

varieties of *Andropogon scoparius* supposed to grow
on grasses from N.Y. northward, plentifully, indeed,
along a railway. The rather local *Calamagrostis*
Pickeringii grows very near it at a low level, in
Lancaster. I hope another year to push up in
the region between Northumberland and Columbia, for
this is, as yet, practically unexplored. It includes the
towns of Northumberland, Shafton, and Columbia, and,
going up the Upper Annumance Valley, Staunton. I could
easily use Staunton as a center for work there.

I am sorry to be missing the Club with its opportunity
to meet old friends. Remember me to them, and
give the regards of Mrs. Prinn and myself to Mr. Deane.
I hope she is feeling strengthened by the summer.

Cordially yours,

Arthur Stanley Prinn.

1014, West Oregon Street, Urbana, Ill.

21 October, 1909.

My dear Mr. Deane:-

It is so long since I have heard
from you that I thought I would write just a line
to tell you how we are getting on. We found our house
filled high with boxes when we got here and have gradually
evolved order out of chaos so that it is now very
attractive. Our peach tree yielded us about 300
large and two small peaches so we had to can, eat,
and give away as hard as we could. I got time now

and then for a little collecting and got a lot of
composites and a few other things. Many were new
to me, such as *Rubria*, *Eclipta*, *Euphorbia yuccaeformis*,
Achillea, *Yucca elaeagnifolia*, *Lepidium tenuifolium*,
S. Asteriscus, *S. integrifolium*, *Pantanus integrifolium*,
various species of *Heliopsis*, *Liatris*, *Aster*, etc., etc. I now
have represented in my herbarium about 50% of the species
and varieties in the check-list of the Manual, 7th edition.

In the last part of my stay at Randolph
I made a fine trip down through a new trail
into the Great Smoky and found something extremely
close to *Juncus tenuis* var. *monanthos*. The real
thing I found at Dixville a couple of years ago.

When Aunt's must regretted that we couldn't get as you believe
I had for Co's Composites by the way. We shall have to do it
later. It is the only large collection still outstanding which
is likely to be used so much. Mr. Williams' about composites
little over a few new species for things; as to other species. I
think, not already known. The *Pantanus* you found is *Helianthus*
I got these year is known, and near is some *Helianthus* *leptopus* and
Pantanus *argutus*, the ~~form~~ *leptopus* new to our list. *Euphorbia* *serotina*,
found by *Papaver* *indianum* is *Helianthus*, I found this summer is a little
more by the *Andromeda* near the *Andromeda* *Helianthus* line. Some trip I
made with *Andromeda* and *Andromeda* *Andromeda* *Andromeda*, as I called
a type or new species is a very little studied. Among them were a

Pease, Arthur Stanley. 1909. "Pease, Arthur Stanley Oct. 21, 1909." *Walter Deane correspondence*
