

Cambridge
Feb. 23

Dear Mr Bartlett, 1899.

Your no. 1265, "small,
pink, gelatinous, on bark" I
do not find. Do you recollect
whether I told you that
it was Hypsilothora fragi-
formis etc.?

1042, on Diospyros. This was
not a fungus.

9130 on Crataegus Marshalli.
This was a Roestelia but
the perithecia only were
developed and the acidia
had not begun to show. Therefore
the species cannot be settled
although it may perhaps
be one of the forms put
in Roestelia lacerata.

1061. On Vaccinium arborescens
My recollection is that
this was Phytisma Vaccinii
An

1055. Impossible to say
to which of the three species
of *Rhytisma* of Schweinitz,
R. Pruni, *R. ilicinolum* and
R. velatum, this belongs. None
of them have been described
with mature fruit. Your
specimen is also sterile.
919. on *Glex opaca*. This is
apparently *Rhytisma*
Cartisii B. & Kar. but sterile.
892. On *Lycium*, Probably
R. decolorans Fr. but even
that species comes near
R. andromedae (Fr.) Fr. Your
892 however, is not typical
R. andromedae at any rate.
1573. I still think that this
is *Clavaria Botrytis*.
1559. I have not been able
to make out certainly
what this species is.

1048. *Colosporium*

Elephantopodis (Schw.) Heim.

1192. *Puccinia* *Canthii* Schw.

1056. *Cystopus*

Thomaeae-Panduranae
(Schw.)

1057 on *Brassica* } nothing
1193 " *Beta* } found

890. *Rhytisma acerinum*

1571. *Boletus Frostii*,

1560. *Stecium bicolor*

This as Lloyd says is
a fine specimen, better
than any of the species
in our Herbarium.

1556. *Boletus*. This

cannot be determined
without more notes
on living conditions

Bartlett, Harley Harris. 1909. "[Letter to Bartlett]." *William Gilson Farlow miscellaneous specimen lists : collectors A-B*
