

Randolph, 24 July

Dear Mr. Drake: -

Your letter and the copy of the Tanar  
map have come and I am delighted  
with the map and most grateful for your  
pains in getting it for me. In some respects it  
appears better than some more recent ones,  
especially for the Western North region, where  
Walker's map is rather vague. Cystopteris

fragilis and Alopecurus grac. var. austriatus  
are not infrequent in the country. Aspidium  
simulation we have not had. It is very inter-  
esting if you have it. I had thought of it as  
rather more coastal, I have been puzzled  
by some small Botrychium. I have had the  
impression that the junction of fertile and  
sterile segments was nearer the base in simplex  
than in ramosum. Some absolutely undivided  
things fit nicely into simplex; the private ones  
are more difficult. Habitat doesn't appear to help  
much though I can't recall getting any simplex  
in woods. Ramosum, or what is apparently it,  
grows in dry pastures, lowland. I suspect the  
whole group needs revision. H.L.F. once said ramosum  
did. It is getting interesting things in the Franciscas.  
Potent. Rothmannia and Vaccinia, like V. multiflorum of the  
Shinkshock, on Lafayette. With best regards to you  
all, A.S.P.
