Dear Professor Collins:

I am very much obliged for the specimens of hepatics from Maine, Rhode Island and Canada. I have determined all except a very few and enclose a list by number. I was glad to see the *Riccardia palmata* from Maine. It had been reported from there but I had not seen specimens. The two numbers of *Lophozia inflata* are a little doubtful because sterile plants of this species simulate *Cephalozia fluitans* in a marked degree. I have referred them to *L. inflata* on account of their rather small leaf-cells, those in the *Cephalozia* being considerably larger. The *Gymnomitrium* is also interesting; Macoun does not list it from Quebec, although it is common enough on the high mountains of New England.

Very sincerely yours,

Alexander W. Evans.
