BOUNTIFUL RIDGE GROWN "VIRUS FREE"
CATSKILL plants are fast bringing this great Berry
back in heavy production. See strawberry section.

BLUEBERRIES

"The Aristocrat of the Bush Berry Family"

We are one of the largest growers and shippers of Blueberry plants in the U.S. See Blueberry section of catalog for complete listing, prices, and special collection offers.

RANGER — CORONET Peach

This can well serve to bring you the attractiveness of both these varieties which were recently introduced by U.S.D.A.

Our

COMPLETE CATALOG AND PLANTING GUIDE

FALL 1956
SPRING 1957

ORCHARDS, VINEYARDS, AND BERRY FIELDS PLANTED WITH BOUNTIFUL RIDGE GROWN TREES
AND PLANTS TYPIFY THE HORN OF PLENTY

Dwarf Apple Trees

Are now one of our
specialties

offered to you on various Malling
Dwarfing Root Stocks. See the
DWARF APPLE SECTION for full
details.

GALLIA BEAUTY—RED ROME

Leads all other Red Rome types in plantings in the Eastern U. S. . . . in Production and Satisfaction to growers and consumers.

Year after year the true type GALLIA BEAUTY RED ROME continues to lead other Red Rome types. Be sure you are buying true GALLIA BEAUTY RED ROME. Plant Bountiful Ridge Grown Gallia Beauty.

U. S. Plant Patent Granted

THE "COLORA" RED YORK

Leads all Improved Types of the
Famous York Imperial Apple

Demand and Plant "COLORA" Red York

1 yr. old budded Dwarf Apple Trees on Malling 9 root stock. Grown the Bountiful Ridge way—they are the best.

IMPROVED Bountiful Strain MONTMORENCY

Each succeeding year proves
the wisdom of planting this
Great Cherry.

HARRISON H. KEMP

Sept. 26, 1825 — May 7, 1884

Father of Geo. W. Kemp, started the Kemps growing fruit and ornamental trees and plants for the planters of western Penna. nearly a century ago.

HOMER S. KEMP
General Manager

GEO. W. KEMP
May 2, 1868 — June 3, 1943
Founder of
Bountiful Ridge Nurseries

EDGAR H. KEMP

H. George Kemp, son of Homer S. Kemp, is now active in the production, storage and sales of Bountiful Ridge Stock and hopes to be serving you for many years.

Richard Lee Kemp, son of Homer S. Kemp, is now active in the production, storage, and sales of Bountiful Ridge Stock and hopes to be serving you for many years.

Robert G. Kemp, son of Edgar H. Kemp, is now active in the production, storage, shipping and sales of Bountiful Ridge Stock and hopes to be serving you for many years.

SERVING THE FRUIT GROWERS AND HOME OWNERS WITH FINE NURSERY STOCK IS A FAMILY TRADITION — HAVING PRODUCED AND DISTRIBUTED A GENERAL LINE OF NURSERY STOCK TO THE PLANTERS THRU FOUR GENERATIONS OF THE KEMP FAMILY OVER A PERIOD OF MORE THAN 80 YEARS. Experience is a fine **TEACHER**. George Kemp completed his studies at University of Maryland, June 1955, graduating with B.S. Degree, having majored in Horticulture. Richard is also majoring in Horticulture at U. of M. and will graduate June 1957.

GREETINGS

We believe everyone should have a definite goal in life. Most everything one does should contribute to his reaching this goal. Our goal at Bountiful Ridge is to grow the finest nursery stock possible and offer it to our customers at a fair price.

We feel that you, our customers, have a similar goal: to grow your trees, plants, shrubs and vines in such a manner as to realize the maximum enjoyment and profit from them. As in the past your use of Bountiful Ridge Grown Stock will insure this satisfaction. We believe in this kind of sharing and extend a hearty "THANKS" for your help. We sincerely hope that somewhere we have helped you.

The trees and plants which we will harvest this fall and next spring are as fine as can be grown. We are offering them at prices almost the same as in previous years despite the general increases in almost every other commodity. Last year we were short on many items and many of you were disappointed. By the same token, many items will again be in short supply. Therefore, **PLEASE** order early to avoid these same disappointments and further planting delays. We will appreciate your orders whether for one tree or for thousands and will do our best to consistently serve you with **HIGH QUALITY, TRUE-TO-NAME** nursery stock.

"Plan all your plantings this year with Bountiful Ridge Nursery Grown Trees and Plants."

Prices listed in this catalog are effective until Fall 1957 or until supplemented by a New Issue of our Catalog.

PEACHES ***Queen of Fruits***

"THE BOUNTIFUL PEACH WORLD FOR FALL 1956 - SPRING 1957"

A Peach For Every Section! - A Peach For Every Purpose!

AMAZING NEW INTRODUCTIONS . . . IMPROVED "BOUNTIFUL STRAINS" OF
OLD POPULAR VARIETIES . . . ENABLE YOU TO PLANT A
HIGHLY PROFITABLE SUCCESSION OF FRUITS.

Bountiful Ridge Nurseries Have Proven Their Leadership In Producing Superior
Fruit Trees That Give Universal Satisfaction

THRIFTY ● HARDY ● DEPENDABLE

**Will Your Orchard Trees Look Like
This 3 Year Old?**

The day is past when the Planter can afford to buy
"JUST A TREE."

Protect your profits of the future by Planting
Bountiful Ridge Grown Peach Trees this year.

We will be happy to help you plan your plantings
for future production and profits.

OUR GUARANTEE AND PLEDGE

We guarantee the trees and plants we ship to be as represented and invoiced for in grade and quality and if upon arrival you do not find them to be as we state they are, return them to us securely packed and in good condition **WITHIN FIVE DAYS AFTER ARRIVAL** and we will promptly replace or refund purchase price paid at our option. Adequate State and Federal inspection certificates are sent with every shipment guaranteeing protection from injurious diseases. We cannot, under all circumstances guarantee our trees and plants to grow, because continued growth depends largely on soil and weather conditions at planting time as well as planting and care of trees and plants, and we have no control over these conditions. After ten days it is mutually understood that the Nursery stock shipped to you is satisfactory and claims, if any, must be made within ten days after arrival. We reserve the right to adjust claims for replacement of stock made after this ten day period in accordance with established policies of our firm and trade practices of the Nursery Industry.

One of the Nation's Greatest Early Commercial Peaches

ERLY-RED-FRE

A PATENTED VARIETY INTRODUCED, GROWN, AND SOLD
BY BOUNTIFUL RIDGE NURSERIES

The Fruit Is:
Large Size
White Flesh
Freestone
Highly Colored
Finest Quality
Disease Resistant
Good Shipper
A Money Maker

Producing orchards from Texas to Canada and from Maryland to the State of Washington prove the Universal Adaptability of the Erly-Red-Fre.

In all our experience as Nurserymen and Horticulturists, never have we seen a new peach with such wide adaptability and prove so universally satisfactory to grower and consumer, excepting possibly the famous Elberta.

The Erly-Red-Fre originated as a chance seedling in the orchard of Wm. Perry near Chase City, Va. We first saw the peach in 1935 and the second generation trees bore fruit of the same type just two years later. The fruits are highly colored being an attractive red on a creamy white background. The skin is tough and medium thick. The flesh is such that it does not show bruises through the skin for several days and is white all the way through to the pit. It has one of the smallest pits of any cultivated peach. Fruit size is large for such an early peach, some specimens weighing 12 ounces. The entire crop can be packed at 24¢ and up if desired under normal conditions. The tree is very vigorous, resistant to bacterial spot, and bears very young.

The Erly-Red-Fre ripens uniformly, does not show bruises readily and will keep and ship better than Elberta. It is definitely the first ripening freestone peach now in commercial cultivation.

