

Dr. H. N. Dixon,
23 East Park Parade,
Northampton,
England.

Vermont I call F.
adiantoides.

No, I collected by Dr.
Kennedy also in Vermont
I cannot name. It does
not appear to be F. taxifolia
nor F. adiantoides
and I can hardly make
it fit F..

Cambridge
April 25th
1800.

My dear Sir,

I am much
obliged for your
Notes on my Bermuda
mosses. The specimen
of Pattia barbula
(of many synonyms)
certainly agrees with
a Cuban specimen
named by C. Mueller.
I ought to have
recognized it before
since it is enumerated
by Mitten in Helminley's
monograph of the

Plants of Bermuda collected
on the Challenger expedition.
The doubtful sterile
Trichostomum sort
of thing did not seem
to correspond to any
species given by Mitten
as far as I was able
to tell but I may be
mistaken.

Since you did not
refer to the *Gissidens*
Taxifolius sent from
Bermuda I infer that
you agreed with me.
I am, however, always
in doubt about the

species of that genus
and have collected
but few of them and
generally sterile. Enclose
five specimens about
which I should be
glad to have your
opinion.

No V. which is not
uncommon about
Boston in clay soils
on the borders of lawns
I have always called
T. taxifolius although
I have never seen it
in fruit.

No. IV from the moun-
tainous regions of

Dixon, H. N. 1900. "[Letter to Dixon]." *William Gilson Farlow miscellaneous specimen lists : collectors C-E* 500,
