List of charts	4
List of the dredging stations of the U. S. Fish Commission, 1871 to 1879	5
<i>Fish Hawk</i> , 1880 to 1882	43
<i>Fish Hawk</i> , 1883 to 1887	56
Report of the dredging stations of the <i>Albatross</i> for 1883	61
<i>Albatross</i> for 1884	65
<i>Albatross</i> for 1885	73
<i>Albatross</i> for 1886	81
<i>Albatross</i> for 1887 (up to November 1) ..	84
List of dredging stations occupied by Coast-Survey steamers, 1867 to 1880	85
List of dredging stations of the <i>Challenger</i> in the Atlantic, 1872-'76	101
<i>Travailleur</i> in 1880 and 1881	104
<i>Travailleur</i> in 1882	107
<i>Talisman</i> in 1883	108
<i>Washington</i> in 1881	114
Norwegian North Atlantic expeditions, 1876-'78	115
Swedish expeditions of Nordenskjöld, etc.,	
1875, 1876, 1878-'79	116
Danish Arctic expedition 1882-'83	120
British steamer <i>Lightning</i> , 1868	124
British steamer <i>Porcupine</i> , 1869	124
British steamer <i>Porcupine</i> , 1870	126
Notice of dredgings of the British steamer <i>Shearwater</i> , 1871	128
List of dredging stations of the British steamer <i>Valorous</i> , 1875	128
British steamer <i>Knight Errant</i> , 1880	129
British steamer <i>Triton</i>	129
Notice of dredgings of the Swedish frigate <i>Josephine</i> , 1869	130
Classified list of deep-water dredgings of the U. S. Fish Commission north of the Bahamas	130
Serial temperatures taken by the U. S. Fish Commission steamers <i>Speedwell</i> and <i>Albatross</i> , 1877-'85	133
Record of speed of five trawlings and soundings by the <i>Albatross</i> , July, 1883...	144

XXIX.—LISTS OF THE DREDGING STATIONS OF THE U. S. FISH COMMISSION, THE U. S. COAST SURVEY, AND THE BRITISH STEAMER CHALLENGER, IN NORTH AMERICAN WATERS. FROM 1867 TO 1887, TOGETHER WITH THOSE OF THE PRINCIPAL EUROPEAN GOVERNMENT EXPEDITIONS IN THE ATLANTIC AND ARCTIC OCEANS.

PREPARED BY SANDERSON SMITH.

PREFACE.

The records of the dredgings and trawlings executed by the U. S. Fish Commission from 1871 to 1879 were published in the Fish Commission Report for 1879 by the author and Mr. Richard Rathbun; those of the *Fish Hawk* from 1880 to 1882 in the Bulletin of U. S. Fish Commission for 1882, by Mr. Richard Rathbun; those of the *Albatross* from 1883 to 1886 in various volumes of the Fish Commission reports. The dredgings of the *Fish Hawk* from 1883 to 1887 and of the *Albatross* in 1887 have not yet been published.

Although separate copies were printed of the lists from 1871 to 1882, the scattered manner in which most of these lists appeared in various publications and associated with great masses of other material has rendered it very difficult to bring together a complete series of them.

The completion of the accompanying series of charts, on which all the dredging positions of the U. S. Fish Commission, the U. S. Coast Survey, and the British steamer *Challenger* in North American waters are laid down, has rendered it desirable to bring together and complete all these scattered lists, together with those of the Coast Survey and the *Challenger*. The opportunity has at the same time been taken to collect together the records of the dredging operations undertaken by the British, French, Italian, Norwegian, Swedish, and other European Governments in the Atlantic and Arctic, the results of which are of almost as much importance to us as of those carried on upon our own coasts. These are scattered through a great number of works in various languages, and many of them very difficult to find, and have in many cases never been reduced into the form of tables; so that the task of bringing them together and putting them into shape has been a somewhat

laborious one. It has been endeavored to present as nearly complete a set of these records as possible, but no doubt some will be found to have been omitted which ought to have been included. Excepting in the Arctic seas series consisting mainly of shallow-water dredgings, such as those in the Baltic, have not been included. Of other expeditions which have made important dredgings no lists, so far as is known, have ever been published. It will be noticed, also, that the amount of detailed information given in these lists varies very much, some giving only the position, depth, and kind of bottom, whilst others contain full particulars of temperature of air, surface, and bottom, drift, etc. They are here presented essentially as originally published, with some slight changes of arrangement for the sake of uniformity, and with foreign measures or temperatures accompanied with their American equivalents. The sources from which they were derived are, as a rule, stated, but with some exceptions.

A large part of the dredging positions of the Coast Survey were published by Professor Agassiz in the Bulletin of the Museum of Comparative Zoology at Cambridge, Mass. Those of 1867, 1868, and 1869 made by Count Pourtales have, however, been rendered definite by reference to the original charts and records in the Coast Survey Office; those of 1872, made by Dr. William Stimpson, have been added from the same sources, and a few other additions and corrections have been made.

The prefatory notes attached to each, both of the American and foreign lists, will render unnecessary any further explanation of their sources or peculiarities here.

The five large charts accompanying these lists require but little explanation. They relate only to the work of the Fish Commission, Coast Survey, and *Challenger* on and near our Atlantic coast, as it was not found practicable to publish at present charts illustrating the dredgings in other parts of the Atlantic and Arctic, although such have been prepared.

Every dredging made by the Fish Commission or the Coast Survey has been placed upon one or the other of these charts, except where the scale compels their omission or where the position was originally so indefinitely stated as to render it impossible to place it accurately. Of both these classes special lists are given on the charts, pointing out the nearest station which is placed on the chart.

A few words may be added to explain the special objects of the four small charts and sections placed upon the chart of the Caribbean Sea. The little chart of the Gulf of Mexico and the northwestern part of the Caribbean Sea serves to show parts of the Gulf not included on any of the large charts, to give additional contour lines, and to direct attention to the remarkable regions of deep water existing in both seas, and especially to that one marked as the Sigsbee Deep in the Gulf of Mexico. The bottom of this is almost a perfect plain, varying in depth over a

very large area only from 2,000 to 2,050 fathoms, as is shown by the east and west section across the Gulf, which is also given.

The three sections, from the Cultivator Shoal, or George's Bank, from Hatteras, and from Charleston, illustrate the general fact of the very gentle slope of the sea bottom along our eastern coast until the depth of about 100 fathoms is reached and of its very abrupt descent beyond that line, whilst they show the very different distances from shore at which this line is found.

The two sections showing the temperatures in the Mediterranean and the Caribbean Sea illustrate the fact that in a deep basin closed by a barrier of shallower soundings no change of temperature occurs from a depth corresponding with that of the barrier to the very greatest depths. In the Mediterranean the temperature found at a depth of about 120 fathoms, that of the Straits of Gibraltar, is about $57\frac{1}{2}^{\circ}$ Fahr. and does not vary to a depth of more than 2,000 fathoms, whilst in the Caribbean and Gulf of Mexico the deepest channel communicating with the ocean appears to be about 800 fathoms, corresponding to a temperature of $39\frac{1}{2}^{\circ}$ Fahr., and below this depth this temperature is invariably found down to 2,000 fathoms and more. The temperatures marked upon the section of the Gulf of Mexico illustrate this fact more fully.

The other temperature sections show the very rapid diminution of temperature from the surface and the very low temperatures reached in great depths.

As, after the preparation of the chart of the Carribbean Sea, the sections illustrating depths and temperatures were found, when reduced, to be too small for convenient use, enlarged copies of them are given as separate plates, numbered 5a, 5b, and 5c.

The tables of serial temperatures, taken by the *Speedwell*, *Fish Hawk*, and *Albatross*, afford the means of studying these changes of temperature in greater detail. These tables, like those of positions, have been scattered through numerous volumes, and, as requiring the aid of charts for their intelligent use, it has been considered best to bring them together in connection with these.

The hydrographic stations of the *Albatross* having been published for the most part by the Hydrographic Office as well as in the Fish Commission reports, and requiring only very rarely to be referred to by their serial numbers, the lists of them have not been reprinted.

LIST OF CHARTS,

- No. 1. Dredgings of U. S. Fish Commission in Gulf of Maine, Nantucket and Vineyard Sounds.
- No. 2. Dredgings of U. S. Fish Commission in Nantucket, Vineyard, and Long Island Sounds.
- No. 3. Dredgings of U. S. Fish Commission, U. S. Coast Survey, and *Challenger*, from Cape Canaveral, Florida, to the Grand Bank of Newfoundland and the Flemish Cap.
- No. 4. Dredgings of the U. S. Fish Commission and the U. S. Coast Survey in the Gulf of Mexico and adjacent parts of the Atlantic Ocean and the Caribbean Sea. The Florida Reefs are also given as a separate plate of enlarged size, numbered 4a.
- No. 5. Dredgings of the U. S. Fish Commission, U. S. Coast Survey, and *Challenger* in the Caribbean Sea and adjacent parts of the Atlantic Ocean.

[On this chart have been placed four small subsidiary charts and sections, as follows: (1) A small chart of the whole of the Gulf of Mexico, with additional contour lines. (2) A section from east to west across the Gulf of Mexico, with temperatures. (3) Several temperature sections in Atlantic, Caribbean, and Mediterranean. (4) Three sections of the sea bottom, commencing at the Cultivator Shoal, Cape Hatteras, and Charleston, respectively. For further explanations of these subcharts see the preface. In order to render these sections more convenient for use the second, third, and fourth are also given of about four times the size as separate plates, numbered 5a, 5b, and 5c.]

LISTS OF THE DREDGING STATIONS OF THE U. S. FISH
COMMISSION FROM 1871 TO 1879, INCLUSIVE, WITH TEM-
PERATURE AND OTHER OBSERVATIONS.

[Arranged for publication by SANDERSON SMITH and RICHARD RATHBUN.]