There is a place in every grower's program for the Erly-Red-Fre. Whether you are a large commercial grower or a smaller one depending on local or nearby markets, Erly-Red-Fre is a proven money maker. This great peach can withstand extremely low temperature both in the bud and blossom and still come through with a fine profitable crop. It has also come back from delayed dormancy trouble and hurricane damage to produce outstanding crops. Its inherent resistance to disease make it one of the easiest trees to manage.

Many growers are now realizing another important fact that makes Erly-Red-Fre the great peach that it is. 95 DAYS AFTER BLOOM ERLY-RED-FRE CAN BE PICKED AND SOLD. Not only does this valuable peach bring premium prices BUT THE FRUITS ARE HARVESTED BEFORE PRODUCTION COSTS HAVE USED UP MOST OF THE PROFIT. Modernize your plantings and include this great profit maker in plans for this year.

Acre For Acre In Production — Pound For Pound in Prices Received Per Acre — Tells The Simple Story of Why You Should Plant ERLY-RED-FRE

Yes friends whether you are growing peaches in the South, North, East or West by comparison on the above basis, you will have to admit after a few years of production you have a winner in the Erly-Red-Fre. You have never had a variety that will grow and produce more universally than the Erly-Red-Fre. You have never seen a tree that will recover and produce as abundantly after reverses as the Erly-Red-Fre. Yes, it will produce more pounds or bushels per acre of marketable peaches and bring prices among the best, making income per acre among the highest in cash returns to the grower of any variety now being grown. ERLY-RED-FRE is not a new peach—Marketing records over the past ten years in all parts of the U. S. peach growing areas can verify our statements on this wonderful peach. IT CAN BE TRULY TERMED THE PEACH GROWERS FRIEND. ERLY-RED-FRE has and is proving year after year its worth to the peach growing world. WE ARE PROUD OF THE FACT THAT IT WAS BOUNTIFUL RIDGE NURSERIES WHO INTRODUCED ERLY-RED-FRE AND WE HOPE TO HAVE TREES OF THIS WONDERFUL PEACH PLANTED BY EVERYONE WHO IS GROWING FRUIT EITHER FOR HOME USE OR COMMERCIAL MARKETS.

PLAN AND PLANT ERLY-RED-FRE PEACH TREES THIS YEAR FOR GREATER GROWING AND CONSUMER SATISFACTION. START YOUR PEACH SEASON WITH ERLY-RED-FRE AND KEEP THE CONSUMING PUBLIC EATING PEACHES ALL THRU THE SEASON. QUALITY COUNTS.

INTRODUCING FOR FALL 1957 AND SPRING 1958 . . .

Another Bountiful Ridge Exclusive

REDWIN

(U. S. Plant Patent Applied For)

**AN AMAZING NEW SPORT OF THE ALREADY FAMOUS ERLY-RED-FRE
QUALITY . . EARLINESS . . COLOR . . HIGH PRODUCTION . . SHIPPING ABILITY**

**"WIN
WITH
REDWIN"**

**"WIN
WITH
REDWIN"**

REDWIN . . . picture taken of ripe fruits on two year old tree in June, 1956. REDWIN are the large, well colored fruits in center. Compare with size and ripening time of Cardinal on left and of Dixired on right...REDWIN should have a place in your planting.

WIN WITH REDWIN

WIN WITH RIPENING TIME . . . Imagine a peach similar in every way to ERLY-RED-FRE that can be marketed three weeks earlier. REDWIN is just this peach. It is a semi-freestone which ripens with or just before Mayflower. Early ripening REDWIN promises to start your season with a WINNER.

WIN WITH APPEARANCE . . . REDWIN looks most nearly like its parent, ERLY-RED-FRE, having a brilliant red splashed over a creamy, yellow ground. This combination has proven to have fine market appeal. REDWIN also is blessed with the shape of its parent which should make it an easy handling variety. REDWIN colors early and uniformly.

WIN WITH SIZE . . . REDWIN has been observed with trees in full crop during the second and third growing seasons with every one of the fruits being of large, marketable size. Compare this with any other variety of the REDWIN season and you will find another reason why we believe it to be so promising.

WIN WITH QUALITY . . . We believe REDWIN quality far exceeds that of any other peach of its season. Its quality and color promises to make it an outstanding buy.

WIN WITH SHIPPING ABILITY . . . REDWIN has the same tough skin, early color, and resistance to bruising as does the ERLY-RED-FRE. These facts lead us to believe that it will ship, worry free, to distant markets and receive a premium price. REDWIN also promises to be outstanding for fruit stand trade and local markets.

WIN WITH TREE VIGOR . . . REDWIN will probably prove the easiest grown trees in the orchard. High vigor helps them to be resistant to many of the insects and diseases which are a constant peril to orchard trees. Vigorous character is also quite a factor in its ability to bloom, set, and grow out a large crop.

WIN WITH PROFITS . . . REDWIN PROMISES TO BE A PROFIT WINNER TO EVERY GROWER WHO PLANTS IT. Redwin will produce fine, well colored, marketable fruits between 75 and 85 days after bloom. This means low cost of production; quite necessary for maximum profit.

WIN WITH REDWIN . . . This exciting new peach gives every promise of making the grade in a big way. It is a SEMI-FREESTONE with high quality, early ripening date, excellent vigor, outstanding appearance, and good size. All these things should make REDWIN A CONSTANT WINNER. REDWIN will be available for planting in commercial quantities FALL 1957 and SPRING 1958. PLAN NOW FOR ANOTHER WINNER IN YOUR PLANTINGS. "WIN WITH REDWIN".

REDHAVEN

Now A Tried and Proven Winner of Its Season.

Among the best for its season. Beautiful color, firmness, high quality, good consumer demand add popularity for this peach.

REDHAVEN is a cross between Halehaven and Kalhaven. We first observed this variety in 1939 and had our first fruits here in our test orchards in 1941. It colors a brilliant red and beautiful yellow. Skin is smooth, almost fuzzless, resembling J. H. Hale in color, skin and flesh. Flesh is very firm. Tree is vigorous with heavy bud set and bears young. Fruits medium sized and well filled when ready to pick, suture being rather prominent until peach approaches picking period. Growers may be inclined to pick too early because of good color and should watch this and when trees set too heavy, thinning should be practiced to increase size of the fruits. Trees are proving satisfactory in test plantings over a wide area.

It seems to be a few days later than Fisher; the flesh however is more firm and gives indication of being a good commercial peach to ripen before Golden Jubilee. We recommend applying fertilizer in early November or very early Spring on these early ripening types to help the early development of the fruits, also thinning should be practiced on Redhaven and Fisher when a heavy crop is set.

DIXIGEM

The DIXIGEM ripens several days ahead of the Golden Jubilee or about with Fisher and Redhaven. The fruit is medium size, ovate with light pubescence and a bright, attractive red blush covering about half the surface. The ground color is a bright yellow. The flesh is yellow, medium to firm, having a fine texture and excellent flavor. It is almost a freestone when fully ripe and is usually semi-free at shipping stage.

The trees of Dixigem have been vigorous and productive, sometimes requiring thinning of fruit, but generally do not tend to overbear. While Dixigem has mostly been fruited in Georgia and other nearby southern states, its characteristics of early ripening season, good size, near freestone, high quality, attractive appearance and good tree growth, recommend it for trial as an early yellow shipping variety for all peach growing sections.

JERSEYLAND (N.J. 135)

A NEW EARLY VARIETY TO PRECEDE GOLDEN JUBILEE

Introduced by the N. J. Peach Council as an early, large, firm, attractive yellow-fleshed freestone, ripening a few days before Golden Jubilee. It hangs well to the tree and is an excellent shipper. Tree is hardy, sets fruit buds freely and comes into bearing early. Recommended for trial in sections where early peaches are profitable.

