

the whole way to Kew about three days in
the week - I am also obliged for the present
to give up dining out and have had but a
dull Christmas time of it alone at home
a couple of days past in the first half of
December seemed to promise a severe winter
though about London (unlike the north)
it was not enough to allow any skating
and about a fortnight ago it suddenly
gave way to warm very wet weather
which has continued ever since

The Hodders have been spending
Xmas at the Hodsons in Gloucestershire
but return to Kew tomorrow. I will
mention to him what you say about
Mirabilis and *Bryophyllum*.

I have had some useful correspondence
with Hackett of Plotton on grammar at
which he has been working very carefully

25, WILTON PLACE.
London S.W.
Jan 1/83

My dear Gray

I was just taking up the pen
to write to you to express my anxiety to
hear something of you and Mr Gray after
so long a silence when your kind and
most friendly letter of the 17th Dec reached
me as a most welcome New Year's greeting.
I had heard of your accident but I very
soon also heard that you were getting the
better of it without any serious consequence,
and I had the pleasure of seeing your
handwriting in the direction of one or two
brochures - and only a few days ago of
your interesting account of the enormous

encrease of the known flora of N America.

I do hope that we may now see
material progress in your great flora

One thing prevented my writing
sooner was my anxiety not to interrupt
the preparation of the Genera *Malacium*
You will have observed by the sheets sent
to you that the printing has been steadily
going on since May at the rate of one
sheet per week - I cannot persuade the
printers to go on more rapidly - and after
the first proofs the process of revising
and printing off is rather a slow one.
The *Cyperaceae* are now almost all in
type and the *Gramineae* were sent to the
printers a fortnight ago so that we begin

to see the end. We add a few of the most
important Addenda et corrigenda to the
volume - We are urged to prepare a
Supplement to the whole work but that is
more than I can undertake as to my part
I believe that nearly 300 new genera have
been proposed as belonging to the first two
volumes, and some Order will require
much re-working for which I do not feel
at all disposed. I have no reason to
complain of my health considering that
I am in my 83^d year but I have lost much
within the last twelve months - a attack
of breath has grown much upon me and
since this winter has set in I find the
walk over Newbridge from the station
too much for me and I only drive down

and has been doing the *stadnixoxoxo*
for the great Flora Brasiliensis which I
trust will be a great improvement on the
other tribes so poorly worked up by Doell.
- but I cannot enter into Mackie's *gramineae*
speculations on the successive evolution of
different groups of *Pennisetum* species. On the
whole I admit that many good objections
may be made to several approximations,
and severances I have made in the
generic arrangement of *Gramineae*. - but
I have been unable to improve it without
giving rise to at least equally serious
objections.

With my warmest wishes that
you and Mr Gray may enjoy a happy
New Year in health strength and activity
believe me always
Yours most affectionately
George Bentham
