

NOTE

Transferral of *Polycentropus timesis* (Denning) Comb. Nov. from the
Genus *Neureclipsis* (Trichoptera: Polycentropodidae)

Polycentropus timesis (Denning)
comb. nov.

Neureclipsis timesis Denning 1948, Bull.
Brooklyn Ent. Soc. 43: 119, fig. 1 ♂.

Polycentropus picicornis.—Blickle &
Morse 1955, Bull. Brooklyn Ent. Soc. 50:
96–98 [New Hampshire specimens are *P.*
timesis].

Recent collections of caddisfly material collected at Spruce Hole, Durham, New Hampshire, via Malaise traps, May–June 1990, by Donald S. Chandler, yielded specimens of *Neureclipsis timesis* Denning (1948), a species that previously was only known from the holotype collected in Amherst, Massachusetts. Examination of the type and other specimens of *N. timesis* shows that the hindwing of this species has M with only two branches, revealing that this species does not agree with diagnostic characteristics of the genus *Neureclipsis* McLachlan, and on this basis it is transferred to the genus *Polycentropus* Curtis. Further examination of specimens from New Hampshire previously identified as *P. picicornis* by Blickle & Morse (1955), in the insect collection at the University of

New Hampshire, shows that these specimens are actually *P. timesis*.

This species is rather closely related to *P. picicornis* Stephens 1836, and differs in the male genitalia having preanal appendage with a long slender ventroposterior apical lobe and a short basodorsal lobe in lateral view, see figures of *P. timesis* in (Denning 1948) and *P. picicornis* in (H. Malicky, 1983, *Atlas of European Trichoptera*, The Hague). It is also noted that specimens of *P. picicornis* from Europe and western Canada exhibit slight differences in the male genitalia; the form from Canada was described by A. P. Nimmo (1986: 240–241, *The adult Polycentropodidae of Canada and the adjacent United States*, *Qaest. Ent.* 22).

I am grateful to Oliver S. Flint, Jr., Smithsonian Institution, for his helpful suggestions, Donald S. Chandler, University of New Hampshire, for providing specimens examined, W. Pulawski, California Academy of Sciences, for the loan of the type, and P. Perkins, Museum of Comparative Zoology, and A. P. Nimmo for providing additional material.

John S. Weaver III, *Department of Plant Biology, University of New Hampshire, Durham, New Hampshire, 03824.*