The following lists include all the recorded dredging stations made by, or in connection with, the United States Fish Commission, from its organization up to date. The stations are, for the most part, arranged chronologically, and are designated by four series of numbers or letters, as follows: One series of numbers, from 1 V to 87 V, with letters appended, represents the stations for 1871. The 1872 stations (in the Bay of Fundy) are designated by letters from *t* to *z*. Those for 1873 are indicated by a second series of numbers, from 1 to 212, with B. (*Bache*) or Bl. (*Bluelight*) added, according as the dredgings were carried on from the steamers *Bache* or *Bluelight*. In this series, however, are also included the stations of the *Bache* for 1872 and 1874, as well as those for 1873. The last series combines all the stations from 1874 to 1879, inclusive (omitting 1876, during which year sea-work was suspended), in numbers running from 1 to 769. For the sake of obtaining greater uniformity in recording the stations on charts, as explained further on, the stations for 1874 and 1875, originally numbered separately, have been united with those from 1877 to 1879, and given numbers following 1879. The numbers for these later years run as follows: 1874, from 400 to 580; 1875, from 600 to 769; 1877, from 1 to 128; 1878, from 129 to 238; 1879, from 239 to 378.

The stations of the *Speedwell* for 1877, 1878, and 1879 are indicated by numbers only, and are readily distinguished from those of the *Bache* and *Bluelight*, which have B. or Bl. affixed to them. In the following tables the localities given are taken from the original record books, whenever such exist (*i. e.*, for all the work of the *Speedwell* and much of that of the *Bluelight*—101 Bl. to 166 Bl.), with some other notes added to facilitate the finding of the localities on the chart. In many cases the positions were marked, at the time, on the steamers' charts by the commanding officer, and all such positions have been adopted, even though differing somewhat from those given by the record books. From the nature of the operations of dredging and trawling, it becomes almost

impossible to estimate exactly the changes of position caused by currents, etc., especially when out of sight of land, and in a few cases the positions were not placed on the charts at the time, and the bearings given do not suffice to fix them very accurately. It is believed, however, that but few positions are rendered uncertain to any great extent by either of these causes. A large part of the positions determined by the *Bache* were originally given by latitude and longitude. The other latitudes and longitudes given in the tables are intended to serve as the readiest means of finding the localities, all of which are either thus designated or are referred to as being near others which are so. The bearings given for the *Speedwell's* work in 1878 are true; the others, with a few (unrecognizable) exceptions, are magnetic.

In the last column of the tables the letter indicates the apparatus employed in dredging: D., Dredge; Ag. D., Agassiz Dredge; R. D., Rake Dredge; T., Trawl; Ag. T., Agassiz Trawl; O. T., Otter Trawl; Tan., Tangles.

STATIONS FOR 1871, IN AND ABOUT VINEYARD SOUND, MASSACHUSETTS.

During this, the first year of the Commission, the dredgings in shallow water were made partly from a sail-boat and partly from a steam-launch, and those in the deeper waters from the United States revenue-cutter *Moccasin*, Capt. J. G. Baker. The dredging stations numbered in all about 250, but to avoid confusion in laying them out on the chart, they were combined into 87 groups or lines, each including from 2 to 9 stations, the lines being designated by numbers, the stations by letters. In this manner they were represented on the large chart accompanying the Report of the United States Fish Commissioner for 1871-'72. In making up the present list the same arrangement has also been followed, and where all the stations of a group were of the same nature, they have been located collectively; otherwise the exact position of each station has been given.

Dates are not prefixed to all of the inner groups, as many of these include stations made on different days. Temperature observations (with Miller-Casella self-registering thermometers) were taken at most of the outer stations, as recorded in the list, but were omitted at the inner ones. The dredge was the implement most commonly used for scraping the bottom, but the beam-trawl was also frequently employed on the smooth inner grounds. The rake-dredge was worked a few times off Gay Head and the tangles very rarely, in only a few places. The characters of the many localities gone over in 1871, as well as the species of animals found inhabiting them, are fully discussed in the "Report upon the Invertebrate Animals of Vineyard Sound and the adjacent waters, with an account of the physical characters of the region," by Prof. A. E. Verrill; contained in the Report of the United States Fish Commissioner, Part I, for 1871-'72.

NOTE.—The serial numbers in this table from 1 to 87, inclusive, should be read 1 v, 2 v, 3 v, etc., to correspond with the charts upon which the positions are so designated.

Serial number.	Date.	Locality.	Depth in fathoms.	Nature of bottom.	Temperature.		
					Air.	Surface.	Bottom.
1	1371.	<i>a, b.</i> Off Little Harbor, Wood's Holl...	1½-2	Covered with eel-grass			
2	June 30	<i>a, b.</i> Off Little Harbor, Wood's Holl, between Nobska Point and Nonamesset Island.	2-3½	Rocky, small stones...			
3	July 11	<i>a, b, c.</i> Off Great Harbor, Wood's Holl, from south of buoy R. No. 4 to Great Ledge.	2½-9½	Rocks, gravel, &c.....			
4	June 30	<i>a, b, c, d, e.</i> Beginning nearly the same as No. 3 and extending to beyond buoy R. No. 2.	3½-12½	Rocks, small stones, &c			
5		Wood's Holl:					
		<i>a, b.</i> Southeast of Nonamesset Island...	3½-5½	Sand, gravel			
		<i>c, d.</i> Between Nonamesset Island and Great Ledge.	3½	Rocks, stones, dead shells.			
		<i>e.</i> Off Mink Point, Nonamesset Island...	8½	do			
		<i>f, g.</i> Mouth of Great Harbor.....	5½-9½	do			
6	July 20	Vineyard Sound:					
		<i>a, b.</i> Between Nobska Point and Falmouth.	2-3	Covered with eel-grass			
		<i>c.</i> Between Nobska Point and Falmouth.	3-5	Gravel and shells.....			
		<i>d.</i> About ½ mile south of Falmouth....	4½	do			
		<i>e, f.</i> Between Falmouth Harbor and Western end of L'Homme Dieu Shoal.	5½-9	do			
7		<i>a.</i> Lackey's Bay, Vineyard Sound.....		Covered with eel-grass			
		<i>b, c, d.</i> Lackey's Bay, Vineyard Sound.		Gravel			
8	June 30	<i>a, b, c, d, e, f, g.</i> Vineyard Sound, off Nonamesset Island and Wood's Holl.	7-10	Rocks, gravel, small stones.			
9	June 29	<i>a, b, c, d.</i> Vineyard Sound, south of Little Harbor, Wood's Holl, ½ to 1½ miles from Nobska Point.	7-12	Rocks.			
10	July 24	Wood's Holl:					
		<i>a, b, c.</i> Passages between Nonamesset and Naushen Islands.	1½-2½	Soft mud			
		<i>d.</i> Hadley Harbor	3½	do			
		<i>e, f.</i> Between Long Neck and Nonamesset Island.	3-6½	Hard gravel			
11		Wood's Holl Passage:					
		<i>a, b, c.</i> Off Nonamesset Island.....	3½-4½	Fine gravel, dead weeds.			
		<i>d, e, f, g.</i> Off Uncatena Island	3½-5	Sand, stones			
12		<i>a, b, c.</i> Wood's Holl Passage, between Long Neck and Nonamesset Island.	2½-5½	Sand, gravel			
13		<i>a, b.</i> Mouth of Great Harbor, Wood's Holl, from off Bar Neck wharf to midway between Mink Point and Parker's Neck.	1½-7	Gravel, &c			
14		Wood's Holl, in the passage-way to the east and south of Ram and Bluff Islands:					
		<i>a, b.</i>	3½-5½	Rocky			
		<i>c, d.</i>	2½-5½	do			
		<i>e, f, g.</i> In Great Harbor	5-10	Rocky, sand			
15		<i>a, b, c.</i> Wood's Holl, buoy No. 3, Middle Ledge to Lone Rock Spindle.	3-2½	Gravel, small stones, shells.			
16		<i>a, b, c.</i> Great Harbor, Wood's Holl, near buoys No. 12 and 14.	1½-14	Rocks			
17		Mouth of Great Harbor, from Bar Neck to east of Nonamesset Island.	1½-14½				
		<i>a, b.</i>		Mud and eel-grass			
		<i>c, d, e, f.</i>		Rocks, &c.			
18	July 24	<i>a, b, c, d.</i> Mouth of Great Harbor, from off Bar Neck wharf to midway between Parker's Neck and Nonamesset Island.	2½-12½	Hard gravel.			
19		<i>a, b.</i> Mouth of Great Harbor, between Parker's Neck and Lone Rock Spindle.	1-8½	Gravel, mud, weeds			
20		<i>a, b, c.</i> Mouth of Great Harbor, between Nonamesset Island and Parker's Neck.	1½-6½	Gravel, &c			
21	June 27 } June 28 }	<i>a, b, c, d, e.</i> Vineyard Sound, southeasterly from Nobska Point about ½ mile; all near together.	6-10	Rocks, gravel, small stones.			
22		Vineyard Sound, between Nobska Point and Falmouth Harbor.	4-5½				
		<i>a, b, c.</i>		Stones, dead shells.			
		<i>d.</i>		Sand, gravel			