THIS VARIETY HAS BEEN MARKETING AND IS CALLED BEAUTY GEM BY MANY GROWERS IN THE SOUTHERN REGIONS.

SUNRISE (N. J. 133)

This peach has been planted widely in N. J. and is proving very satisfactory as an early yellow fleshed peach ripening before Jerseyland. Fruits are well colored, semi-free, good size and trees are resistant to bacterial spot. Fruits are firm and nicely colored. It overlaps on Goldray.

RANGER

A fine looking yellow freestone peach ripening with or just after Golden Jubilee, formerly tested as B12160 and a seedling of Raritan Rose selfed. Medium to large size, almost round, with light pubescence, highly colored with bright red blush covering most of peach. Flesh yellow, medium firm, medium textured, good flavor and suitable for canning or freezing. Tree is vigorous and productive showing marked resistance to bacterial leaf spot. Blossoms medium sized, self fertile, usually open after Elberta. Ranger has been tested in Md. S. C. Ga., Tex., W. Va., and Dela. and should prove valuable in the central peach areas for local or commercial markets. This is a U. S. D. A. introduction.

CORONET

Formerly tested as FV 126-79, CORONET resulted from a cross between a seedling of Hale Haven selfed and Dixigem. Tested and released by U. S. D. A. June 1953.

CORONET ripens 2 to 3 days earlier than Dixigem or just before Redhaven. The fruit is medium size, highly colored, yellow fleshed tending to stick to pit when not fully ripe but a freestone when ripe. Bright, attractive red blush over good yellow ground color. Firm, smooth textured, very good but mild flavor. Coronet trees are vigorous and productive. Blossoms are small-petaled, self-fertile, chilling requirement about 500 hours or a little less than Elberta. This is a fine looking peach and a challenge to Redhaven in many areas, especially in southern peach sections and may replace Dixigem.

HILAND

A highly colored, yellow clingstone peach formerly tested as FV 123-41 and is the result of cross between Southland and seedling of Hiley by Halehaven. Ripens just before Cardinal or 5 days before Dixired. Blossoms large, opening just after Hiley. Buds require about 750 hours to break rest period. Tested mostly in Southern States. Vigorous and productive. Fruits medium size, ovate, light pubescence, attractively colored, with light red blush at shipping stage. Flesh yellow, fairly firm, medium textured, and of good flavor. Recommended where low chilling requirements are a factor. A U.S.D.A. introduction.

REDCAP

A Southland-Dixired cross formerly tested as FV 121-58. Ripens just before Dixired and resembles Dixired very much. A clingstone, medium size, round, with light pubescence, attractive red blush covers most of the peach. The flesh is yellow, firm but melting, medium textured and good flavor. Trees are moderately vigorous and productive. Blossoms are small petaled and self-fertile, opening with Southland. Buds only require 750 hours chilling requirements to break rest period like Hiley, Southland and Hiland. Tested mostly in Georgia, this variety shows real merit and should prove especially valuable where short rest periods are a factor. We have observed this variety for several years and can recommend it highly. A U.S.D.A. introduction.

CARDINAL

Introduced and released by U.S.D.A. during summer 1951.

Cardinal is a seedling of Halehaven selfed and formerly tested as FV 101. Ripens four days ahead of Dixired, more than two weeks before Jubilee. Fruits are clingstone, medium size, round, light pubescence. Well covered with attractive red blush over good yellow ground color. Flesh is yellow, firm, medium textured and good flavor. About size of Dixired, also in color, appearance and firmness. Blossoms medium sized, self fertile and open about with Elberta. Chilling requirements about 900 hours. Should succeed anywhere Dixired can be grown and has advantage of being earlier. We recommend this peach from what we have seen of it in past several years and where low chilling requirements are not a great factor as its quality and appearance will make it popular in many sections.

BLAKE (N. J. 117)

Widely planted in New Jersey and some other areas and seems to have grower and consumer approval. Named from the late Dr. M. A. Blake of the N. J. Experimental Station. Fruits are medium to large, very highly colored with attractive red over good yellow ground color. It is a freestone, having considerable red about the pit and extending to the flesh in some cases. Flesh is very firm and of excellent flavor. Trees are good growers, ranks with Elberta in hardness of bud and tree. The size, its bright attractive red coloring and season of ripening should make the Blake a desirable peach to precede Elberta.

As One of America's Leading Fruits, Peaches Continue to Be A Great Profit-Maker and General Favorite of Growers in Commercial and Home Plantings.

PROPER VARIETY AND TREE SELECTION WILL LEAD TO QUICKER RESULTS AND GREATER PROFITS AND SATISFACTION

LET US HELP YOU WITH YOUR PLANTING NEEDS THIS YEAR . . .

Come in or write and take advantage of this direct to the planter service.

SPECIAL NOTE

We want you to plant BOUNTIFUL RIDGE trees. Our trees are as good as can be produced. When wanting more than 300 peach trees, write to us giving list and we will quote you special prices consistent with market conditions at that time.

PRICES OF PEACH TREES

(STANDARD TYPES)

5-6', 11/16 up	\$2.25	\$1.85	\$1.20	\$1.00
4-5', 9-11/16	1.75	1.50	1.00	.85
3-4', 7-9/16	1.50	1.25	.85	.70
2-3', 5-7/16	1.25	1.00	.70	.55
2-3', 1/4-5/16	1.00	.80	.55	.45
18-24"	.80	.65	.45	.35

All prices are net f.o.b. Princess Anne, Md.

THESE PRICES APPLY ON ALL VARIETIES

The CARDINAL peach. A recent introduction of the U.S.D.A. proving very satisfactory as a very early yellow fleshed, semi-cling peach. See description on page 7.

NOTE

Ripening order of varieties designated by bracketed numbers after name. Varieties overlapping in ripening season indicated by sub-letter. Example: Elberta and Hale are about same season and are designated by numbers 11a and 11b.

MAYFLOWER (1) Earliest peach known. Dark red all over; beautiful appearance. Carries well to market. Size medium, quality fair. Hiland cling.

HILAND (2) See page 7 for full description.

REDCAP (2a) See page 7 for full description.

CARDINAL (2b) See page 7 for full description.

A view of our PEACH trees growing at Bountiful Ridge Summer 1956. Fruit growers visiting our Nursery say "They are the best trees we have seen" and they really are as good as anyone could expect to grow. You will like them. Let us help you plan your plantings.

DON'T GUESS — BUY BOUNTIFUL RIDGE TREES

DIXIED (2c) Dixied, a product of the U.S.D.A., is a clingstone, medium size, round with light pubescence. About three-fourths of the surface is covered with a bright attractive red blush. Flesh is yellow, firm but melting, medium textured and of good flavor. The outstanding characteristics of Dixied are its unusual firmness and slow rate of softening for an early peach, plus an attractive appearance. The fruit acquires color long before it is ready to pick. Dixied is recommended for trial as an early shipping peach.

ERLY-RED-FRE (2d) See outside front cover for natural Kodachrome color illustration. Full description on page 5 and 6. Prices for Erly-Red-Fre on Nematode Resistant Root Stock 10 cents extra per tree on all grades.

GOLDRAY (2e)

A NEW BUD SPORT OF THE FAMOUS GOLDEN JUBILEE PEACH. RIPENING TWO WEEKS EARLIER INTRODUCED BY BOUNTIFUL RIDGE NURSERIES SPRING 1950.

First observed by us during fruiting season of 1939 on the fruit farms of J. Roy Cunningham, Lancaster, South Carolina, the original planting being made from Bountiful Ridge grown trees.

