

Dear Anne.

In our article on *Leptis*
we want to show enlarged
flowers of ^{the} three species in order
to contrast the ~~star~~ sepals
and petals which are as
you know the distinctive
characters of the plants.
We can get *Leptis trifolia* without
trouble - *Leptis asplenifolia*
from Hooker. *Flores Boreali-Am.*
~~About~~ *Leptis occidentalis* we
have not secured as yet.
We have a fruiting specimen
but none in flower. Should
you secure the loan of a
flower press to show the
sepals and petals so
our artist can make
a drawing. We will

return it unharmed.

Nuttall's picture of the
plant is N. b. —
