

Verlag von **R. Friedländer & Sohn** in Berlin N.W. 6.

A. B. Meyer and L. W. Wilesworth
The Birds of Celebes
and
the Neighbouring Islands.

2 volumes, comprising 42 Plates carefully coloured by hand (Figures of 77 species), 3 plain Plates (Tails of 4 species) and 7 coloured Maps [3 Maps: Geographical Distribution of Loriculus, Cacatua, Bucconidae in the Indian Archipelago — 1 Map of Celebes — 1 Map of Celebes and neighbouring islands — 2 Meteorological Maps (Winds and Rains of the Indian Archipelago)] with letter-press of XXXII, 130 and 962 pages.

1898. In Royal Quarto.

Price 240 Mark [= 12 £ = fcs. 300.]

Sold separately:

The Introduction. XXXII and 120 pages, in Royal-Quarto. M. 20,—

Contents:

Preface. — Systematic Index [of species]. — List of Plates. — List of Maps. — Alphabetical list of Abbreviations. — Notanda et Corrigenda. — Introduction: Travel and Literature. Seasons and Winds in the East Indian Archipelago. Migration in the East Indian Archipelago. Variation. Geographical Distribution. — Systematic Part. — Alphabetical Index [of species].

After more than 6 years' incessant labour of both the authors this grand work has been completed.

The authors could avail themselves not only of the rich collections of the Dresden Museum, but also of the recent ornithological results obtained by the Drs. P. and F. Sarasin and many other travellers.

The Ornithological Fauna of the islands round Celebes till the Talaut Islands in the North, the Sula Islands in the East, and the Djampea Group in the South is incorporated in this work.

The 'Birds of Celebes' thus form a western continuation of Count T. Salvadori's famous "Ornitologia della Papuasie e delle Molucche".

We need not dwell upon the scientific value of Meyer-Wilesworth's work. For the Explorer in the East Indian Archipelago, for the Zoologist devoted to the problems of animal distribution and variation, for every serious Ornithologist it will be simply indispensable. As to the plates the name of the draughtsman and painter is sufficient to guarantee their perfection, and every possible pain in their execution has been taken to render them truthful.

The 42 coloured Plates

represent 77 species, none of which have as yet been figured. 3 of the figures are species of the order Accipitres, 1 Strix, 3 Psittaci, 6 Coraciæ, 3 Macrochires, 47 Passeres, 6 Columbæ, 2 Gallinæ, 4 Ralli, 2 Cloniiformes. The plates have been drawn after the original specimens and are coloured by hand by the well known artist Bruno Geissler of the Dresden Museum.

Meyer, A. B. and Wigglesworth, Lionel W. 1910. "The Birds of the Celebes and Neighboring islands." *The Emu : official organ of the Australasian Ornithologists' Union* 9(4), –.