Serial number.	Date.	Locality.	Depth in fathoms.	Nature of bottom.	Temperature.		
					Air.	Surface.	Bottom.
23	1871. June 30 July 3 July 8	<i>a, b, c, d, e, f.</i> Between Nobska Point and Falmouth, and south of Falmouth, about 1 mile.	4½-10	Gravel, small stones, shells.			
24		Vineyard Sound: <i>a, b.</i> About 1½ miles south of Falmouth. <i>c, d.</i> North of west end of L'Homme Dieu Shoal.	5½-10 5-13				
25		<i>a, b, c, d, e.</i> Vineyard Sound, between Waquoit Bay and Falmouth.	3-5	Sand, shells, eel-grass.			
26		<i>a, b, c, d, e.</i> Vineyard Sound; a line of dredgings parallel to No. 25, and from ¾ mile further south.	5-13	Gravel, shells.			
27		<i>a, b.</i> Vineyard Sound, about midway between the western part of L'Homme Dieu Shoal and the mainland.	5½-13	Sand, shells, eel-grass.			
28	July 20	Vineyard Sound: <i>a, b.</i> Off western entrance to channel between L'Homme Dieu Shoal and Hedge Fence. <i>c, d, e, f.</i> South of western end of Hedge Fence.	5-6 10-12	Sand, stones, sea-weeds Sand, gravel, small stones.			
29		<i>a, b, c.</i> Vineyard Sound; a line parallel to, and just south of, eastern half of Hedge Fence.	5½-12	Gravel, &c.			
30		<i>a, b.</i> Mouth of Vineyard Haven, between East and West Chop.	5-7	Sand, eel-grass, algæ.			
31	July 20	Vineyard Sound: <i>a, b.</i> Between Hedge Fence and East Chop. <i>c, d, e.</i> North of East Chop and off Vineyard Haven.	10-13 9-11½	Sand, gravel, small stones. do			
32		<i>a, b, c.</i> Vineyard Sound; line running east and west, north of eastern half of Hedge Fence.	11-12½	Gravel, &c.			
33		Vineyard Sound: <i>a, b.</i> South of eastern end of L'Homme Dieu Shoal. <i>c, d.</i> Southeast of same shoal.	5½-13½ 5-8½	do do			
34		<i>a, b, c, d, e, f.</i> Vineyard Sound, between eastern end of L'Homme Dieu Shoal and Wreck Shoal.	5-7	Gravel, hard mud, sand.			
35		<i>a, b, c, d, e.</i> Vineyard Sound; line running east and west between Wreck Shoal and 1 mile off Waquoit Bay.	4-7½	Gravel, shells.			
36		<i>a, b, c, d.</i> Nantucket Sound, between Wreck Shoal and Horse-Shoe Shoal.	4½-15½	Astrangia, sponges, &c.			
37		Vineyard Sound, off north side of Martha's Vineyard and nearly parallel with the shore, distant from shore ¼-½ mile: <i>a, b, c, d.</i> Between Martha's Vineyard and Middle Ground. <i>e, f, g.</i> Off West Chop. <i>h, i.</i> Off East Chop.	5-11 9-13 4½-9	Gravel, stones, rocks. Rocks, sand. Sand, stones.			
38		Vineyard Sound: <i>a.</i> About ¾ mile north of center of Middle Ground. <i>b, c.</i> Just off center of Middle Ground.	10-14 9½-13½	Gravel. do			
39	June 29	<i>a, b.</i> Vineyard Sound, about midway between Nobska Point and Middle Ground.	12-13½	Stones, gravel.			
40		<i>a, b, c, d.</i> Vineyard Sound, between Wood's Holl and Middle Ground.	10-13	Gravel, stones, sand.			
41		Vineyard Sound: <i>a.</i> About 1½ miles east of Nobska Point. <i>b.</i> About 1½ miles southeast of Nobska Point.	4½-6½ 10-12	Small stones do			
42	July 17	<i>a, b.</i> Vineyard Sound, off Tarpaulin Cove.	10½-15½	Gravel.			
43		Vineyard Sound: <i>a, b, c.</i> Line of dredgings off northern half of Naushon Island, parallel to shore, distant about ½ mile. <i>d.</i> Continuation of same, ½ mile off Nonameset Island.	10½-12½ 10½-11½	Gravel, hard sand. Gravel.			

Serial number.	Date.	Locality.	Depth in fathoms.	Nature of bottom.	Temperature.		
					Air.	Surface.	Bottom.
44	1871.	<i>a, b, c, d, e.</i> Vineyard Sound; line about parallel to last, off northern half of Naushon Island, about 1 mile from shore.	10½-15½	Gravel			
45		<i>a, b.</i> Vineyard Sound, off Quick's Hole.	6½-8½	Coarse gravel, shells			
46		Vineyard Sound, off the Elizabeth Islands.	7-14½				
		<i>a, b.</i> Off Pasque Island		Sand, shells			
		<i>c.</i> Off Robinson's Hole		do			
		<i>d, e.</i> Off south end of Naushon Island.		Sand, shells, and gravel			
47		<i>a, b, c, d, e.</i> Vineyard Sound, off west side of Martha's Vineyard, between Menemsha Bight and Cedar Tree Neck, ½ to 1½ miles from shore, and nearly parallel to it.	10-17½				
		<i>a, b, c, d.</i>		Black mud, dead mussels, &c.			
48		<i>e</i>		Sand			
		<i>a, b, c, d.</i> Vineyard Sound, same as last, ½-¾ mile from shore, and extending about 1½ miles both north and south of Cape Higgon.	4½-11	Sand, gravel, shells			
49		Vineyard Sound:					
		<i>a.</i> About northeast of Gay Head, 4½ miles.	7½-13				
		<i>b.</i> About west of Lucas Shoal, 1½ miles.	5-6				
50		<i>a, b.</i> Vineyard Sound, Menemsha Bight.	4-8				
51		Vineyard Sound, Menemsha Bight:					
		<i>a, b, c</i>	1½-2½	Mud, fine sand			
		<i>d</i>	4½	do			
		<i>e</i>	6-9	do			
52	July 14 } July 17 }	<i>a, b, c, d.</i> Vineyard Sound, north of southwestern extremity of Martha's Vineyard, ¾-1 mile from shore (<i>c, d</i> , off Menemsha Bight).	10-12	Sand			
53	July 14	<i>a, b, c, d, e.</i> Vineyard Sound, north and northeast of Devil's Bridge, Gay Head, ¾ to 1 mile from shore.	5-12	Sand, rocks			
54		Vineyard Sound, north of Gay Head:					
		<i>a.</i> About 1½ miles from shore.	16½	Mussels			
		<i>b.</i> About 2½ miles from shore.	14-15½	do			
55	July 22	<i>a, b, c.</i> Vineyard Sound, north of Devil's Bridge, Gay Head, ¾ mile.	6½-13½	Rocky, dead mussels, &c.			
56	July 22	<i>a, b, c, d.</i> Vineyard Sound, northwesterly from Gay Head, about 1 mile.	5-11	do			
57		<i>a, b, c, d, e.</i> About same position as last, forming a line about ½ mile further off.	5-13½	Rocky			
58		<i>a, b, c, d, e.</i> Vineyard Sound, northwesterly from Gay Head, 1½-2 miles.	10-16				
		<i>a, b, c</i>		Rocky			
		<i>d</i>		Mud, dead mussels			
59		<i>a, b, c.</i> Vineyard Sound, northwesterly from Gay Head, ½-1½ miles.	5½-11½	Rocky			
60		<i>a, b, c.</i> Vineyard Sound, northwesterly from Gay Head, 1-2 miles.	6-11½	do			
61		<i>a, b, c.</i> Vineyard Sound, northwesterly from Gay Head, 1-2 miles; more easterly than 60.	5½-13½	do			
62		<i>a, b, c.</i> Vineyard Sound, northwesterly from Gay Head, 1-2 miles; more easterly than 61.	5½-16½	do			
63		<i>a, b, c, d.</i> Vineyard Sound, north of Devil's Bridge, Gay Head, ¾-¾ mile.	6-8½	Rocks, sand, shells			
64	July 12	Buzzard's Bay, Cataumet Harbor:					
		<i>a.</i> In harbor	3½	Sand, eel-grass			
		<i>b.</i> At mouth of harbor.	3½-4½	do

STATIONS FOR 1872, WITH HEADQUARTERS AT EASTPORT, ME.

The dredgings for 1872 were mostly carried on from a large sail-boat; but those in the deeper waters of the Bay of Fundy were made from the United States revenue-cutter Mosswood, Captain Hodgdon. The regions explored were about as follows: Eastport Harbor, South Bay, and Passamaquoddy Bay, all of which are comparatively shallow-water areas; the shallow waters about the island of Grand Menan, especially those among the small islands to the east of Grand Menan; and the deeper waters east of Campobello Island, west of Grand Menan; and toward the center of the Bay of Fundy, between Grand Menan and Nova Scotia.

In connection with the shallow-water dredgings no complete record of observations was kept, but the collections made were appropriately labeled with the precise locality, depth of water, nature of bottom, &c. The more important hauls in deep water, mostly accompanied by temperature observations, are as follows, the letters used to designate them being the same as were employed in the original records:

Serial letter.	Date.	Locality.	Depth in fathoms.	Temperatures.		
				Air.	Surface.	Bottom.
t.	1872. Aug. 24	Bay of Fundy, off Grand Menan, beginning at a point 8 miles SE. by E. of north end of White Head Island, and running NE. for a distance of nearly 3 miles. (Temperatures taken at the beginning and close, and the same at both.)	106-90	°	°	°
u.	...do ...	Bay of Fundy, off Grand Menan, north of last; beginning 8½ miles E. of White Head Island, and extending about 2 miles SW.	96-100			37½
v.	Aug. 23	Bay of Fundy, E. of Grand Menan, about 2½ miles E. of north end of White Head Island.	28-52		53	39½
v'.	...do ...	Bay of Fundy, E. of Grand Menan, 1½ miles E. by S. ¾ S. of north end of White Head Island.	29			44
v.	Aug. 28	Grand Menan channel, west of Grand Menan Island; 2½ miles N. by W. ¾ W. of Southern Head, G. M.	40		48	45½
v'.	...do ...	Grand Menan channel, west of Grand Menan Island; 4½ miles NNW. ¾ W. of Southern Head, G. M.	54		47	40
v''.	...do ...	Grand Menan channel, west of Grand Menan Island; 6 miles N. ¾ W. of Southern Head, G. M.	55			40
w.	Aug. 16	Bay of Fundy, about 3½ miles east of Herring Cove Head, Campobello Island. (Soft muddy bottom.)	60			43
w'.	...do ...	Bay of Fundy, just off Herring Cove, Campobello Island.	27			46
x.	Aug. 2	Bay of Fundy, 2½ miles, about SE. of Head Harbor Light, Campobello Island.	90		48½	39½
x'.	...do ...	About 2½ miles ENE. of Head Harbor Light, Campobello Island.	77			42
x''.	...do ...	About 1½ miles NE. of Head Harbor Light.	30			46
x'''.	...do ...	Midway between Head Harbor Light and Spruce Island.	73		48	45
y.	Aug. 5	Passamaquoddy Bay, off North Harbor, Deer Island.	25		57½	47
z.	...do ...	Passamaquoddy Bay, 1½ miles north of last.	32		58	46

STATIONS FOR 1873, WITH HEADQUARTERS AT PEAK'S ISLAND, CASCO BAY, MAINE; AND ALSO STATIONS OF THE UNITED STATES COAST SURVEY STEAMER *BACHE* FOR 1872, 1873, AND 1874, IN THE GULF OF MAINE, ETC.

