Tavares M. 1999. — The cruise of the *Marion Dufresne* off the Brazilian coast: account of the scientific results and list of stations. *Zoosystema* 21 (4) : 597-605.

## ABSTRACT

From May 6 to June 2 1987 the *Marion Dufresne* obtained a large series of deep-water samples from off the southeastern Brazilian coast, oceanographic cruise TAAF MD55/Brazil. The MD55 collections include several new species and records from the southwestern Atlantic. Knowledge of the deep water fauna from that region has been broadened as a result of a series of reports published in the last ten years. An account of the scientific results published so far is presented herein.

## RÉSUMÉ

*La campagne du Marion Dufresne au large de la côte brésilienne : compte-rendu des résultats scientifiques et liste des stations.*

Du 6 mai au 2 juin 1987, le *Marion Dufresne* a réalisé une série d'échantillonnages dans les eaux profondes au large du sud-est brésilien : campagne océanographique TAAF MD55/Brésil. Le très riche matériel zoologique récolté, dont une grande partie reste encore à étudier, a donné lieu à une série de publications dans lesquelles plusieurs nouvelles espèces sont décrites et des nombreuses nouvelles répartitions sont établies. À la suite de ces publications, les connaissances sur la faune profonde de l'Atlantique sud-occidental ont considérablement augmenté. Un compte-rendu des résultats scientifiques publiés jusqu'à l'heure actuelle est présenté.

## MOTS CLÉS

## INTRODUCTION

Not surprisingly, knowledge on the Brazilian deep-sea fauna is still very fragmentary, as much of what has been published about the deep water fauna from that area is largely the outcomes of only a few expeditions conducted occasionally in the late nineteenth century. Three expeditions were responsible for all the deep-sea activities carried out in Brazil during the last century, they are as follow: *Hassler* (1872), *Challenger* (1873), and *Albatross* (1887). Together those three expeditions secured only 30 samples from the deep-sea bed (Tizard *et al.* 1885; Peirce & Patterson 1879; Townsend 1901), yet the *Challenger* reports are a *vade mecum* for those interested in the Southwestern Atlantic deep sea fauna. No major expeditions were organized to study Brazil's deep-sea macrofauna until 1987, when the *Marion Dufresne* obtained a long series of samples from depths down to 5155 metres. The cruise TAAF MD55/Brazil 1987 was conducted as part of a formal agreement between the Universidade Santa Úrsula, Rio de Janeiro, the Muséum national d'Histoire naturelle, Paris, and the Observatoire océanologique de Banyuls, Banyuls-sur-Mer, Laboratoire Arago, Université de Paris VI.

A detailed description of the cruise general characteristics can be found in Guille & Ramos (1988). Opportunity is taken herein to give an account of the scientific results published so far. Some of the references in the list of the scientific publications based on the MD55 collections were compiled by José Henrique Leal (Bailey-Matthews Shell Museum, Sanibel Island, Florida) and Virginie Heros (Muséum national d'Histoire naturelle, Paris).

## CRUISE PARTICIPANTS

### ABBREVIATIONS

CFR	Centre de Faibles Radioactivités, Gif-sur-Yvette;
INCM	Institut national des Sciences de la Mer, Cherbourg;
IST	Institut des Sciences de la Terre, Dijon;
MNHN	Muséum national d'Histoire naturelle, Paris;

MNRJ	Museu Nacional, Rio de Janeiro;
LA	Observatoire océanologique de Banyuls-sur-Mer, Laboratoire Arago;
SME	Station Marine d'Endoume, Marseille;
USP	Universidade de São Paulo;
USU	Universidade Santa Úrsula, Rio de Janeiro.

## CRUISE LEADERS

Alain Guille (echinodermata, LA) and Jeanete Maton Ramos (polychaeta, USU).

## PELAGOS

Guy Jacques (phytoplankton, LA), Kátia Araújo (phytoplankton, USU), Sauveur Belviso (chemistry, CRF), Paulo César Esteves (chemistry, USU), Frederico W. Kurtz (ichthyoplankton, USU), Michel Panouse (phytoplankton, LA), Claude Razouls (zooplankton, LA), Maria Luisa M. Schütze (zooplankton, USU), Silvia Maria Susini (hytoplankton, USP), Beatrice Tardet (hydrology, INCM)

## BENTHOS

Elaine F. Albuquerque (Crustacea, USU), Maria da Natividade Albuquerque (Echinodermata, USU), Maria da Glória Almeida (Ascidiacea, USU), José V. Andreta (Pisces, USU), Philippe Bouchet (Mollusca, MNHN, Paris), Nicole Boury-Esnault (porifera, SME), Bruno David (geology, echinodermata, IST), Nicole Gourbault (meiofauna, MNHN), Cordélia de Oliveira Castro Guéron (mollusca, USU), Marta A. Irving (sedimentology, USU), José Henrique Leal (mollusca, MNRJ), Bernard Metivier (mollusca, MNHN), Maria Alice de Carvalho Reis (polychaeta, USU), Marco Antônio Santos (pisces, USU), Bernard Seret (pisces, MNHN), Maria Helena C. Silva (pisces, USU), Marcos Tavares (crustacea, USU), Catherine Vadon (echinodermata, MNHN).

