“THE handmaiden of all modern research is bibliography, and like the domestic variety it can range from the heights of the superlative ‘treasure’ to the slatternly depths of inefficiency. At its best the service it gives is incalculable, and even at its worst it is capable of some small assistance. Good research work can only be built upon the foundations laid by previous workers, and without the aid of bibliography the student is lost. He cannot know where to begin his investigations and can but grope blindly, conscious of only what is immediately to hand and ignorant of all around him and all that has gone before. Without bibliographical aid his search for reference is inevitably imperfect and the results of his investigations will reflect these imperfections.”

FOREWORD

This bibliography was designed to bring together the more important references to publications relating directly to western grazing lands, the domestic livestock and wildlife produced thereon, and the management of these lands, livestock and wildlife in the 17 Western States and Alaska, which comprise the range country, excluding eastern Texas and eastern Oklahoma. Published reports on work in other regions, especially the eastern part of the United States, have not been included unless applicable to western range problems. Only those local publications of real value have been included; abstracts, brief general notes, obsolete bulletins, mimeographed material, indefinite preliminary reports, etc., have been excluded insofar as possible, unless they contain a definite, valuable piece of information. Publications on hogs and dairy cattle have not been retained because of their minor importance on western ranges. Foreign references, other than those especially important Canadian and English publications which deal with our western range problems, have been excluded except in the case of a few references of very great general value. An explanatory note has been appended to each such foreign reference which has been included. The bibliography is believed to be reasonably complete through 1933 for the publications of the Federal Government, the State agricultural experiment stations, articles in the more important popular magazines and scientific journals, and text and other books. Some of the more important references published from 1934 to 1937 have also been included.

In general, the headings indicate the character of the references included in each section. However, to facilitate the location of border-line references, each heading has been distinctly defined as to the scope of material included therein. Cross references are listed at the end of each section.

The classification scheme used in this bibliography is a revision and amplification of C. L. Forsling's grazing section of *A Classification of Forestry Literature*, published in the *Journal of Forestry*, February 1923. The main headings of this revised scheme were first published in 1926 as a part of the *Extension Service Handbook on Agriculture and Home Economics*.

Titles of periodicals are abbreviated according to the list in *Department Bulletin 1330, Abbreviations Employed in Experiment Station Record for Titles of Periodicals*, published in 1925.

The author wishes to thank those members of other bureaus in the Department of Agriculture who reviewed and offered many helpful suggestions on certain sections. Grateful acknowledgment is made to those members of the Forest Service who gave valuable assistance in the preparation of the manuscript, particularly to W. R. Chapline, Chief of the Division of Range Research, whose continuous advice and suggestions, especially as to organization and selection of material, were invaluable. Acknowledgment is also due to the late Mrs. Virginia Gassaway and to Miss Margaret F. Call for their very considerable assistance.

POISONOUS PLANTS

Publications treating of the broad general field of poisonous range plants; the poisonous properties of those particular range plant species or genera which are poisonous to all or several classes of livestock excluding those publications dealing with the effect of such plants on a single class of livestock, and also excluding those publications dealing primarily with the control and eradication of poisonous range plants.

See section Eradication of Unpalatable and Noxious Plants for publications on this last-named topic, and section Monographs and Related Material for descriptions of poisonous range plants.

ECOLOGY

Publications treating of the broad generalities, principles, and terminology of range ecology, which is the study of all factors in the environment of the individual range plant or groups of plants, and the effects which these various factors have on the plants; comprehensive works covering a variety of range ecology topics which, if located under the various detailed headings, would require overextensive cross-indexing; and other pertinent range ecological material which cannot properly be located elsewhere.

ERADICATION OF UNPALATABLE AND NOXIOUS PLANTS

Publications treating specifically of the principles, methods, and practical applications of controlling and eliminating poisonous, unpalatable, mechanically injurious, and otherwise noxious range plants on western grazing lands. References dealing with weeds primarily eastern and midwestern but known to extend into the range area have also been included.