In this list the dredgings indicated by the above heading have been grouped together, as they appear on the chart prepared for publication. Numbers ranging from 1 B. to 78 B. were originally assigned to the *Bache* dredgings for 1873 and 1874, in papers published by Professor Verrill in the *American Journal of Science* for April, 1874, and June, 1875, and elsewhere. To these the dredging stations of the *Bache* for 1872, 18 in number, have been added, thus increasing the list to 97 B. As to the regular series of dredgings made by the *Bluelight*, under command of Lieut. Commander L. A. Beardslee, in and off Casco Bay, no serial numbers were given to the hauls until the commencement of the temperature observations, July 21. To the numbers (1 to 66), given to such of the subsequent hauls as were accompanied by temperature observations, 100 has been added (101 Bl. to 166 Bl.), and numbers from 167 Bl. to 190 Bl. have been given to the hauls from July 12 to July 21, and from 191 Bl. to 212 Bl. to those taken after July 20, but not included in the temperature series. The descriptions of localities from 101 Bl. to 166 Bl. are taken from the record books for temperatures, with some additions, and from 167 Bl. to 212 Bl. from the eight books of dredging lists, which were kept. Additions to 101 Bl. to 166 Bl., taken from the dredging books, are marked D. L.

The dredging stations of the *Bache* for 1872 were on and about Saint George's Bank and La Have Bank, and extended as far as Halifax, N. S.; in 1873 they were mostly in the Gulf of Maine, especially in the region of Jeffrey's and Cashe's Ledges, a few being made in Massachusetts Bay; those for 1874 were entirely in the Gulf of Maine.

DREDGINGS BY THE BACHE, 1873-Continued.

Serial number.	Date.	Latitude.	Longitude.	Locality.	Depth in fathoms.	Nature of bottom.	Temperature.			Apparatus used.

*The surface temperatures taken this year were quite unreliable, in consequence of an erroneous method of observation.

DREDGINGS BY THE BACHE, 1872.

(The letters preceding the serial numbers are the same used to distinguish the hauls in Smith and Harger's Report on the Saint George's Bank Dredgings (Trans. Conn. Acad., vol. iii), and in Professor Verrill's papers in American Journal of Science. The bottom temperatures this year are quite unreliable, manifestly too high in general.)

212 B1	(?)	43 29½	69 30	Cape Elizabeth, WNW. 30 miles	95	Muddy		T.

STATIONS FOR 1874 AND 1875, WITH HEADQUARTERS AT NOANK, CONN., AND WOOD'S HOLL, MASS.

In 1874, the headquarters of the United States Fish Commission were established at Noank, Conn., and the area covered by its dredgings included Fisher's Island Sound; the eastern part of Long Island Sound; Block Island Sound; and Gardiner's and Peconic Bays; and also extended some distance to the east, south, and southwest of Block Island. In 1875, with headquarters at Wood's Holl, Mass., dredgings were carried on in Vineyard and Nantucket Sounds; Buzzard's Bay; over a portion of Nantucket Shoals; to the southward of Nantucket Island and Martha's Vineyard; and also on and about Southwest Shoal. The dredgings were all made by the United States steamer *Bluelight*, Commander L. A. Beardslee, and a separate series of numbers, to designate the stations, was employed for each year. To facilitate the recording of all the dredging stations of the United States Fish Commission on charts, and to bring the southern ones into uniformity with those made to the north of Cape Cod in more recent years, and already recorded both on charts and in reports prepared for publication in a single series of numbers ranging from 1 to 378, 400 has been added to the 1874 dredgings and 600 to those of 1875. In this way all the dredging stations from 1874 to 1879, inclusive, are included in a single series.

The temperature observations recorded in the two following tables were mostly taken with much care. Former experiences had proved that the Miller-Casella thermometers were slow in acting, requiring from three to ten minutes (according to the depth of water) to obtain a correct reading, and they were, therefore, always left down a suitable length of time. The bottom and surface temperatures, in nearly all cases, were taken with Miller-Casella self-registering thermometers; occasionally a United States naval thermometer was employed for surface temperatures, and the same instrument was generally employed for the air.

STATIONS FOR 1877, 1878, AND 1879, WITH HEADQUARTERS AT SALEM, MASS., HALIFAX, N. S., GLOUCESTER AND PROVINCETOWN, MASS.

During these three years the dredgings were carried on from the U. S. Str. Speedwell, commanded in 1877 by Lieut. Commander A. G. Kellogg, in 1878 by Lieut. Commander L. A. Beardslee, and in 1879 by Lieut. Z. L. Tanner. In 1877, headquarters were first established at Salem, and the stations made from there covered the northern part of Massachusetts Bay, and portions of the Gulf of Maine, off Cape Ann. During the session of the commission of arbitration on the fishery claims, however, the headquarters were removed to Halifax, N. S., and dredgings were made in the waters off that coast, from the last of August to the first of October. The Speedwell also made a line of stations on her trip across the Gulf of Maine, from Cape Ann to Cape Sable, N. S. In 1878, with headquarters at Gloucester, Mass., the area dredged over included the northern and central parts of Massachusetts Bay, and the Gulf of Maine, off Cape Ann. In 1879, the dredging grounds were the southern part of Massachusetts Bay, and the Gulf of Maine, off Cape Cod. The bottom temperatures in 1877 were mostly taken with Miller-Casella self-registering, deep-sea thermometers, but in 1878 and 1879 Negretti-Zambra thermometers were used for that purpose. All the temperatures for 1879 were taken with more than usual care, the thermometers employed being frequently compared with a reliable standard.

DREDGING STATIONS OF THE U. S. FISH COMMISSION
STEAMER FISH HAWK, LIEUT. Z. L. TANNER COMMAND-
ING, FOR 1880, 1881, AND 1882, WITH TEMPERATURE AND
OTHER OBSERVATIONS.

[Arranged for publication by Richard Rathbun.]

In the summer of 1880, the headquarters of the United States Fish Commission were established at Newport, R. I., and the steamer Fish Hawk, then newly constructed, made its dredging and trawling trips from there, whenever the weather permitted. The field of explorations for the summer included Narragansett Bay, Sakonnet River, and the regions to the northward, eastward, and southward of Block Island. In September and the first part of October, three trips were made by the Fish Hawk to the inner edge of the Gulf Stream slope, between latitudes $40^{\circ} 05' 42''$ N. and $39^{\circ} 46'$ N., and longitudes $70^{\circ} 22' 06''$ W. and $71^{\circ} 10'$ W., in depths of 64 to 487 fathoms, resulting in the discovery of a new and exceedingly rich fauna, both as regards fish and marine invertebrates. On her passage to Washington in November, the Fish Hawk also trawled off the mouth of Chesapeake Bay, in depths of 18 to 300 fathoms.

During the summers of 1881 and 1882, the headquarters of the Commission were at Wood's Holl, Mass. As the shallow waters of this region had been quite fully explored by the Commission in 1871 and 1875, very little time was expended in work near land; but advantage was taken of all pleasant weather to still further investigate the rich faunal region of the Gulf Stream slope, discovered the previous year. Seven trips were made to this region, in 1881, between latitudes $39^{\circ} 40'$ N. and $40^{\circ} 22'$ N., and longitudes $69^{\circ} 15'$ W. and $71^{\circ} 32'$ W., in depths of 43 to 782 fathoms. A line of dredgings and trawlings, at intervals of about four miles, was made from off Noman's Land to the Gulf Stream slope, in order to connect the inshore with the offshore stations; and a few trips were also made in Vineyard Sound, Buzzard's Bay, and off Chatham, Cape Cod, on, and in the vicinity of, Crab Ledge. Cod trawl-lines were set on most of the outside trips, for the purpose of catching fish that would not enter the beam-trawl.

In 1882, five deep-water trips, were made to the same region, extending the area of dredgings considerably beyond its former eastern and western limits. A few hauls of the dredge and beam-trawl were taken in Vineyard Sound, and one trip was made to the one-hundred fathom line, off the eastern side of Cape Cod. The most eastern haul on the Gulf Stream slope for 1882, was in latitude $40^{\circ} 08'$ N. and longitude $68^{\circ} 45'$ W.; and the most western in latitude $39^{\circ} 31'$ N. and longitude $72^{\circ} 03'$ W.; the deepest haul was in 787 fathoms. Cod-trawls were set on two of the trips only.

The temperatures of the air were taken, in part, with a Jas. Green, in part with a Signal Service; thermometer; the temperatures of the bottom and surface waters were obtained by means of Negretti and Zambra deep-sea thermometers. The bearings are all magnetic. As the bearings and latitudes and longitudes indicate only the points at which the dredge or trawl was lowered upon the bottom, the direction of the drift of the vessel and the distance gone over in dredging and trawling have been given in most cases, to show the extent of the hauls. The figures in the column of "Drift" indicate the distance of the drift in miles. The abbreviations in the column of "Apparatus used" have the following significations: D., dredge; R. D., rake-dredge; O. D., oyster-dredge; T., trawl; O. T., otter-trawl; B. T., Blake-trawl; Tan., tangles; C. T., cod-trawl.

