

was pronounced by Mr Bailey to  
be *B. cristata*, Schle. or *mirabilis*,  
Bott. (of Gr. Mass.) I have never  
collected that variety to my knowledge,  
nor seen it, though often hoping to  
do so. If you have a specm or  
two to spare of it, please add it to  
the good things which you have  
provided me.

I am glad that you enjoyed your  
visit here, & remember it so pleasantly.

The panel spoken of above will  
bear in the same mail with this letter,  
& will, I trust, reach you safely.

Please give our kind regards to  
Miss Deane, & tell her that my botani-  
cal madness is of old standing and  
a life-long love, so that she must  
bear with it patiently as Miss Monroe  
does.

Very cordially

Thomas Morong

Ashland, Mass. 18 Sept. 1885

My dear Mr Deane

Yours reached me this evening  
as I was preparing a package for  
you of some things that I found  
among my duplicates after you left  
day before yesterday, & for which  
you had expressed a desire.

The enclosed labels will tell you  
what they are. The *Solidago elliptica*  
is the one I spoke of as given me  
by Mr Faxon, and examined & iden-  
tified by Dr Gray himself, - no longer  
*S. elliptica* but *S. Elliottii*.

The *Carex praecox* you will be  
interested to know is from the original  
locality where it was first detected  
in this country by Mr Oakes. I had  
but few specimens, or I would have sent  
you more. I afterward found it in

great abundance around Purgatory  
Swamp. Between, & suppose I had  
many species from there, but I have  
not run across them yet.

The *C. lenticularis* & *C. mucicata* I  
thought possibly you lacked, & if so  
you would be glad to get them. I ran  
upon them in making up my package  
to Mr Bailey.

You will find upon the backs of the  
labels numbers corresponding to the  
numbers on the tags in the barrel.

I am delighted to hear that you  
have secured specimens of *Batatas* mul-  
titudes for me. I hope you will  
be able to obtain ripe fruit. What  
a place that "Waste Tap" is ! ! ! We  
shall get Bananas & Palms there  
yet ! and if there are any water  
in it, I should expect to find *Victoria*  
*Regia*. -

*Argemone mexicana* s. *aliflora*  
*approachii*, I think, no newer than  
*laevigata*. What ship brought it to  
Cambridge?

I hope you will succeed in  
finding *Aster Henryi*, as it has  
been for several years practically ex-  
terminated in its original locality,  
New Bedford. I suppose more than  
50 botanists have written to Mr  
Henry for it, but he and it all  
up long ago, and, of late, I believe,  
has never even answered the commun-  
ications respecting it. Mean re-  
member, if successful, that it is  
looking in my own Herb.

There is another thing also that I  
shall venture to draw on you for.  
If I remember rightly you told  
me that one of your species of  
Cane collected in Maine this year,  
New Hampshire?

Morong, Thomas. 1885. "Morong, Thomas Sep. 18, 1885." *Thomas Morong letters to Walter Deane*
