Dear Dr Watson:-

There can be but one opinion about "the book" of the new book: the perfect letter-press, the neatly arranged pages and the very careful proof reading are apparent at a glance and above criticism. But I could not be content with just looking at a new edition of the Mammal. And yet under the circumstances had it been almost any other work imaginable I fear I should not only have been perfectly content with a look - but even the sight of the wrapper would have sufficed. The price has got me down.

and if ever any poor drunkard getting over the effects of a hard spree has more of dizziness and nausea debility and frontal headache I should think a single experience would be enough to lead the reformation for life. But it is not once a year, nor once in ten years, that we have the pleasure of cutting the pages of a new ed. of Gray's Manual! So Mattie hauled a big stuffed chair up to the window for me. I got up from the lounge and settled myself in it and then stopped for a little while to get my breath and think. An elderly fellow said I to myself - prepare to be overwhelmed with confusion! Of late years you have been digging in a little paddock, not stopping often to look over the fence to see what the world's workers have been about in the broad fields beyond,

and in so doing fix in my mind  
the later nomenclature &c Bailey's  
*Carex* evinces a firm touch and  
evenness of treatment throughout  
which is a great improvement on the  
'Synopsis' of a few years ago.

If I have any fault at all to  
find with the excellent work of both  
yourself and Prof Corten it is that  
you carry brevity of statement to  
an objectionable extreme. For instance  
a group of species are known to inter-  
grade in the most confusing way.  
yet these species will be defined in  
their centres where they are more  
unlike as truly as possible and  
no words wasted to say that this is  
a treatment by bold strokes and  
does not faithfully report nature. As  
a consequence the young student  
finds a plant that agrees about as  
well (or ill) with one description as

You have read meanwhile a pretty  
steady stream of memoirs - papers &  
magazine articles in which pretty  
much every thing has been turned  
to other ends and spiced down  
and left in a toss until in the  
weakness and laziness of old age  
you have given up trying to "keep  
abreast with modern thought." The changes  
are far more not be able to tell a  
Greys Manual with all the modern  
improvements from a Flora of Humboldt.  
Then I begin cutting the pages -  
why - really this looks very much  
like the old book after all! The  
changes are far from being so  
formidable as I had anticipated  
they readily fit into the old knowl-  
edge. and I begin to think that  
by & by when I feel stranger I  
must post my herbarium to date

with two or three others and is naturally bewildered.

Is not Lycopodium leptostachys of Engelmann - not Gray.

Of course Botanist will take you to task for not accepting Hickoria and I shall expect friend Greene to fairly give you over as smitten in the depths of a depraved and hopeless conservatism!

Will this ed of '90 come to an eager and expectant group of middle aged naturalists such as welcomed the appearance of the book of '67. I doubt it! Will it help to arouse a fresh interest in breezy art. of our botany. I hope it may! It is very suggestive of the present trend of school education that finds in our high schools a

botanical laboratory <sup>and</sup> next door or  
Gymnasium - Every thing within  
four walls!

Yours very truly  
Dr. S. Babb