The New York fishing schooner, Josie Reeves, Capt. F. M. Redmond, employed by the Fish Commission to look for the tile fish (*Lopholatilus chamaeleonticeps*) in the neighborhood of the one-hundred fathom line, south of Martha's Vineyard, made five stations in that region, which for convenience sake have been given numbers in the regular series from 1145 to 1149, inclusive. She used cod trawl-lines and lobster-pots.

Dredging stations of the steamer *Fish Hawk* for 1880, 1881, and 1882.

REPORT OF DREDGINGS OF THE ALBATROSS FOR 1883, BY LIEUT. SEATON SCHROEDER, U. S. N., NAVIGATOR.

The cruising of the *Albatross* during this first year of service has been included between the parallels of 35° and 45° north latitude and the meridians of 64° and 77° west longitude. The number of days under way, the object of each trip, and the distances performed are given in the following table:

Date.	Object.	Miles.
December 30, 1882, to January 3, 1883.	Wilmington, Del., to Washington, D. C.	339.4
February 10 to February 14.	Washington, D. C., to Wilmington, Del.	391.9
March 21 to March 25.	Dredging	425.4
April 24 to May 9.	Dredging and investigating migrations of mackerel.	1,476.6
May 19 to May 29.	do	1,025.1
June 17 to June 19.	New York to Washington, D. C.	426.1
July 6 to July 14.	Investigating migrations of mackerel and menhaden.	816.2
July 18 to July 21.	Dredging	446.6
July 25.	Newport, R. I., to Wood's Holl, Mass.	40.0
July 26 to August 3.	Dredging	682.3
August 7 to August 10.	Investigating migrations of mackerel and menhaden.	423.3
August 12.	Newport, R. I., to Wood's Holl, Mass.	40.0
August 13.	Wood's Holl, Mass., to New Bedford, Mass.	24.0
August 18.	New Bedford, Mass., to Wood's Holl, Mass.	24.0
August 21 to August 25.	Investigating migrations of mackerel and menhaden.	951.1
August 29 to September 7.	Dredging	859.5
September 11.	Wood's Holl, Mass., to New Bedford, Mass.	24.0
September 13.	New Bedford, Mass., to Wood's Holl, Mass.	24.0
September 20 to September 22.	Dredging	263.5
September 30 to October 5.	do	586.7
October 11.	Wood's Holl, Mass., to Newport, R. I.	40.0
October 17 to October 19.	Investigating migrations of mackerel and menhaden.	286.5
October 22 to October 25.	do	411.7
November 5 to November 14.	Dredging	1,020.3
December 28 to December 29.	Washington, D. C., to Baltimore, Md.	180.0
Total, 121 days.		11,228.2

I.—Dredging and trawling record, U. S. Fish Commission steamer Albatross, Lieutenant-Commander Z. L. Tanner, U. S. N., commanding, season of 1883.

ABBREVIATIONS FOR KINDS OF BOTTOM.—C. for clay; g. for gravel; m. for mud; oz. for ooze; p. for pebbles; s. for sand; sh. for shells; sp. for specks; st. for stones; blk. for black; brk. for broken; bu. for blue; crs. for coarse; dk. for dark; fine. for fine; glob. for Globigerina; gn. for green; gy. for gray; wh. for white; yl. for yellow.

REPORT OF DREDGINGS OF THE ALBATROSS FOR 1884, BY LIEUT. SEATON SCHROEDER, U. S. N., NAVIGATOR.

During the year 1884 the geographical limits of the cruising of the *Albatross* were the parallels of $8^{\circ} 30'$ and 43° north latitude and the meridians of $61^{\circ} 30'$ and $85^{\circ} 30'$ west longitude. The number of days at sea and the distances run, together with the object of each trip, are given in the following table:

Date.	Object.	Distance.
		<i>Miles.</i>
January 6 to 7	Baltimore to Norfolk	163
January 10 to 17	Sounding trip	1, 417. 5
January 24 to 30	Sounding and dredging trip	660. 2
February 2	Swinging ship	20
February 3 to 11	Sounding and dredging trip	1, 209. 4
February 18 to 26	do	1, 100. 8
February 27 to March 1	do	333. 8
March 12 to 16	do	605. 1
March 22 to 26	do	429. 4
April 2 to 5	do	253
April 9 to 15	do	813. 1
April 29	Key West to Havana, Cuba	100
April 30 to May 7	Sounding and dredging trip	603. 8
May 11 to 17	Sounding trip	1, 279. 5
May 13 to 14	Washington to Norfolk	174
July 20 to 26	Investigating migrations of menhaden and mackerel	651. 7
July 31 to August 8	Dredging trip	486. 4
August 19 to 25	do	429. 2
August 27	Wood's Holl to Newport	42
August 28 to 31	Flagship of Honorable Secretary of the Navy	47
September 1	Newport to Wood's Holl	42
September 6 to 15	Dredging trip	943
September 25 to 29	do	424. 1
October 8 to 9	Wood's Holl to New York	189
October 17 to 23	Dredging trip	797
December 25 to 26	Washington to Norfolk	174
Total, 134 days		13, 388

The number of soundings taken during the year was 701, almost all of which were located with sufficient accuracy to be of hydrographic value; of these, 194 were also dredging stations.

During the winter and spring the vessel was employed in hydrographic work for the Navy Department; searching for reported dangers in the West Indies and between there and the Chesapeake; running lines of soundings across the Caribbean Sea and among some of the islands; taking serial temperatures and noting surface currents; making an examination of a part of Savanilla Bay, United States of Colombia, and establishing the longitude of Cape San Antonio light-house, Cuba.

Following is a list of reported dangers over or near which the depths were found in the positions given:

List of reported dangers.

Name.	Latitude north.	Longitude west.	Depth.
	° ' "	° ' "	Fathoms.
Orion Shoal	34 48 45	72 25 00	2,462
Ashton Shoal	33 50 20	71 42 00	2,953
Perseveranza Shoal	31 15 42	67 39 10	2,787
Mourand Shoal	24 35 14	65 13 07	3,006
Leighton Rock	17 39 30	73 22 15	2,490
Loos Shoal	17 48 00	73 34 15	2,369
Breakers	12 54 40	66 11 10	2,768
Vigia	12 10 30	66 11 00	2,707
Georgia Shoal	Many soundings.		(Least) 17
Tribune Shoal	12 11 30	74 27 30	2,057
Powhatan Shoal	11 11 00	75 50 30	1,195
Doubtful	14 53 40	80 20 00	1,151
Sancho Pardo Shoal	Off Cape San Antonio.		Many.
Albatross Shoal	22 49 20	84 15 00	950
Vigia	23 06 00	83 03 45	625
Huntley Shoal	30 46 00	78 35 00	470

The soundings were such as to prove the non-existence of all except the Georgia Bank off the east end of Jamaica, which had been recently searched for by several vessels. It was originally discovered by Capt. John S. Holt, of the American brig *Georgia*, in 1867, who reported 14 fathoms in about latitude $17^{\circ} 46'$ N., longitude $75^{\circ} 45'$ W. An extensive and careful search was made for this, resulting in the discovery of a bank with a least depth of 17 fathoms a little to the southward of the reported position, in latitude $17^{\circ} 36'$ to $17^{\circ} 44'$ N., longitude $75^{\circ} 40'$ to $75^{\circ} 45'$ W. The Navy Department has given it the name of Albatross Bank. This must not be confounded with the Albatross Shoal off the northwestern shore of Cuba, which was reported by the German gunboat of that name and not subsequently found.

One hundred soundings were taken off Cape San Antonio, extending to just beyond the range of the light, with deep water everywhere (up to 1,200 fathoms), and Sancho Pardo Shoal has, in consequence, been expunged from the charts of the Hydrographic Office, Navy Department.

Six lines of soundings were run across the Caribbean Sea, four between the Leeward Islands and the Main, and diagonal lines on and off the coast of the United States of Colombia. The eastern part of the Caribbean Sea is the deepest, the greatest depth being 2,844 fathoms, in latitude $13^{\circ} 25'$ N., longitude $66^{\circ} 25'$ W. Off the Honduras coast, however, still deeper water was found, there being 3,169 fathoms at 60 miles southwest of the Grand Cayman.

An interesting discovery was that of a submarine ridge connecting the islands of Santa Cruz and Puerto Rico, the least depth on which was 578 fathoms and the greatest 900, while on either side was found over 2,000 fathoms.

Aves Islet, 100 miles westward of Guadaloupe, was found to be the summit of a mountain, precipitous on its western slope and extending in a south-southeast direction over 150 miles to the 1,000-fathom curve.

During the summer and autumn of 1884 hydrographic work was merely incidental, as continuous dredging and trawling generally interfered with the correct locating of the stations. Still, a number of the soundings taken were considered plotted with sufficient accuracy to be of hydrographic value. This work was off the United States coast between Cape Hatteras and George's Banks.

Nothing of special interest was definitely ascertained. But in the course of the season it became very evident that in the vicinity of the 40th parallel and the 70th and 71st meridians there is an easterly and a westerly movement of the water, alternating at intervals of apparently about half a day. Circumstances prevented a close examination into this matter, but, as the approximate time of the change of the current was noticed on several occasions to be later each day, it is believed that the phenomenon may be attributed to the influence of the moon, and that probably there may be tidal currents, less pronounced, but as regular there as along shore.

Indications were also found of a pocket running in northward from the 600-fathom line on about the meridian of $70^{\circ} 15'$, differing from the contour lines on existing charts. But, owing to cloudy weather and the impossibility of keeping a good reckoning while trawling, the positions found were not considered sufficiently reliable to warrant making a report to the Hydrographic Office.