FEEDS AND FEEDING

Publications treating in a general way of the supplemental feeds and feeding of western range livestock of all classes as a group on western grazing lands, and on western, midwestern and eastern feed lots both for winter feeding and fat feeding for the market; including all specific references to horse and goat feeds and feeding within the limits just defined.

See section, Cost of Production, for discussions of the cost of feeds and feeding of range livestock; Distribution and Control of Livestock, for the salting of range livestock; and Forage Value and Artificial Revegetation, for closely related references.

ENEMIES OF RANGE LIVESTOCK

Publications treating in a general way of all the enemies of range livestock; a specific enemy of range livestock provided that enemies is not a disease, parasite, or predatory animal; and the effect of mechanically injurious range plants on any class of range livestock.

See section, Eradication of Unpalatable and Noxious Plants, for the control and eradication of mechanically injurious range plants.

RANGE INFLUENCES

Publications treating in a broad, general way of various factors included elsewhere which have a direct influence on western livestock ranges; works on this subject which, if located under the various detailed headings would require over-extensive cross-indexing; and other pertinent material which cannot properly be located elsewhere.

FOREST GROWTH AND REPRODUCTION

Publications treating of forest growth and reproduction, and the material relating thereto, in relation to their influence on western grazing lands and livestock ranges; the effect of forest growth and reproduction on the adaptability of range to different classes of stock; grazing on timberlands; and forestry versus grazing.

The eastern, southern, and foreign citations found in this section have been included because their material is pertinent to the grazing-forest growth problem on western grazing lands.

EROSION

Publications treating generally or specifically of the kinds of soil erosion, their effects and control, and material relating thereto, on western grazing lands and livestock ranges, including discussions of the differences in plant growth on eroded and uneroded soils, but excluding discussions of rodent-soil relationships.

See section Control of Range-Destroying Rodents for this last-named topic.

GAME

Publications treating of game of all kinds solely in relation to its influence on western grazing lands, livestock ranges and range vegetation; the effect of game on the adaptability of range to different classes of stock; excluding discussions on predators of range livestock, and also excluding discussions on game management.

See section on Wildlife Management and subsections for this last-named topic. It is frequently impossible to distinguish game management from the effects which game has on western ranges. This situation explains the extensive cross-indexing between this section, section on Wildlife Management and its subsections.

LAND UTILIZATION

Publications treating in a general way of the uses, and the material relating thereto, for which western grazing lands and livestock ranges are best fitted in order that they may be of the greatest possible benefit to mankind; land classification and land care.

This section is distinguished from Range Utilization and Maintenance in that here the emphasis is on what use can best be made of the land; while in the former the emphasis is on how to get the most out of using the land for grazing.

WILDLIFE MANAGEMENT

Publications treating of the management of wildlife in general on western grazing lands and livestock ranges, and the material relating thereto; and other pertinent material which cannot properly be located elsewhere.

See section on Game under Range Influences for publications treating primarily of the effects which game has on western ranges insofar as it is possible to distinguish these effects from game management; also Predatory Animals, under Range Livestock.

BIG GAME

Publications treating specifically of management of big game on western grazing lands and livestock ranges and the material relating thereto, excluding the effects and influences which big game has on western ranges in so far as it is possible to distinguish these effects from management, and also excluding the economic value and protection of big game.

GAME BIRDS

Publications treating specifically of management of game birds on western grazing lands and livestock ranges, and the material relating thereto, excluding the effects and influences which game birds have on western ranges insofar as it is possible to distinguish these effects from management, and also excluding their economic value and protection.

FUR ANIMALS

Publications treating specifically of the management of fur-bearing animals on western grazing lands and livestock ranges, and the material relating thereto, excluding the effects and influences which fur animals have on western ranges insofar as it is possible to distinguish those effects from management, and also excluding their economic value and protection.

RANGE RESEARCH

Publications treating of the methods, description, equipment, history, and need for range investigations on western grazing lands, and the material relating thereto. The published results of individual range research projects are included elsewhere in the bibliography, their locations being determined by the subject matter of each particular project.
