergia*
~~the same as Jacobson n. 1450 and Dcayyan n. 63~~
but *B. erecta* has the corolla and stamens
of *Petunia* with the stigma of *Nierem-
bergia*. *N. lineifolia* Meisn is a genuine
Leptoglossis - striking this out *Nierembergia*
is a very readily distinguished and natural
genus. *N. anomala* DCN is compounded
of three; plant with the *Petunia* part
flora.

What is *Oryctes* L. Willd. which we
have not. It seems to me closely allied
to Wright's *Petas* 1502 (or 1692) not
quoted in Bob. Encyc. Egypt. and of course
it must be nearly allied to *Capsicum*
and *Watsonia* (the tree *Withania*) The

Bentham, George. 1875. "Bentham, George Feb. 29, [1875]." *George Bentham letters to Asa Gray*