Dredging and Trawling Record of the United States Fish Commission steamer Albatross, Season of 1884.

LIST OF DREDGING STATIONS OCCUPIED BY THE U. S. COAST SURVEY STEAMERS CORWIN, BIBB, HASSLER, AND BLAKE, FROM 1867 TO 1880.

The dredgings from 1867 to 1871, and those of the *Hassler* in 1872, were all made by Count L. F. Pourtales, Assistant U. S. Coast Survey, in a great measure under the direction of Prof. Louis Agassiz, who accompanied several of the expeditions. Their positions were originally published in the Bulletin of the Museum of Comparative Zoology at Cambridge, Mass., in September, 1879. A continuous series of numbers running from 1 P. to 224 P. has been assigned to them for convenience in placing them on charts without confusing them with other Coast Survey or Fish Commission dredgings.

The following stations were occupied by the *Corwin*, Acting Master R. Platt, U. S. Navy, commanding, in 1867, in connection with a survey for a telegraph cable between Key West and Havana. The expedition was cut short by the breaking out of yellow fever on board.

Serial number.	Date.	Depth.	Locality.
		<i>Fathoms.</i>	
1 P	May 17	90-100	5 miles SSW. of Sand Key, Fla.
2 P	May 24	270	1.6 miles from Chorrera, Cuba.
3 P	May 25	350	2 miles from Chorrera, Cuba.
4 P	May 29	270	1.6 miles from Chorrera, Cuba.

The dredging in 1868 and 1869 were made by the *Bibb*, Acting Master R. Platt, U. S. Navy, commanding. They are all situated in the Florida straits, between Tortugas and Cape Florida. The positions, as published in the Bulletin of the Museum of Comparative Zoology, were only given in a general way, and are here taken from Count Pourtales's original charts, preserved in the Coast Survey Office. A separate series of numbers is attached to each day's work, both on the charts and in the bulletin, and these numbers and the depths given correspond for the most part, except that the depth on the charts have been corrected whilst those in the bulletin are apparently from the original rough notes. In some cases, however, a different number is given to the haul on the chart from that in the bulletin. All notes here given on the character of the bottom are also derived from the charts. The number and letter assigned to each dredging on the original charts and record-books, the number given in the bulletin, and the depths given by them, respectively, are given in separate columns, so as to facilitate future comparisons. A few hauls, mostly shallow water ones, it has been impossible to place exactly.

Dredgings made by U. S. Coast Survey, 1868-'69.

On the voyage of the *Hassler*, Lieut. Commander R. P. Johnson, U. S. Navy, commanding, from Boston to San Francisco in 1871-'72, dredgings, numbered from 1 to 8, were made off Sandy Bay, Barbados, and twenty-six other dredgings were made in the South Atlantic, besides fifteen made off the coast of Chili. To the thirty-four hauls in the Atlantic, numbers from 217 P. to 250 P. have been assigned. The dredgings were made by Count Pourtales under the direction of Prof. Louis Agassiz.

Dredgings of the Hassler in 1871-'72.

Serial number.	Original number of dredging.	Date.	Latitude S.	Longitude W.	Depth in fathoms.	Locality.
217-20 P.	1-4	1871. Dec. 29			75-100	Off Sandy Bay, Barbados.

242 P.	26	Mar. 1	37 42	56 20	44	Off La Plata River.
243 P.	27	Mar. 3	40 22	60 35	30	Off Bahía Blanca, Argentine Republic.
244 P.	28	Mar. 4	41 17	63 00	17	Off mouth of Rio Negro, Argentine Republic.
245 P.	29	Mar. 4	41 15	63 50	25	In Gulf of S. Matias, Argentine Republic.
246 P.	30	Mar. 7	41 40	63 13	30	Do.
247 P.	31	Mar. 9	44 52	64 10	55	Off Cape Raso, Patagonia.
248 P.	32	Mar. 11	49 40	66 50	57	Off Point S. Julian, Patagonia.
249 P.	33	Mar. 12	51 26	68 05	58	Off Coy Inlet, Patagonia.
250 P.	34	Mar. 13			22	Off Cape Possession, Patagonia.

The dredgings in 1872, except those of the *Hassler*, were made by Dr. William Stimpson. The first ones were made upon the *Bibb*, Acting Master R. Platt, U. S. Navy, commanding, those numbered 1 to 29 S. in this list being in the Yucatan Channel, following a proposed telegraph line, and 30 to 34 S. south of Sand Key, near Key West. Dr. Stimpson afterwards joined the *Bache*, Lieut. Commander I. A. Howell, commanding, and made dredgings numbered 41 to 60 S. Lieutenant Commander Howell had made a few dredgings in anticipation of Dr. Stimpson joining him, numbered 35 to 40 S. All the *Bache's* dredgings were off the west coast of Florida, except 56 to 60 S., which were southwest of the Tortugas.

Dredgings made by the Bibb and Bache in 1872.

NOTE.—Either the depth or the position of 60 S. must be erroneous, as there is less than 200 fathoms there.

During the season of 1877-'78 the dredging operations from December to March were in charge of Prof. Alexander Agassiz, and were conducted upon the *Blake*, Lieut. Commander C. D. Sigsbee, U. S. Navy, commanding. The cruise extended from Key West to Havana, from Havana westward along the north coast of Cuba, from Key West to the Tortugas, thence to the northern extremity of the Yucatan Bank and Alacran Reef, to Cape Catoche and across to Cape San Antonio, returning to Key West, and from Key West to the Tortugas, and northward to the mouth of the Mississippi River. The positions were originally published in the Bulletin of the Museum of Comparative Zoology at Cambridge, Mass., September, 1879. In giving these positions on the charts, etc., the word Ag. has been added to the numbers in the bulletin so as to distinguish them from the dredgings of the U. S. Fish Commission, Count Pourtales, etc. The positions from 1 Ag. to 4 Ag. are taken from Sigsbee's original charts.

Dredgings made by the Blake in 1877-'78.

NOTE.—Stations 50 to 79 were occupied by Lieut. Commander Sigsbee while in search of *Pentacrinus*.
 *The position or depth must be wrong, as there are 1,700 fathoms there; perhaps 28° 31'.

No dredgings appear to have been taken to which the numbers 80 to 99 in this series were originally given, but on the original chart of Sigsbee's cruise seven dredging stations are marked, which are not contained in Professor Agassiz's list in the bulletin. To these, numbers from 80 to 86 Ag. have been assigned.

Serial number.	Latitude N.	Longitude W.	Depth.	Kind of bottom.	Locality.	Temperatures.

85 Ag.	23 18 30	89 13 00	82	Co. M. and S.	do.		
86 Ag.	23 16 00	89 16 00	91	Co. M. and S.	do.		

During the season of 1878-'79, the dredgings, from December to March, were in charge of Prof. Alexander Agassiz, upon the *Blake*, commanded by Commander J. R. Bartlett, U. S. Navy. The cruise extended from Key West to Havana, from Havana to Jamaica through the Old Bahama Channel and Windward Passage, from Jamaica to St. Thomas, along the south coast of Hayti and Porto Rico. From St. Thomas the *Blake* visited Santa Cruz, Saba Bank, Montserrat, St. Kitts, Guadeloupe, Dominica, Martinique, St. Lucia, St. Vincent, the Grenadines, Grenada, extended the dredgings as far as the 100-fathom line off Trinidad, returned to St. Vincent, and finished the dredging operations at Barbados. These positions were also published in the Bulletin of the Museum of Comparative Zoology, September, 1879, and are distinguished in the same manner as the preceding ones. The serial numbers, temperatures, and localities are taken from the Bulletin, while the depths, latitudes, and longitudes, nature of bottom, original numbers of casts, and letters designating lines are mainly taken from "Hydrographic Notice No. 9 of 1882," published by the U. S. Hydrographic Office, with the exception of about a dozen hauls, to which no latitudes or longitudes are affixed.

Dredgings made by the Blake in 1878-'79.

The following stations were occupied by Commander J. R. Bartlett on the *Blake*, from February to May, 1880. They are all, except the first three, in the western Caribbean, between Cuba, Jamaica, and Honduras:

Station.	Latitude N.	Longitude W.	Depth.	Nature of bottom.	Locality.	Temperatures.	
						Surface.	Bottom.
I	° ' "	° ' "	Fath.			°	°
IV	20 11 00	73 33 00	766	Hard coral sand, sponge.	9 miles E. $\frac{1}{2}$ N. of Mathewtown, Gt. Inagua Island.		64 $\frac{1}{2}$
IV*	20 24 15	73 56 50	772	Coral sand, stones, shell.	Off east end of Cuba		40
V			288	Sand mud, black specks.	do.....		39 $\frac{1}{2}$
VI	17 51 50	76 45 00	250	Mud	3.3 miles SE. by E. $\frac{1}{2}$ E. from Santiago de Cuba Light.		55 $\frac{1}{2}$
VII	17 28 30	77 30 00	610	Coral sand.	Off Port Royal, Jamaica	80	56 $\frac{1}{2}$
VIII	17 45 00	77 58 40	322	do.....	South of Jamaica		41
IX	18 12 00	78 20 00	254	Mud	do.....		52
X	18 13 20	78 36 40	103	Coral	West of Jamaica		
XI	17 30 00	79 14 00	555	Coral sand, ooze.	do.....		41
XIII			272	Coral	West of Pedro Bank		56 $\frac{1}{2}$
XIV			608	Coral sand.	1 mile west of Georgetown, Grand Cayman Island.		41
XV	18 51 00	83 07 00	903	Coral sand, ooze, pteropods.	Off Grand Cayman Island		41
XVII	18 22 20	87 21 30	41	Coral	East of Misteriosa Bank		
XVIII	18 20 30	87 16 40	600	Coral sand, ooze	South of Chinchorro Bank		79
XX	16 42 00	83 01 00	961	Coral sand, gray ooze.	do.....		40 $\frac{1}{2}$
XXI	19 48 00	77 17 00	33	Coral	Northeast of Honduras		39 $\frac{1}{2}$
XXII	19 48 47	77 23 00	250	Mud	do.....		
XXIV			206	Coral sand.	East of Cape Cruz, Cuba		
XXVI			297	do.....	do.....		
XXIX	21 23 19	82 54 42	300	do.....	5 miles east of Cape Cruz, S. side Cuba.		
XXX	21 26 30	86 28 40	51		1 mile N. of W. end Cayman Brac Island.		
			100		South of Isle of Pines		55
					East of Cape Catoche, Yucatan		69
					Off entrance Port Royal, Jamaica.		

