DEPARTMENT OF BOTANY

Feb. 24th, 1897. 189

Dr. George G. Kennedy,

Dear Sir,

I will send you some *Coscinodon Rauli* for comparison, with your specimen and from your description, I think your *Grimmia* must be *G. calyptrata*. That is the only one I know that has such a long awn to the leaf. Is there any description published of *H. Coleyanum*? because if it is simply a name, that would account for its not being cited. There are many of Muhlenbergs names in his catalogues which we cannot accept because there was no description published. I have sent for Dixon and Jameson for my own use. I was not at all well all last winter, and summer and had to give up much of my work. I neglected reviewing many articles for the Bulletin, and feel generally guilty and apologetic, but am improving now and trying to get caught up. I have a lot of Colorado Mosses from Brandegee of which I shall be glad to share with you., and Mr. Holzinger has been working on some collected by himself and Mr. Baker which he is issuing in sets. I have the first 50 here now. It is a region which needs more study and collecting, more than any other except the western plains (where there are none or next to none to collect)

cordially yours,

E. S. Britton.

Britton, Elizabeth G. 1897. "Britton, Elizabeth G. 24 Feb 1897." *George Golding Kennedy correspondence*
