

Sept. 25, 1924.

Dear W. D.

I have your note and the specimen which is undeveloped *Leocarpus fragilis*. The twig must have been close to the ground so that the plasmodium was able to run up on it before fruiting. Myxomycetes!

I wish you could have stopped over here on your way down. You never seen able to these latter days. My garden is a blaze with asters, lavender *Boltonia* 6-8 ft. (7-8 ft) etc. but the first frost has left its warning of what is coming on the edges of the squash leaves. The summer has gone & know not whether but even with my single eye I have got something done over and above chores. Ever Sincerely R.

Thaxter, Roland. 1924. "Thaxter, Roland Sep. 25, 1924." *Walter Deane correspondence*