## TECHNICAL ASSISTANCE FROM TAAF

Yvon Balut (leader), Jacqueline Dubois (secretary), Jérôme Fourmont (electronics), Joël, Roche (electronics), Jean Savary (electronics).

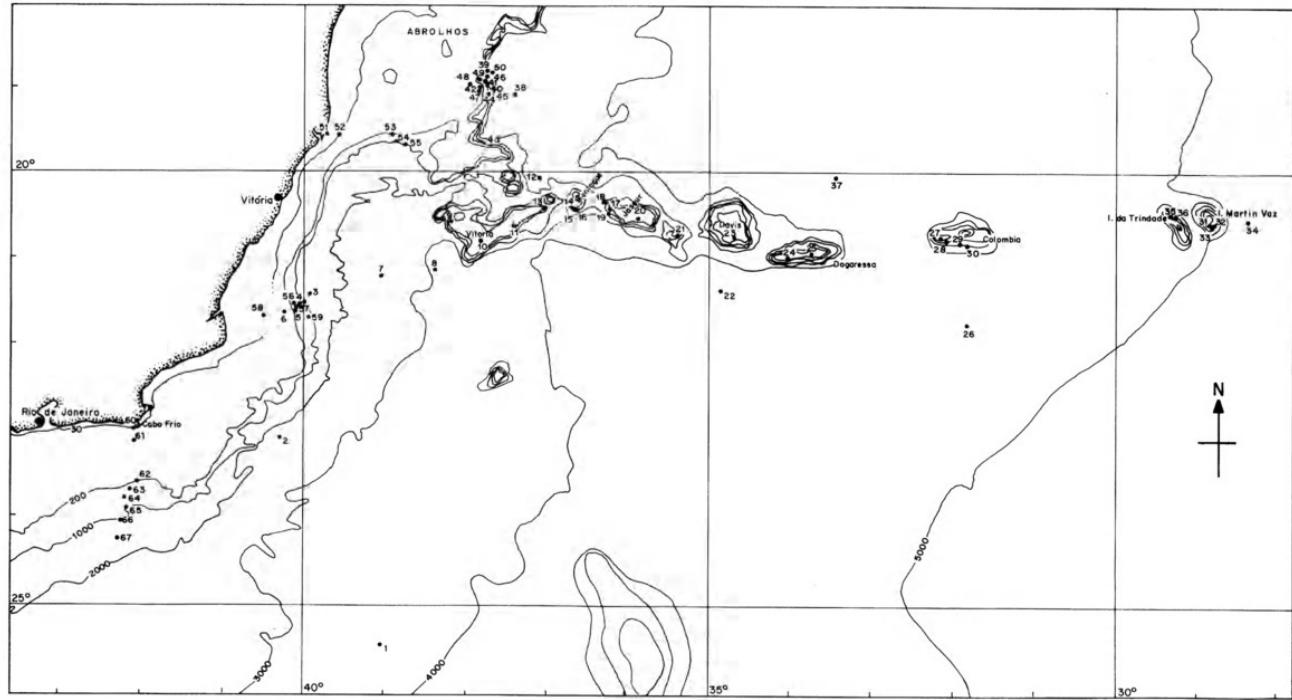

FIG. 1.—Area sampled by the *Marion Dufresne* in 1987.

## ITINERARY AND COLLECTING ACTIVITY

The *Marion Dufresne* departed from Rio de Janeiro on May 6 1987. Twenty-eight days and twenty hours were spent between depart and return to Rio de Janeiro on June 2. During this period, 3180 sea-miles were covered to survey 67 stations, where 108 benthic and 143 pelagic operations were conducted between 15 and 5155 meters depth (Fig. 1).

From Rio de Janeiro's harbour the *Marion Dufresne* headed south, straight to the abyssal plain (stn 1). Afterwards the ship moved northward to survey the abyssal plain and the continental margin south of Vitória (stn 2-8). The numerous oceanographic activities carried out in different depths along the seamounts of the Vitória-Trindade chain (stn 9-38) aimed primarily to study the faunistic transition with depth and the effects of insularity in deep waters. Additionally, a number of samples were obtained from the Abrolhos submarine canyons (stn 39-50). In order to compare faunistic transitions with depth on a isolated seamount and along the continental margin, two transects were performed near Rio Doce (stn 51-55) and Cabo Frio (Fig. 1, stn 60-67). While heading from Rio Doce to Cabo Frio, additional surveys were done on the continental margin south of Vitória (stn 56-59).