The following stations were occupied by the *Blake* during the dredging cruise of the summer of 1880:

Stations 301 to 308 are on the lines run off the northeastern extremity of George's Bank.

Station 309 is intermediate between the northeastern extremity of George's Bank and the next line run off Newport, which includes stations 310 to 312.

Stations 313 to 318 are in a line normal to the coast in about latitude 32° north.

Stations 319 to 323 are in a line parallel to the coast in the so-called axis of the Gulf Stream.

Stations 324 to 329, south off Cape Hatteras.

Stations 330 to 333, north off Cape Hatteras.

Stations 334 to 339, east off Cape May.

Stations 340 to 347, normal to coast southeast off Montauk Point.

Dredgings by the Blake in 1880.

DREDGING STATIONS OF THE CHALLENGER IN THE ATLANTIC OCEAN, 1872 TO 1876.

The British steamer *Challenger* left England for her scientific trip around the world in December, 1872, and returned to England in May, 1876. She was under the command of Captain Nares, and the scientific operations were under the charge of Dr. (afterward Sir) Wyville Thompson.

The serial numbers in the following table are those of the stations at which serial temperatures, trawlings, and dredgings were obtained, not those of the soundings, which had a separate numbering, running up to 504. This table includes only the stations in the Atlantic, and of these only those at which dredgings and trawlings were made are given, except from No. 22 to No. 59 (including all stations in North American waters). For these all stations, which includes also *all* the soundings made, are given, and they are placed upon the accompanying charts. In the ninth column, D. signifies dredging; T. trawling.

Dredging stations of Challenger, 1872 to 1876.

DEEP-SEA DREDGINGS OF LE TRAVAILLEUR.

Abstract of deep-sea dredgings in the Bay of Biscay, the Atlantic Ocean, and the Mediterranean, by the French dispatch boat Le Travailleur.

[Under the command of M. E. F. Richards, Lieutenant de Vaisseau, by a commission of naturalists, of which M. Milne Edwards was president.]

BAY OF BISCAY IN 1880.

DREDGINGS OF THE TRAVAILLEUR IN 1882.

The *Travailleur* in 1882 continued the series of dredgings commenced in 1880 and 1881, and extended them from Cape Penas, on the north coast of Spain, along the coast of Portugal, the Gulf of Cadiz, and the coast of Morocco to the Canary Islands, through the strait of Bocayna (between Fuerteventura and Lanzarote), to Madeira, Lisbon, and back to Rochefort. Twenty-one hauls of the dredge were made, in from 100 to 3,700 meters (55 to 2,023 fathoms) of water. M. Alphonse Milne-Edwards was in principal charge of the natural history observations. A general report of the expedition was published in the *Revue Maritime et Coloniale*, February, 1883 (Tome LXXVI, page 454), and the details of position, etc., in the *Annales Hydrographiques*, vol. 5, p. 4, 1883.

The number of the *Annales Hydrographiques* containing these positions was found to be wanting in all the accessible libraries in the United States, and although ordered from France, failed to arrive in time to allow the positions to be included in this paper.

DREDGINGS OF THE FRENCH STEAMER TALISMAN, 1883.

The *Talisman* continued the researches carried on by the *Travailleur* in 1880-'82, and extended from the coast of Portugal along the west coast of Africa, touching at the Canaries, to about 17° N. latitude; thence westward to the Cape de Verde Islands; thence northwestwardly to latitude $31^{\circ} 34'$, longitude $41^{\circ} 15'$; thence northeasterly to the Azores, and thence back to France.

Dredgings by the French steamer *Talisman*, 1853.

DREDGING STATIONS OF THE ITALIAN STEAMER WASHINGTON IN THE MEDITERRANEAN, 1881.

The *Washington* was under the command of Commander G. B. Magnaghi, of the Italian navy, and the dredgings were under the direction of Prof. Enrico Hillyer Giglioli. The report from which these positions are taken was published in the Report of the Third International Geographical Congress ("Terzo Congresso Geografico Internazionale") held in Venice in 1881, published in Rome 1882.

ZOOLOGICAL STATIONS OF THE NORWEGIAN NORTH-ATLANTIC EXPEDITIONS, 1876-1878.

These expeditions were made by the steamer *Vöringen* and the zoological and physical researches were under the charge of Dr. Danielssen, Profs. Mohn and G. O. Sars, Herr Friele, etc. The first expedition, in 1876, extended along the western coast of Norway to the Färöe Islands and Iceland; the second, in 1877, from Bergen to outside the Loffoden Islands, and from Tromsøe to Jan Mayen; the third, in 1878, to Vardö, thence westward to Beeren Island, and afterwards to Spitzbergen in 80° N. latitude. All the dredging stations are given in this list.

Dredgings of Norwegian North-Atlantic expeditions, 1876-1878.

ZOOLOGICAL STATIONS OF THE SWEDISH ARCTIC EXPEDITIONS OF 1875, 1876, AND 1878-79.

The dredgings of 1875 were made by A. E. Nordenskiöld and Dr. Hjalmar Thée in the sloop *Proeven*, those of 1876 by Nordenskiöld in the steamer *Ymer*, those of 1878-79 by Nordenskiöld in the *Vega*.

The numbers assigned to the stations are arranged geographically, instead of according to the dates at which they were made.

The numbers 98, 103, and 104 refer to collections not made by the *Vega* expedition but brought in by the Tschuktsches, who found them thrown on the shores in the spring and summer months of 1879.

DREDGING STATIONS OF THE DANISH ARCTIC EXPEDITION, 1882-'83.

The Danish Arctic expedition of 1882-'83 in the steamer *Dijmphna*, commanded by Lieutenant Hovgaard, was partially at the expense of the Danish Government, but mainly at that of the brothers Gamél. The naturalist in charge was Th. Holm. The zoological and botanical results were published in 1887 at Copenhagen in an octavo volume, containing papers by Holm, Jensen, Deichmann Branth, Wille and Kolderup Rosenvinge, on the botany, and by Lütken, Hansen, Levinsen, Bergh, Jungersen, Traustedt, Collin, and Holm on the zoology.

The dredgings were on the southern coast of Nova Zembla and in the Kara Sea.

No. 1 in the Kostin Schar on the southwest coast of Nova Zembla.

No. 2 in the Nicholskoï Schar on the southwest coast of Nova Zembla.

No. 3 in the Olenje Sund on the southwest coast of Nova Zembla.

Nos. 4-6 in the Petuschowski Schar in the southwest coast of Nova Zembla.

No. 7 in the Kara Sea, off Cape Yarasol.

Nos. 8-10 in the Jugor Schar at its outlet into the Kara Sea.

Nos. 11-188 in the Kara Sea.

Nos. 189-90 in the Kara Strait, between Nova Zembla and Waigatsch Island.

Dredging stations of the Danish Arctic expedition, 1882-'83.

DREDGING AND SOUNDING STATIONS OF THE LIGHTNING, 1868.

The dredgings made by the British surveying steamer *Lightning* in 1868 were undertaken at the request of the Royal Society, and, with the exception of the dredgings of Count Pourtales in 1867 and 1868, were almost the first deliberate attempts to investigate the deep-sea fauna. The region explored was between the north of Scotland and the Färöe Islands and extending thence to a distance of about 250 miles northwest of Scotland. The series of temperatures obtained on this expedition, showing the great difference of temperature existing to the northeast and southwest of a submarine barrier (discovered by a subsequent expedition) were the first contributions of importance to our knowledge of the laws governing deep-sea temperatures. The scientific observations were under the charge of Dr. W. B. Carpenter and Prof. Wyville Thomson, and the preliminary report by Dr. Carpenter was published in No. 107 of the Proceedings of the Royal Society, 1868.

DREDGING STATIONS OF THE PORCUPINE, 1869.

The dredgings of the British steamer *Porcupine* in 1869 were in continuation of those of the *Lightning* in 1868, and were, like them, undertaken at the request of the Royal Society. They extended west of Ireland and Scotland, as far west as the Rockall Bank, and as far north as the Färöe Islands, and reached a depth of 2,435 fathoms, a much greater

one than ever before attained. Dr. Carpenter's report on them is contained in No. 121 of the Proceedings of the Royal Society, Vol. 17, p. 397.

DREDGING AND SOUNDING STATIONS OF THE PORCUPINE,
1870.

