

Epilobium coloratum

pubescence in lines of incurved
baris. Leaves distinctly pectinate.
No fruit to go by.

Lycopus sinuatus

Leaves incised, notice em-
spicuous sterile filaments
with globular tips!

Aster subulatus

That's what I meant
when I said centifolius.
Both are salt marsh Asters,
but so different.

Camb. . Friday Aug 16/12

Dear Dr. Reaney -

I never had a better time
than this morning and I
only regret that it wasn't
longer. I hope you got home
all right.

I never was busier than
I have been every second
this P.M., and most of the
evening, examining, listing
and putting what I wanted
into press - I have lists
from my box 26 marsh sps.
+ 2 Polygams from the
Coolidge Farm -

I will comment on a few
in any order just as they come:

Utricularia flexilis. That's it. I examined
under my compound microscope
the 1-celled Utr. Do it.

Sagittaria latifolia, ~~forma~~ basilata.
That narrow leaved form is
not enough for forma procelsa.

Alisma Plantago-aquatica.
not Saxifraga. I couldn't
think of the name.

Distichlis spicata

Couldn't think of the name.
First grass we picked.

Spartina glabra, var. pelosa

Scirpus campestris var. novae-angliae
the fine tall one. It has resp. and
a dense glomerular

Cyperus ferox ^{Scales overlapping;}
"What I thought
the old speciosus and
microscopicus. What I used
to get from Fresh Pond was
C. Engelmanni, scales, with
overlapping, and spikelets
sort of incurving (see figure)

Polygonum ramosissimum, var.
atlanticum. This is what I
make the tall one that I
thought was prolificum. Large
flowers, pedicels exserted,
height 1.5 m. I think it
must be that - I shall
send some to B & R. I will
examine again the specimens
I got some time ago which
I thought were prolificum. They may be.

16 Aug 1912
The two Polygonum of the
Coolidge Farm site are

P. pennsylvanicum

I don't think you took any.
Flowers not as many as I
am used to. A denser much
thinner than Papaveris-fulvum
pedicels & with stipitate glands.

P. aere. var. leptostachyum

The delicate red - bristles
agree in description and
comparison with herb. specimens.
It is surely an annual.
I have much of both

Sps. V. var —

Well, we did have a royal
time, and I'm well home.
It is always a treat to
get hold of you -

'Science' has come and
I have read a portion of
the article to Margaret
and we are extremely
interested in it. We are
now printing laws - It is
very readable and I
shall read it all
along - Thanks -

Then I can't get over your
losing another Pile.
It is a strange fate that
picked you out for 3 times.
You certainly are immense
now for the rest of your
natural life -

Give much love to
Mildred and tell her I
regret that she has
not such a successful
time.

Yours
Walter Deane