THE SIZE, BEAUTY, QUALITY AND GENERAL CHARACTERISTICS WERE SO OUTSTANDING, RIPENING SO MUCH EARLIER THAN THE BALANCE OF THE GOLDEN JUBILEE TREE. WE FELT IT HELD REAL POSIBILITIES. We began testing the variety, and we are glad that it has proven even better than anticipated and we now pass it on to the patrons of Bountiful Ridge Nurseries with a sense of pride.

GOLDRAY fruits are large or larger than regular Jubilee. The quality is equal to Golden Jubilee. Goldray has a beautiful bright red blush on a real golden background. Goldray will cling to pit when not fully ripe and like regular Jubilee has a tender skin and flesh, being more adapted for home use, roadstand markets and nearby commercial markets. GOLDRAY TREES are very vigorous, making a heavy set of buds which in our tests have proven as hardy or more hardy than regular Jubilee resulting in very regular crops. PLANT GOLDRAY AND STEP UP YOUR GOLDEN JUBILEE SEASON.

SUNRISE (2f) See page 7 for full description.

EARLY EAST (N.J. 134) (2g)

By popular demand we add the Early East to our peach list because of its behavior in certain fruit districts. It is medium to large, yellow fleshed, ripening about 10 days before Golden Jubilee. The fruit attains an attractive red color and fair edible quality. It is hardy and productive. Ships well and is recommended for home and commercial plantings. Flesh clings to pit when hard ripe but becomes free when fruit ripens.

The **CORONET** peach. This is one for the grower to watch when considering early peaches. It is proving to be a mighty fine peach.

JERSEYLAND (3a) Full description page 7.

CORONET (3b) See full description page 7.

DIXIGEM (3c) For description see page 7.

REDHAVEN (3d) For description see page 7.

CUMBERLAND (4) The tree is a vigorous grower. The fruit is attractively colored with red, oval in shape. The flesh is white, almost free. Ripens just before Carman. Cumberland continues to gain in popularity in all peach sections.

GOLDEN JUBILEE (4a)

No general planting of peaches is complete without a Liberal Amount of Golden Jubilee Trees. See Color Illustration inside Front Cover Page.

A development of the New Jersey Experiment Station first offered by us during Fall shipping season of 1928. The Golden Jubilee is a second generation seedling of the Elberta crossed with the Greensboro. The tree is unusually hardy. The buds resist low winter temperatures better than Elberta and open later than Elberta which insures a regular crop. The blossoms are self-fertile. The peach is medium to large in size. The peach develops better if a well balanced fertilizer is used. As the tree grows older the fruit becomes firmer and develops more naturally.

THE FAIRHAVEN PEACH (4b)

Recommended for trial to lengthen Golden Jubilee Season and precede Halehaven.

Fairhaven is a cross between J. H. Hale and South Haven. Trees have shown no weakness to date and are vigorous and productive.

Fairhaven has the same tendency for heavy fruit setting as Halehaven and Redhaven. Fruits of Fairhaven are medium to large, round, bright golden color with attractive red check.

Skin smooth and tough. Fruit firm and ships well. The flesh is medium yellow with moderate amount of red around the pit, moderately fine textured and good flavor. It resists browning which is of great advantage in processing. A freestone.

RANGER (4c) See page 7 for full description.

KEYSTONE (5) Tested as FV 177-17, a cross of Newday X Southland, released July, 1954 by U.S.D.A. Keystone ripens just ahead of Triogem and after Jubilee. The fruits are large, highly colored, round light pubescence, bright golden ground color. Flesh is yellow, firm, smooth texture and of good flavor, and a freestone. Trees are vigorous and productive where tested, with less bacterial spot than Southland or Elberta. Blossoms are small-petaled, self fertile, opening about with Southland, requires 750 chilling hours to break rest period. Keystone would seem to be especially well adapted to the Southern Peach areas.

TRIOGEM (N.J. 70) (5a) An early, oval red all over, firm, yellow freestone peach ripening usually about two days after Golden Jubilee or 20 to 25 days before Elberta. The trees are medium in size, hardy and heavy bearers. Trees require good soil and good care for best results. For the past several years Triogem has fruited over a wide area and has gained in popularity due to heavy yields and good marketing traits. Hardiness of tree has been another factor for its increased popularity. It is well to remember however the tree needs heavy feeding and a good spray program for best results.

FAIR BEAUTY (5b)

HARDINESS—GREAT BEAUTY—HIGH QUALITY

Tree vigorous, spreading, very hardy in bud, often producing a crop when other varieties are winter killed. Fruit is medium to large in size, a deep golden yellow blushed with bright red, the flesh is firm, tender, melting and juicy. Fruit hangs exceptionally well to tree and when full ripe is a perfect freestone, clinging slightly when the peach is hard ripe, an excellent market and canning peach.

COLORA PEACH (5c)

An Outstanding Hardy, Early, Yellow Freestone Peach. High Color, Superb Quality, Size and Hardiness Are Reasons Why You Should Plant Colora. Introduced in 1936.

Our own introduction of a new frost resistant, yellow freestone peach. Second generation trees as well as the original branch have withstood temperatures during the past winters of about 17 degrees below zero, when most other varieties such as Elberta, Hiley Belle, Belle of Georgia, Early Elberta and J. H. Hale were wiped out by these low temperatures. The peach is an attractive yellow, freestone, well-colored and of excellent quality, ripening just after Golden Jubilee. Despite the fact that competition from other varieties ripening in the same season the Colora peach continues to gain in popularity in many sections of the country and we have sold out on trees early each year in spite of increased production.

VEDETTE (5d)

A product of the Vineland Experimental Station, Canada, proving unusually well adapted in the various peach growing sections of the United States. A seedling of Elberta, resembling that variety in color and type of flesh but is more globular in shape, more highly colored, and of finer quality. The fruit is yellow fleshed, freestone. The tree is vigorous, very hardy, and is very productive.

NEWDAY (N.J. 79) (5e) A large, oval, yellow-fleshed peach which begins to ripen a few days after Triogem. The tree is somewhat more vigorous and the fruit averages larger which makes the variety somewhat easier to grow for market. The fruit is showy, firm in texture and hangs well to the tree well.

The growers demand we again grow and list this variety. It is a good one for many sections.

GOLDEN GLOBE (N.J. 73) (5f)

Where the market demands a large peach this variety meets that demand. It is a very large, showy yellow peach of delicious flavor. Fruit hangs well to the tree. The tree is vigorous, upright and spreading. Fruit buds are somewhat tender under certain conditions. Usually a freestone.

SUNHIGH (N.J. 82) (6) A large, red, bright smooth peach, which colors well all over before it ripens, softens slowly, making it a good commercial peach. Flesh inclines to adhere to the pit when hard ripe, but is generally a freestone. The tree is spreading in growth and the dormant buds are hardy. The variety seems to do best in hilly sections and requires thorough summer spraying.

SOUTHLAND (6a)

A promising new yellow fleshed variety that looks very good to precede Halehaven. Don't miss out on this one.

The Southland has lived up to all predictions made for it. New Yellow Fleshed variety ripening in Hiley Season. Released by the U.S.D.A. July, 1946, and tested under No. FV 4-153. Southland is a seedling of Hiley Season selfed. It ripens about with Hiley or 16 days before Elberta. The fruit is a freestone, medium to large size, round and has little fuzz. The color is attractive with a light-red blush covering about half the peach at shipping ripe stage. The flesh is yellow, firm, slow softening, medium textured, good flavor. The trees are vigorous and productive, blossoms large and self fertile.

HILEY BELLE (6b) Like Elberta the Hiley Belle continues to hold a place which is unique in the peach world and its popularity is unquestioned. It is a medium size white freestone peach of Georgia Belle type, ripening two weeks earlier or about with Halehaven. Because of its fine quality and flavor, plus beauty of color it has been planted commercially and in home orchards for many years.

JULY ELBERTA (Burnett Elberta) (7)

A large, medium early freestone peach ripening with or slightly before Halehaven.

