

Lent to Lester March
1908.

Stemonitis trechis from
Call Thaxter = *S. fusca* Lester
Mycetozoa, p. 111.

Stemonitis marked
S. confusus. Galt
S. splendens var. *con-*
fusus.

Trichia contorta
marked 1, 2, & 3,

Stemonitis
choerova.

Chondrioderma testaceum.

" reticulatum

Craterium aureum

Physarum virescens

" pulchripes

Lamproderma arcyzionema

Hemitrichia Karsteni.

Oligonema nitens,

Lachnobolus occidentalis.

Stemonitis pallida, Tallulah Falls

" splendens, Jamaica

Ceratomyxa parvicaule

Arcyria stipitata.

Bodhanium magna

all but
calliclo
not in
herbarium
Lepidoderma

The following require comment.

Lepidoderma tigrinum, Bartlett

Mt. N. H. R. Thaxter. This appears
to be the same as the "Chondri-
derma form" previously sent
by me and mentioned in
Monog. Mus. p. 106. Notice the
Physar very large yellow
columnella.

Put in box marked Sept 23

Physarum (compressum)

Chocoma, N. H. 1907. This is the same as other specimens from the White Mts. sent you which I understood you to place in P. compressum but I may have misunderstood you. The stalk is calcareous throughout and one sees a central lime nucleus in some cases but not always.

An Cladonia, Chocoma.

This was growing in dry weather and I hoped that I had found something interesting. Unfortunately it would not ripen after gathering and is almost too immature to tell what it is. Can it possibly be a state of Badhamia rhizinoxa? I do not know Physarum rhizinosum but this does not answer to the description of that species.

Lister, Gulielma. 1908. "Sent to Lister March 1908 [Plant List]." *William Gilson Farlow miscellaneous specimen lists : collectors L-M* 50,