The dredgings of the *Porcupine* in 1870, like those of 1869 and those of the *Lightning* in 1868, were undertaken at the request of the Royal Society to extend the examination of the deep-sea bottom to the south of Europe and the Mediterranean. Two cruises were made, the first under the scientific direction of Mr. Gwyn Jeffreys, accompanied by Mr. Josua Lindahl and Mr. W. L. Carpenter, extending from Falmouth to Gibraltar, and the second under W. B. Carpenter, assisted by Mr. Lindahl and Mr. P. H. Carpenter, exploring the western basin of the Mediterranean between Gibraltar and Malta, in order to determine its physical and biological relations to the Atlantic, with special reference to the Gibraltar current. The temperature observations made on this second cruise, showing an almost absolute uniformity of temperature from the depth of about 100 fathoms (or that of the Straits of Gibraltar) to the greatest depths reached (1,743 fathoms), shed a most important light upon the phenomena of ocean basins inclosed by shallow barriers, such as the Mediterranean, the Caribbean Sea, Gulf of Mexico, and Sooloo Sea, as contrasted with those of the open ocean. Thus, on this season's work, the six temperatures taken below 1,000 fathoms in the Mediterranean (ranging from 1,328 to 1,743 fathoms) were all between

54.7° and 56°, and one at 112 fathoms giving 55.5°, whilst in the Atlantic, almost in the same latitude, depths of 1,095 and 1,065 fathoms gave 39.7° and one of 128 fathoms, a little farther north, 52.5°. The report on the expedition, by Mr. J. Gwyn Jeffreys and Dr. W. B. Carpenter, forms No. 125 of the Proceedings of the Royal Society, December 8, 1870. There appear to be some discrepancies between the numbers assigned to the stations in the Mediterranean in the detailed description of the dredgings and those given in the list of stations and on the charts, but as the latter two series agree the others are probably erroneous. Care, therefore should be taken in making use of the lists of animals dredged to see that they really belong to the station ascribed to them in the body of the text. The explorations of the first cruise (No. 1 to 38) extended from July 7 to August 5, 1870, and those of the second cruise from August 15 to October 1.

DREDGINGS OF THE SHEARWATER, 1871.

In 1871 the steamer *Shearwater* made some dredgings on the coral banks between Sicily and Cape Bon, in depths of not more than about 200 fathoms. Dredging was not the main object of the expedition and no record exists, so far as is known, of the precise localities.

SOUNDING AND DREDGING STATIONS OF THE VALOROUS, 1875.

The *Valorous* was a war-steamer sent as a store-ship with the British North-Polar Expedition of 1875 (the *Alert* and *Discovery*). As it was to return directly from Disco, Greenland, the Royal Society requested the Government to permit Mr. J. Gwyn Jeffreys and an assistant, Mr. Herbert P. Carpenter, to make the voyage, so as to undertake natural history observations both at Disco and on the *return* voyage. The reports on the dredgings, etc., between Davis's Straits and England by Mr. Jeffreys, Dr. William B. Carpenter, Rev. A. F. Norman, Dr. W. C. McIntosh, Professor Allman, Professor Duncan, Prof. George Dickie, and Mr. R. Etheridge were published in No. 173 of the Proceedings of the Royal Society, 1876. The first dredging was made about July 22 and the last on August 23, 1875. In the following table the letter D. indicates a dredging, S. T. a serial temperature. At the other stations soundings only were made.

Sounding and dredging stations of the Valorous, 1875.

Serial No.	Latitude N.	Longitude W.	Depth.	Bottom temperature.	Kind of observation.	Nature of bottom.	Locality.

15	55 58	28 42	1,485	36.5	S. T.	Clay, blue mud	Do.
16	55 10	25 58	1,785	36.7	D.	Globigerina ooze (blue mud under)	Do.

DREDGING STATIONS OF THE KNIGHT ERRANT, 1880.

The dredgings of the British steamer *Knight Errant* were made in the Färöe Channel between the Färöe Islands and the north of Scotland, covering a part of the same ground that was explored by the *Lightning* in 1868, and defining the position of the submarine barrier by which the so-called warm and cold areas of the Färöe Channel are divided from each other. The report of the expedition was published in the Proceedings of the Royal Society of Edinburgh, Vol. XI, pp. 638-720, read May 15, 1882. The dredgings were under the scientific charge of Mr. John Murray, of the *Challenger* expedition.

Dredging stations of the Knight Errant.

Serial No.	Date.	Latitude N.	Longitude W.	Depth.	Kind of bottom.	Temperatures.

DREDGING STATIONS OF THE TRITON, 1882.

The dredgings of the British surveying steamer *Triton* in 1882 were, like those of the *Knight Errant* in 1880, directed towards the further exploration of the Färöe Channel, and covered nearly the same ground. They were also under the scientific charge of Mr. John Murray, and Mr. J. Gwyn Jeffrey's report on the mollusca obtained was published in the Proceedings of the Zoological Society of London, June 19, 1883, from which these positions have been taken.

Dredging stations of the Triton, 1882.

13	59 51 02	8 18 00	570	45.7	West of ridge.....	Warm.

* Partly on the ridge.

† The trawl had been carried right over the ridge and came up in the cold area.

DREDGINGS OF THE SWEDISH FRIGATE JOSEPHINE, 1869.

These dredgings extended from the coast of Portugal to the Azores, and thence across the Atlantic to America. They were under the charge of Messrs. Smith and Ljungmans. I have been unable to meet with any details as to the precise positions or character of the dredgings.

CLASSIFIED LIST OF ALL DREDGINGS OF OVER 60 FATHOMS MADE BY U. S. FISH COMMISSION NORTH OF BAHAMAS.

Dredgings made in the Gulf of Maine are not given, nor those made *inside* the Banks situated off the coast of Nova Scotia.

The others are designated as follows:

S.—Off Savannah to Bahamas. N. Lat. 27° 30' to 34° 00'.

H.—Off Cape Hatteras. N. Lat. 34° 00' to 36° 30'.

C.—Off Chesapeake Bay. N. Lat. 36° 30' to 38° 00'.

D.—Off Delaware Bay. N. Lat. 38° 00' to 39° 00'.

M.—South of Block Island, Martha's Vineyard, and Nantucket.

G.—South to east of St. George's Bank.

N.—South and southeast of Newfoundland and on the Flemish Cap.

SERIES OF TEMPERATURES TAKEN BY THE SPEEDWELL IN 1877, 1878, AND 1879.

[A + above the temperature indicates that it is that of the bottom, when that precise depth is not in the table; a Δ before the temperature indicates that the precise depth at which it was taken will be found in column A.]

A series of temperature observations was made by the Speedwell, off Provincetown, on September 25 and 29, 1879. These had separate numbers from No. 1 to No. 25, and no dredgings or natural-history observations were made. Their localities, etc., and the serial temperatures taken on those days are therefore placed at the end of the tables of serial temperatures taken in the course of dredging expeditions.

Serial number.	Date.	Locality.		Depth.	Air. CHART SHOWING THE POSITIONS
OF THE
DREDGINGS MADE BY THE U.S. FISH COMMISSION
IN THE
GULF OF MAINE, MASSACHUSETTS AND CAPE COD BAYS
AND IN
VINEYARD AND NANTUCKET SOUNDS
AND ADJACENT WATERS
FROM 1871 TO 1887

Prepared by Sanderson Smith

The Dredgings marked *BI* were made in 1879 on the steamer *Blanchard*.
Those marked *B* were made from 1875 to 1878 on Coast Survey steamer *Blake*.
Lists of the stations embraced within this chart were published either in the U.S. Fish Commission report for 1879, or in the Bulletin U.S. Fish Commission Volume II 1883.

NOTE.

Of the following locations only the first of each series is marked on the Map, the others are in close proximity to it.

NOTE.

The following positions are too indefinite to be placed on chart
749-8 NE of Nantucket I.
c. 9 SE of
752-8 SW of Martha's Vineyard
864-1 near Gay Head
616-18 Vineyard Sound
862-8 Buzzards Bay
602-7 173
608 off SE part of Martha's Vineyard
748, 1000-1005 are impossible to locate

No. 2.

CHART SHOWING THE POSITIONS
OF THE
DREDGINGS MADE BY THE U.S. FISH COMMISSION
IN
LONG ISLAND, VINEYARD AND NANTUCKET SOUNDS
AND ADJACENT WATERS

FROM 1871 TO 1887.

Prepared by Sanderson Smith.

NOTE
Dredgings Numbered 401-10
414-16, 420-34, 439-44, 460-4,
482-8, 508-14, 542-8, 511
in Fisher's Island Sound.

For list of positions for which there is no room on this chart and in-
definite positions on it, see note on chart No. 1.

The Dredgings marked BL were made in 1873 on the
steamer Bluebird.

Those marked B. were made from 1872 to 1874
on Coast Survey steamer Blake.

That marked 347 Ag. was made by Prof. Agassiz
on Coast Survey steamer.

Lists of the Stations embraced within this Chart
were published either in the U.S. Fish Commission report
for 1879 or in the Bulletin U.S. Fish Comm. Vol II. 1882.

CHART SHOWING THE POSITIONS
OF THE
DREDGINGS MADE BY THE U. S. FISH COMMISSION
IN THE ATLANTIC OCEAN

FROM 1871 TO NOVEMBER 1887.

INCLUDING ALSO THE

DEEP SEA DREDGINGS OF THE U. S. COAST SURVEY

AND THE

BRITISH STEAMER CHALLENGER
IN THE REGION MAPPED.

PREPARED BY SANDERSON SMITH.

About 3800 hauls of the Dredge have been made by the U. S. Fish Commission, of which about 190 were in the Gulf of Mexico and the Caribbean Sea. All Dredgings over 100 fathoms are shown and about one third of the rest.

The Numbers designate the Dredging Stations as entered on the records of the U. S. Fish Commission, except those marked *Ag* made by Prof Agassiz on Coast Survey steamers and those marked *Ch* made by British steamer Challenger.

The Dredging Stations marked *B* were made in 1873 by the U. S. Fish Comm on the steamer Bluebird. Those marked *B* were made from 1872 to 1874 by the U. S. Fish Comm on Coast Survey steamer Blake.

PREPARED BY SANDERSON SMITH.

The Dredgings of the U.S. Fish Commission are indicated by numbers only.

Of the dredgings made on Coast Survey vessels, those by L. F. Pourtales from 1867 to 1872 are marked thus (9 F.). Those by Prof Alexander Agassiz from 1877 to 1879, thus (10 Ag.). Those by Dr. Wm. Stimpson in 1872 thus (20 S.). Those by Capt. Bartlett in 1879 and 80 thus (XXC).