The fruit has a golden yellow color over spread with red which is most attractive. It can be picked for shipping about four days before ripening due to early color. The quality is excellent for canning and fresh eating. It shows better than average results when frozen. The variety does well in all peach sections.

REDGLOBE (7a) Tested as B7398, a cross between a seedling of Dewey X St. John and Fireglow, released by U.S.D.A. May, 1954. Redglobe ripens about 15 days before Elberta. The fruits are large, round, with light pubescence. The skin is highly colored with attractive red over good yellow ground color. It is a freestone and very free of red color in the flesh making it desirable as a canning and freezing peach. Very good quality. Chilling requirements are about same as Elberta, blossoms are large and self-fertile. Has been widely tested and very promising.

HALEHAVEN (7b)

North — South — East — and West Join in Acclaiming This Great Peach, Generally Recognized As One of Our Finest Peaches for "Quick Freezing."

We endorse and Recommend This Great Peach To Growers in All Sections Where Size, Color, Quality and Shipping Ability are Paramount Considerations.

We know of no peach of recent introduction that is proving more universally satisfactory than the Halehaven. It has proved an unchallenged leader of peaches to follow the Golden Jubilee, Colona and Vedette. The tree is a strong thrifty grower, resistant to common peach diseases, the fruit is large, oval shaped like a well grown J. H. Hale, it has a good tough skin, the flesh of the peach being of such texture that it will not bruise easily and best of all it has a beautiful red color that at once attracts the buyer and a flavor that is as good as the very best. The Halehaven is a product of South Haven Experiment Station in Michigan. **BE SURE YOU ARE GETTING THE TRUE STRAIN OF HALEHAVEN TREES WHEN YOU PLANT. BUY BOUNTIFUL RIDGE GROWN HALEHAVEN TREES.**

SOUTH HAVEN (7c) One of the earlier introductions of the South Haven Experimental Station. Very hardy in bud, good growing tree, large fruits of excellent quality and a freestone. Not so well adapted to long distance shipping but hard to beat for roadside and nearby markets. Golden yellow, meaty, delicious.

JULY HEATH (Othello Cling) (7d)

A large to very large white cling, ripening latter part of Hale Haven season and before Elberta, coming to us from Kentucky and very highly recommended by the Kentucky Experimental Station. A beautiful peach, strong growing tree and hardy in bud. Very high in quality. We can heartily recommend this peach to anyone desiring a white cling peach for all purposes. Sometimes called July or Summer Cling.

GOLDEN EAST (N.J. 87) (7e) A large, oval firm, melting, highly colored, yellow fleshed peach ripening with Hiley or about 15 days before Elberta. Usually a freestone. A promising variety for sites south of Central New Jersey where favorable elevations, soil and climate prevail. The tree is upright, spreading and vigorous. The dormant buds are medium in hardness. Worthy of trial in all sections.

VETERAN (8) A cross between Vaughn and Early Elberta; of Canadian origin. The fruit is large, oval shaped like a well grown J. H. Hale, it is like Elberta in quality. Ripens several days before Vedette.

ECLIPSE (8a) A self-pollinated seedling from Georgia Belle. A dark red, yellow-fleshed freestone peach of firm texture and good flavor, ripens with Hiley. Tree is very vigorous. The fruit is oval in shape, flesh fine grained and an excellent shipper; hangs well to the tree and can be harvested over a long period.

Peaches to Plant

QUALITY - APPEARANCE - PRODUCTIVITY

Varieties are listed in their order of ripening as near as possible and you can select varieties adapted to SOUTHERN-CENTRAL-OR NORTHERN growing conditions with the assurance you will have some of the best peach varieties available.

NEWCOMERS FOR FALL 1957 . . .

Potential Winners of The Next Decade

LORING Originated by the Missouri State Exp. Station at Mountain Grove, Mo. Resembles Golden Jubilee in color and shape, however, is much firmer and does not soften at the suture or tip. A large firm yellow fleshed freestone with attractive bright color of red and yellow over a yellow ground color. Ripens about two weeks ahead of Elberta.

TULIP Another Missouri introduction. Ripens six or seven weeks before Elberta and is the best extra-early yellow-flesh peach observed at the Mountain Grove Station. The fruit is medium to large in size, nearly round, and has good color. It has short fuzz, fine texture and excellent flavor. Has firm flesh and will stand shipping. A semi-freestone.

SUNHAVEN Result of cross made in South Haven, Michigan by Stanley Johnston in 1944. Matures ten days earlier than Red Haven. Fruit is large in size, nearly round and uniform in shape. Color much like Red Haven, largely bright red with stone ground color for attractive contrast. Fruits keep and handle unusually well for such an early maturing variety. Flesh clear yellow, fine textured, firm, of good flavor and resistant to browning. A partial cling until fully ripe. Trees are large, vigorous, and productive. Recommended for an early fresh market variety.

RICHHAVEN Also originated in South Haven, Mich. Richhaven gives promise of replacing the Hale Haven variety. Fruits large, uniform in size and shape. Color a bright red blush with stripes of red and gold laid over a bright golden brown color. Fuzz in noticeable, and an unusually thick tough skin adds to its handling and shipping ability. Flesh is a clear yellow with moderate redness about the pit. Entirely a freestone when ripe. Ripens with Hale Haven or fourteen days before Elberta.

N. J. 197 An attractive, yellow-fleshed peach ripening with Golden Jubilee. It is firmer than Golden Jubilee and the color is similar to Newday.

N. J. 157 A large, firm, yellow-fleshed freestone ripening three weeks before Elberta. A good peach to follow Triogen.

REDWIN See page 6 for full description of this startling new addition to Bountiful Ridges list of champions. This new sport of our Erlay-Red-Fre will have an outstanding place in your planting.

CHAMPION (8b) By popular demand we restore this variety to our list because of demand for a fine white peach in this season. The fruit is large, quite regular, yellowish-white mottled with red on sunny side; flesh white with red at pit. Very hardy. Freestone.

SULLIVAN'S EARLY ELBERTA (9)

Leads The Early Elberta Season

It is proving to be well adapted to the entire Central peach growing areas as well as Southern peach states.

The variety, found as a bud sport in the orchard of Mr. J. P. Sullivan at Zebulon, Ga. The tree and fruit characteristics were found to be identical with Elberta. Sullivan's Early Elberta is being planted extensively throughout Georgia and adjoining states. Our trees are propagated from the original strain.

It ripens ahead of the regular Early Elberta and Belle of Georgia; it averages large in size, extra fine quality and shows good shipping ability. We have long needed a good commercial peach to fill this ripening time. Sullivan's Early Elberta has real possibilities and we recommend it highly.

POPPY (9a) Introduced by Missouri Exp. Station resulting from a cross of Frank by Hale Haven. Its ripening season is eight days before Elberta. The fruits are large, shaped like Elberta, seems to size well with heavy crop. Poppy has an attractive red color, coloring well before peach is ripe. Fruits are firm, yellow fleshed, freestone of fine texture and flavor. A good shipping peach. Its season and general characteristics are such that it should have a place in most orchards.

REDCREST (N.J. 126) (9b) A large, attractive, yellow-fleshed freestone ripening about a week before Elberta. The skin color is a beautiful crimson red which resembles Sunhigh. The quality is supreme, flesh golden yellow, firm and juicy. Tree is productive and a vigorous grower. Redcrest is what is known as an airfree peach.

BLAKE (9c) See full description page 7.

EARLY ELBERTA (10)

A Great Commercial Peach Ripening Just Before Regular Elberta. The Genuine Gleason Strain.

