CHECK LIST
OF THE
REPTILIA RECORDED
FROM THE
BRITISH TERRITORIES IN EAST AFRICA.
BY

ARTHUR LOVERIDGE, F. E. S., C. M. Z. S.

For the sake of brevity the references of all species appearing in the accompanying list which are also mentioned in Dr. G. A. Boulenger's "Catalogues", have been omitted, and for the others the only reference given is that of the publication in which the description of the species first appeared.

Those who desire keys to assist in the determination of the species are referred to Dr. Boulenger's "List of the Snakes of East Africa," 2. and the present writer's "List of the Lizards of British Territories in East Africa," 3. and "Notes on East African Tortoises." 4. The chameleons still require much study and considerable collecting on account of their local distribution. It is probable that many synonyms require eliminating from the present list of these creatures.*

Some 309 reptiles are recorded here as being found in the area under consideration; of these, 2 are crocodiles, 13 tortoises or turtles, 139 snakes, 114 lizards and 41 chameleons.

The distribution, as far as it is at present known, may be divided as follows:—

	Uganda.	Kenya Colony.	Tanganyia Territory.	Zanzibar.
Crocodiles.	1	1	2	1
Tortoises.	7	10	12	3
Snakes.	55	75	105	23
Lizards.	29	62	87	16
Chameleons.	11	13	27	3
	<hr/>	<hr/>	<hr/>	<hr/>
Totals.	103	161	233	46

- * 1. Catalogue of the Chelonians in the British Museum. 1889.
Catalogue of the Snakes in the British Museum. 1893-1896.
Catalogue of the Lizards in the British Museum. 1885-1887.
2. Proc. Zool. Soc. 1915. pp. 611-640.
3. Proc. Zool. Soc. 1923. pp. 841-863.
4. Proc. Zool. Soc. 1923. pp. 930-933.

Though Tanganyika Territory is much the larger area, I am inclined to think that it is rather because this region has been more thoroughly worked that the number of species recorded is so much greater than from the neighbouring territories.

The record of a crocodile for Zanzibar is based on the appearance of a single individual in a cave formed in the coral limestone cliff of the sea-shore. The event has been reported on by Dr. Anders, elsewhere. The reptile was doubtless washed out to sea from one of the coast mainland rivers during the rains.

ORDER EMYDOSAURIA.

CROCODILIDAE.
