

Washington D.C.
Dec 8th /89

My dear Deane:

I send you by this mail
one other Umbellifer folder containing
a number of new species. I have
ready another pack of new species.

I send you my notes of a proposed
new species and I wish your careful
consideration of them.

Very truly

J. W. Rose

Perennial: stem about 2° long, prostrate becoming erect, glabrous except at top (here a little pubescent): dichotomously branched; lower limbs then pedately parted, upper ones palmately: mouth oval, somewhat open, two lipped, entire (that is not toothed): "eye" blue, flowers ♂
Plate I (Now in the hands of Rice)

Habitat: On the banks of Deer Creek Carroll Co. Ind.

Collectors: Dr Marrow & Nurse Kearns
Aug 27/89

Remarks It is perhaps to be regretted that but a single specimen of this rare & beautiful Rose was collected and hence there can be no distribution. The specimen is kept in a Washington nursery where some very interesting physiological experiments are being carried on.

Return this letter from
Rose, when you write.
I think it is a very
good joke -

If need we propose the following name.
Rose(a) & Lims(i'a) non Pies Joseph n. sp.

Rose, J. N. 1889. "Rose, Joseph Nelson Dec. 08,1889." *Joseph Nelson Rose letters to Walter Deane*