A great commercial peach in the Central and Northern peach producing areas where the markets are not too distant and quality is a decided factor. One of the most beautiful of the Elberta type peaches. A large, attractively colored, yellow fleshed, freestone peach ripening with Belle of Georgia or from 3 to 8 days before the regular Elberta. The highest quality peach of all the Elberta types grown commercially. The trees are hardy, thrifty and bear consistently. The deep lemon yellow colored skin blushed with bright red makes it very attractive and the peach retains a beautiful golden yellow color after being canned. IF YOUR MARKET DEMANDS QUALITY AND BEAUTY PLANT THE EARLY ELBERTA. Our trees are propagated from the old original strain of Early Elberta—(Gleason Strain).

SUMMERCREST (N.J. 94) (10a)

A large, oval freestone peach of fine quality, ripening with Georgia Belle. The flesh is a deep golden yellow, melting and sweet. Tree is exceptionally vigorous, requiring light soil and very little nitrogen. Summercrest is hardy as J. H. Hale and adapted to regions having a climate similar to central and southern New Jersey.

BELLE OF GEORGIA (10b)

The White Peach That Has Stood the Test of Time and Stands Today as the Leader of All White Peaches of Its Season. Adapted to Large Commercial Plantings in All Peach Producing Areas.

Fruit large, bright, attractive red almost covering the peach with white background. Flesh white, highly flavored and very firm and known universally as one of the best shipping white peaches in cultivation. Tree very vigorous, hardy and productive. Are you planting to supply the demand for a good white peach? Plant Belle of Georgia. A freestone.

POLLY (10c)

A NEWCOMER — VERY HARDY WHITE PEACH FOR ELBERTA SEASON

The Polly peach was introduced by Iowa State College. It is very hardy bearing big crops after 20 below zero winters. It is a freestone of exceptional quality, with a keen peachy taste, juicy and aromatic. The color is a beautiful white overlaid with a rich red blush. Recommended to all growers who wish an exceptional white peach in Elberta season.

AMBERGEM (10d) A comparatively new canning peach with clear yellow flesh and very high quality, having good red blush. Ripens mid-season, large and a cling stone. Trees very thrifty. Buds are resistant to frost injury and a heavy bearer. The commercial canners favorite.

REDSKIN (11)

A New Introduction by University of Maryland Experimental Station (Bred and Tested as Md. 1-15).

The Redskin peach is a product of the Maryland University Experiment Station and is the result of a cross between Hale and Elberta. It ripens slightly ahead of with Elberta. The tree is vigorous, fast growing and productive. Wood is hardy and the buds survived the low winter temperatures of 1942-43 along with the hardiest varieties indicating that it is very bud hardy. The fruit of the Redskin is round, yellow flesh with little or no color near the pit. It is a complete freestone, firm flesh of excellent shipping quality, well covered with a deep red blush covering the fruit even when ripening under shady conditions. In taste, it is aromatic, vinous and sweet. Due to the firmness, it is rated high for canning. Fruit develops good size even with heavy load on trees.

This is one of the young orchards of Weedon Teets on near Winchester, Va. He has planted Bountiful Ridge trees for several years and has found them dependable. We are extremely proud of the many orchards and berry fields in Virginia and West Virginia which prove from their growth each year that IT PAYS TO PLANT BOUNTIFUL RIDGE GROWN TREES AND PLANTS.

ELBERTA (11a)

THE PEACH WITH A PEDIGREE

The World's Greatest Money-Making Peach

Plant Bountiful Ridge Tree Strain Elberta for greater profits and consumer satisfaction.

Without question, the greatest commercial peach ever introduced. It has proven its ability to adapt itself to varied climatic and soil conditions throughout the U. S. and Canada. Whether the climate is hot or cold, whether the soil is light sandy or heavy clay, Elberta can be depended on to give you fine results. There is no prettier peach when grown under ideal conditions.

The tree is hardy, disease resistant, very thrifty and very productive under most conditions. The fruit is large to very large, a freestone, skin of deep golden yellow and highly colored. The skin is tough and the flesh, while tender and juicy, is of such texture that the ELBERTA IS FAMOUS FOR ITS ABILITY TO CARRY TO DISTANT MARKETS. The quality is classed as good, and the slight bitter flavor is preferred by many. It is estimated that 50% of all peaches planted are Elberta. As improved types and varieties are introduced this ratio is lower but after all is said, ELBERTA STILL REMAINS THE WORLD'S LEADING COMMERCIAL PEACH. We are propagating our Elberta trees from selected orchards of great bearing records and to the old original type Elberta.

J. H. HALE (11b) A description will hardly do justice to this fine variety. In size it is one-half to one-half larger than the Elberta and is more highly colored. The skin is deep crimson, smooth tight, and almost without fuzz. Flesh is golden yellow, firm and has a most delicious flavor. The pit separates easily from the flesh. It is exceptionally valuable as a commercial peach owing to its unusual keeping qualities. Will ship nearly as well as an apple. Fruit ripens a few days before and with the Elberta but it will hang on the tree longer. Your planting is incomplete without it. Note—The J. H. Hale does not have an entirely perfect bloom, and to get the best results it should be planted with some other variety.

✓ **WHITE HALE (N.J. 63) (11c)** A large white fleshed freestone of good quality, ripening with J. H. Hale. Tree is vigorous. A fine white fleshed peach to follow Belle of Georgia.

✓ **AFTERGLOW (N.J. 84) (12)** Usually ripens 3 to 5 days after Elberta, therefore, often meets good, strong markets. Fruits are large, round, oval in shape and almost completely overspread with red. The flesh is yellow stained with red about the pit and is free. The trees are vigorous and rapid growers, the fruit buds appear more hardy than J. H. Hale where observed. Recommended for trial in most districts.

✓ **SHIPPERS LATE RED (12a)**

(Bountiful Strain)

Best of the Hale type Shippers Late Red. A Large, Productive, Handsome peach recommended to follow Elberta. Brings high prices.

A very large, very highly colored attractive red, yellow fleshed freestone and good quality peach of distinct Hale type. Ripens just after Elberta and J. H. Hale. A good shipping peach, extremely productive. Very hardy and its beauty and size enables it to bring top prices on the markets. This splendid variety should be planted more extensively as we know of no variety we can recommend more highly for a peach to follow the Elberta.

Much confusion exists regarding the various strains of this variety. We are growing the true type as determined by comparison with fruit in U. S. D. A. test orchards, which is known as the Hale type.

SHIPPERS LATE RED

Bountiful Ridge Hale Type has proven to be the finest of all Shippers Late Red Strains. A trial will prove it.

✓ **GAGE ELBERTA (12b)**

MR. PLANTER: Don't pass up Gage, it has everything a peach should have — size, quality and beauty.

A Disease Resistant Bud Sport of the Famous Elberta, Which We Recommend Highly.

Recommended for resistance to bacterium pruni. The tree grows as thrifty as the Elberta and looks much like the old time Elberta. Gage Elberta blooms from two to four days after Elberta and apparently has a very strong blossom setting a crop of fruit under unfavorable conditions. The fruit is so near like the Elberta that only an expert can distinguish the difference. Ripens two to three days later than Elberta.

THE BRACKETT PEACH (12c)

ONE OF THE BEST VARIETIES TO FOLLOW ELBERTA AND IT IS PROVING A GREAT COMMERCIAL PEACH.

This is a comparatively new variety in some sections, but has been tried and proven one of the most profitable peaches in the South and Central areas. Its season is about five days after Elberta, with a beautiful orange-yellow skin tinged with carmine. Flesh is a deep yellow and much lighter flavored than Elberta. This peach sizes up well under heavy crops and is equal to Elberta as a shipper. A perfect freestone and a real peach.

✓ **GEMMERS LATE ELBERTA (13)**

RINGS THE BELL — A WINNER

Now fruiting over a wide area, growers everywhere marvel at its fruiting ability, size, beauty and quality.

