

GRAY HERBARIUM OF HARVARD UNIVERSITY,

BOTANIC GARDEN, CAMBRIDGE, MASS.,

Oct. 5, 1901.

My dear Collins —

I find in the Gray Herb.  
a specimen collected by Thunber  
in "meadows, Providence, August,  
1844" and marked by him  
Leontodon autumnalis. The  
plant is however, the European  
Leontodon hispidus differing  
from L. autumnalis in its  
very hispid leaves, naked simple  
scape and strongly hispid  
involucre. We have nothing  
else like it from America except

a tallast plant from New York city.  
A plant of this sort growing  
in meadows in 1844 ought to  
have spread by this time all around  
Providence. Do you know  
anything of such a plant? Or  
is it, like Thunberg's pink flowered  
Antennaria dioica for which  
we hunted, another spout?

Sincerely,

Merritt L. Farnas
