

13 Brown St. Providence

Oct. 11, 1923.

Dear Fernald:-

I have just run across
a "Dictionary of Altitudes" publ.
at Ottawa¹⁹⁰³ which gives the height
of Mt. Logan (authentic of Geol. Survey) as
3708 ft. Mt. Albert 3560 and Tabletop 4000.
This sets me to thinking, in view of the
fact that my aneroid read 400' upon
return to Ste. A. d. M., if it is possible
that my reading of alt. of Logan (3900) should
have been corrected downward instead of
upward. and the reading of 400' at Ste. A. d. M.
may be the result of setting the alt. scale on
an abnormal indication of barometer when
starting out from C.C.

Judging from a library index card
we have the Logan report of 1844 here but
so far I have been unable to locate it
either at Univ. Library or Geological Dept
will try again.

My photos are of little use for triangulation
as Logan, Fortin, Mattomisee are so nearly along
one straight line. I think I can work

out a tolerably good map from the photos, but not by accurate triangulation. J.H.

THIS SIDE OF CARD IS FOR ADDRESS

Prof. W. B. Fernald
