

Needham, Mass., Apr 7, 1880

Mrs Meyers

Your letter finds me at home, where I have been for the past week under the Doctor's care. Nothing serious, however, only Nervous prostration & debility. The Doctor says, & orders me to keep quiet for two or three weeks.

So I am taking a rest and shall remain quietly at home for another week.

I send you two specimens of *C. viscida* today, and accompany this note with a copy of my paper.

In judging of it please remember that all detailed explanations were given while showing actual specimens & the paper was merely pencilled off as an introduction.

Thanks for the 2 papers on Insect-fertilization. I find them very interesting.

By the Bulletin

received today I see we have
two more additions & that
Lemmon has at last got his
name attached to a fern - North
Lemmonii. I recd a bit of
what I thought might be A. nives
from New Mexico some time ago
but as they were broken up
but I did not dare to say so.
I have the root growing and
may soon be able to tell

Please excuse this short
letter, I will do as you
wish about the others

Respectfully Yours
Geo. E. Warrington

Davenport, Geo. E. 1880. "Davenport, George E. Apr. 16, 1880 [to F.J. Myers]."