Beautiful color, large size, excellent quality, fine shipping and keeping ability combine in **GEMMERS LATE ELBERTA** to make it one of the most promising varieties we have ever observed to follow the Elberta season. Gemmers Late Elberta has what it takes to become a leader of its season.

It is a typical Elberta in fruit and tree characteristics. It ripens 8 to 12 days after Elberta, just following Shippers Late Red and before Lizzie and Sabrosa. There is a place here for a good Elberta type peach and we believe Gemmers Late Elberta will fill it. Fruits are very uniform, large, well covered with a brilliant red tough skin. Flesh very firm, being slightly tinged with red about the pit but red does not extend into the golden yellow flesh. Originating at Sussex, N. J., well up in the Mountains where many varieties of peaches fail to stand the climatic conditions, should recommend **GEMMERS** as a hardy variety both in tree and bud.

✓ **RIO-OSO-GEM (13a)**

Generally recognized as one of the better peaches ripening after Elberta.

WIDELY GROWN — A BEAUTIFUL PEACH

You can get the Genuine Rio-Oso-Gem now at Bountiful Ridge Nurseries, our budwood coming from fine fruiting orchards in New Jersey.

A **HALE TYPE LATE PEACH FOLLOWING ELBERTA 7 TO 10 DAYS. FRUIT LARGE IN SIZE WITH BRILLIANT RED COLOR AND LIGHT PUBESCENCE. THE FLESH IS FIRM AND FINE TEXTURED WITH EXCELLENT FLAVOR. BECAUSE OF ITS FIRMNESS OF FLESH IT IS FINE FOR FREEZING, CANNING AND OTHER USES. RIO-OSO-GEM IS ALSO AN OUTSTANDING COMMERCIAL VARIETY.**

Originated in California. Introduced under plant patent No. 84 in 1934. (Patent now expired).

✓ **LIZZIE (14)**

SIZE — FIRMNESS — FINE COLOR — EXCELLENT QUALITY COMBINE TO MAKE THIS PEACH A FAVORITE TO FOLLOW GEMMERS LATE ELBERTA

The origin of this peach has not been fully determined yet. It has been very successfully grown by commercial orchardists in N. J., Conn., and in several Southern states. It is a distinct Elberta type peach, large, freestone having a fine yellow flesh and the peach ripens very slowly after being taken off the tree. It ripens from 12 to 16 days after Elberta, colors well with a handsome red over a deep yellow undertone. The tree is thrifty, hardy, heavy bearer of regular crops. Some growers consider it the best of our present list of real late peaches.

✓ **AUTUMN (N.J. 145) (15)**

CONSIDERED ONE OF THE BEST VERY LATE VARIETIES

The latest, large, yellow freestone ripening fully fourteen days after Elberta. Later than Late Crawford, or Rio-Oso-Gem. The tree is a very vigorous grower and should be planted on well-drained good peach soil. For the grower who wishes good size, high quality fruit for road side stand or nearby markets, Autumn fills the bill.

Peach Trees on Yunnan Nematode Resistant Root Stock

YUNNAN Peach ROOT STOCK is proving almost 100% resistant to the devastating effects of ROOT NEMATODE. Every orchardist in those areas affected by Peach Root Nematodes should plant trees they know to be grown on Nematode resistant root stock. TREES GROWN ON YUNNAN ROOT STOCK MEANS: LONGER LIVED TREES IN THE ORCHARDS; LARGE CROPS AND LARGER FRUIT DURING THE ENTIRE LIFE OF THE TREE—RESULTING IN GREATER INCOME TO THE GROWER. TREES GROWN ON YUNNAN ROOT STOCK WILL MEAN THE REVIVAL OF PLANTINGS IN MANY SECTIONS WHERE Peach Root Nematode has made it impossible to grow a successful peach orchard in many sections of the Southern areas.

WHEN YOU PLANT TREES ON YUNNAN ROOT STOCK WE RECOMMEND

Your fertilization and cultivation practices should be such that your peach trees will go dormant early. The Yunnan root gives added vigor to the tree and naturally responds to fertilization and cultivation practices more quickly than trees grown on Lovell or seedling root stock. Cultivation should be stopped early and we recommend a split application of fertilizers; one being put on in fall after trees are defoliated and another in spring after danger of frost injury to blossoms and fruit are past and if you do not have a set of fruit you do not need to apply a spring application unless your soil is very thin and your trees show lack of vigor.

WE REGRET . . .

That We Will Not Have Trees On Yunnan Root stock For Sale This Year. This Situation Was Caused By The Spring Freeze Of 1955 Which Completely Destroyed Our Seed Crop. HOWEVER, WE WILL HAVE TREES ON YUNNAN NEMATODE RESISTANT STOCK FOR FALL 1957 and SPRING 1958.

WE DO HAVE A NICE SUPPLY OF YUNNAN SEEDLINGS FOR THIS FALL AND NEXT SPRING SHIPMENT. These are good healthy nursery grown seedlings which will enable you to continue your plantings or replacement program where necessary. These seedlings will satisfy when top-worked or budded properly.

TRUE YUNNAN SEEDLINGS now offered for your Planting and Budding

We have had some demand for Yunnan seedlings and in view of the quantity of this type of seedlings we are now growing, we are pleased to offer these to our friends so that they may bud any varieties they wish (excepting PATENTED VARIETIES) on them after planting them in their permanent location. PRICES ARE AS FOLLOWS. Only order in quantities offered.

Prices per seedlings	10	25	50	100		10	25	50	100
18 to 24 inch	.25	.23	.20	.12	30 to 36 inch	.35	.33	.30	.22
24 to 30 inch	.30	.28	.25	.18	3 to 4 ft.	.40	.38	.35	.28

OUR SUCCESS STORY — IT CAN BE YOURS, TOO.

In just a few short years . . .

FROM THIS TO . . .

This is a picture of our peach seedling block which we budded this summer. Trees from this block will be for sale the fall of 1957 and spring of 1958. Trees with such a beautiful beginning must surely bring long time satisfaction and results.

. . . THIS

At right is pictured an orchard of Bountiful Ridge trees growing in eastern Virginia. They have been heavy croppers for years and have brought everlasting satisfaction. They, too, had their beginning from the same type of seedlings as pictured and are worthy of your trial. Bountiful Ridge trees do bring results wherever planted. Plan on setting some this year in your new plantings.

RICHARED

TRADE MARK REG. U.S. PAT. OFF.

The DELICIOUS Supreme

IT'S SUPERB QUALITY — BEAUTIFUL BRIGHT
SOLID RED COLOR
TYPIFIES ITS NAME "RICHARED"
CASH IN ON AMERICA'S MOST
POPULAR APPLE

The **RICHARED DELICIOUS** is a blood red mutation of the famous Delicious Apple. Facts about the **RICHARED**: You have a tree of the same hardy characteristics as the old Delicious, producing an apple with that same appetizing, delicious flavor, producing an apple that colors a full bright red, without a trace of stripe, on every part of the tree, the apple attaining this color weeks before we usually pick the regular Delicious, thus enabling everyone who grows it to eliminate the loss from drop apples, to pick earlier, to market earlier, if he desires to do so to seek a foreign market with a high quality apple that has superior carrying qualities when picked early and to keep it longer in storage for our late markets if desired.

The higher prices received for the fruit of the improved strain of the Delicious apple prove that the grower can "CASH IN ON AMERICA'S MOST POPULAR APPLE WITH THE **RICHARED DELICIOUS**" and you should plant this year for the future markets when quality and beauty of fruit will prevail.

See prices on page 17.

RUBY

A PROMISING LATE KEEPING APPLE

A recent introduction of the Ohio Experimental Station resulting from a cross between Gallia Beauty and Starking Ruby, as its name implies, has great eye appeal because of its strikingly brilliant over-all carmine red resembling somewhat a well colored Gallia Beauty. The tree resembles Rome in growth, bears early and tends to produce annually, blooms about with Rome or Gallia and just after Delicious. Picking date is about with Rome or may be picked just before Stayman. As a dessert apple the flavor is good, surpassing that of Rome Beauty. It is somewhat juicy, neither sharp nor sweet but pleasantly mild; cooking does not detract from the flavor but seems to improve it, whether baked or stewed the flesh has tendency to hold its shape well. Fruit does well in storage into April and May, being less susceptible to scald than Rome Beauty. Can be recommended for planting anywhere Rome and Delicious succeed. Can supply in one year trees only.

PLAN AND PLANT BOUNTIFUL RIDGE GROWN
ONE YEAR OLD APPLE TREES THIS YEAR. THEY
GIVE QUICK AND SATISFACTORY RESULTS.

FRANKLIN

A NEW AND PROMISING APPLE

Coming From Ohio Experimental Station.

For 15 years the Franklin apple variety, introduced by the Ohio Experiment Station, has been under continuous observation. It is a resulting seedling obtained by fertilizing McIntosh flowers with Delicious pollen. The fruit flesh is faintly yellow, fine grained. It is mild, moderately juicy, not quite as sweet as Delicious but with rather more character than McIntosh, being intermediate between the two, with a pleasing aroma. Franklin excels both parents in appearance having a brilliant red overcolor, resembling Delicious, with a golden yellow under-color, with very distinct bloom. Fruits are medium to good size, oblong in shape. Franklin is notable for fresh dessert quality which is best from late October to early January, being definitely a fall and early winter apple. Blooms about with Delicious, Jonathan, Rome, ripening a week earlier than Delicious and a little later than Jonathan. It is a heavy annual bearer where properly pollinated, fruiting all over the tree as in McIntosh. Should thrive wherever Delicious, Jonathan and McIntosh can be grown.

LARGE ORDER TO OHIO GIVES SATISFACTION

Laurelville, Ohio, February, 1936

The trees arrived in good condition. Thanks for sending very nice trees.

Laurelville Fruit Company

EARLY RED STAYMAN

(NEIPLING'S)

INTRODUCED BY US FALL 1942

One of the Finest of The Stayman Sports We Have Found. Gives Full Color on Apples All Over the Tree.

Appealing red color all over the apple two weeks earlier puts this apple to market at greater profits.

Observations covering many years prove Neiplings to be superior to other Red Stayman we have found. You will not go wrong when you plant this strain of bright Red Stayman.

Colors 100% all over the apple from 10 to 20 days before the regular Stayman. Growers can pick the entire crop at one picking if desired and avoid losses. Relieves the large grower of Stayman of his picking problem. Cold storage tests show it will keep through to following May and come out with less scald, more flavor and more snap than any other type Stayman. It's different—it's what you want—it has that natural full bright Stayman finish. Originated with the late F. S. Neipling, Waterford, N. J., and was discovered among the first trees he planted of Blaxstayman in 1929.

THE FRUIT COLORS A BRILLIANT, ATTRACTIVE RED ripening early and having its brilliant, bright red color, we recommend it for all Stayman producing areas.

WE OFFER THIS FINE APPLE AT THE SAME PRICES PER TREE AS OTHER STANDARD VARIETIES LISTED ON PAGE 17.

The "COLORA" Red York

Plant Patent No. 168

The "COLORA" Red York Marks A New Era For
The Great York Imperial Apple.

Earlier Coloring, Earlier Picking, 100% Color and
Greater Profits.

The Cammers' Choice Over All Other Types. Does
Not Train Juice or Other Products.

The tree of the **COLORA RED YORK** has the same rugged characteristics as the old type York Imperial. The production of the York Imperial type apple, giving to the growers fruit that will color 100% over the entire tree under most any condition. The "COLORA RED YORK" can be picked from one to two weeks earlier than the regular York Imperial if desired and the entire crop can be picked at one picking if desired with every apple pack out a Fancy Grade of Apples. The variety has been well tested and even though we have observed other variations from the old fashioned York we do not know of any today that will give the grower the same attractive York type apple that the **COLORA RED YORK** will produce. The original tree stands in the orchard of Mr. Lloyd Balderson, Colora, Maryland, among other York Imperial trees at about 300 foot elevation. See inside back cover for color illustration.

Bountiful Ridge

Nurseries

Are Famous For Adaptability, Rapid Growth and Productivity

BOUNTIFUL STRAIN

IMPROVED WINESAP

A Glorified Selection of the Famous Winesap Comes to the Planter with the same Beautiful Color—Same Quality—Same Keeping Ability.

"Seek and ye shall find" is the motto at Bountiful Ridge in their search for New and Better fruits. For years fruit growers from many sections have clamored for a LARGE WINESAP APPLE. Many types have come to our observation and when traced down were found wanting until Mr. Harry W. Miller, President of The Consolidated Orchard Co., Paw Paw, W. Va., told us of this type they have producing in their well known Martins Mountain orchard and which when investigated proved to be more than he claimed.

The original tree stands in a block of the Regular Stayman and has not failed to produce a heavy crop now for over 25 consecutive years, the fruits being as large or larger some years than the regular Stayman on adjoining trees.

The fruit has every characteristic of the Old Winesap in shape, color, quality and growth habits and at harvest time, Mr. Miller has been able to pack most of the apples in the 2½" up size, the balance going into the 2¼" grade. The tree is a typical Winesap tree in growth, having the exact leaf marking of the old Winesap. The Miller Bros. are better known as the "Pioneer Orchardists of West Virginia" and are producing more apples than any other individual or family group in the State today. We are proud that approximately 70% of their producing orchards are trees we grew for them. They are known almost nationally as authorities on fruit production and varieties. It is fitting indeed that an improved type of the Famous and Nationally known Winesap apple should originate in their orchard.

BLAXTAYMAN

(Trade Mark Registered U. S. Patent Office)

The Blaxtayanman Surpasses Most Other Improved Strains of The Stayman.

Each Succeeding Year Brings Added Praise For The Blaxtayanman

Its Fruiting Record Has Established The Blaxtayanman Generally as One of Our Good Commercial Apples

The BLAXTAYMAN was introduced to the Eastern Fruit growers, spring of 1930. In the BLAXTAYMAN we have every characteristic of the famous Stayman apple with the exception that THE FRUIT COLORS A BEAUTIFUL SOLID RED. The fruit is equally as large or larger than the regular Stayman. The trees are equally as thrifty as the regular Stayman. The apple has a SLIGHTLY TOUGHER SKIN WHICH TENDS TO MAKE IT KEEP BETTER IN STORAGE AND CARRY BETTER TO THE MARKETS. THE APPLE HAS THE SAME SHAPE AS THE OLD STAYMAN. THE FLESH FINER IN TEXTURE AND MORE MILD IN FLAVOR WHEN GROWN AT LOWER ELEVATIONS THAN THE OLD STAYMAN. Because of the Earlier Coloring and Solid Red Color the grower can pick the fruit earlier if desired. The BLAXTAYMAN will not get a dark and unattractive color if allowed to remain on the tree but instead the apples become more brilliant and beautiful. Prices on page 17.

BUY BOUNTIFUL RIDGE GROWN FRUIT TREES AND BE SURE

That you are buying the best that money can buy. Pictured here are our new spraying machine designed and bought especially for the meticulous care of our stock. At left, it is in the process of spraying our seedling stock using the extended boom for better coverage. The picture on the right shows it being used to apply a general spray to the growing one year apple. See the fine coverage it gives. Also note the nice growth which the trees are making. Operations such as these are characteristic of the way Bountiful Ridge trees are grown.

The IDARED Apple

First to be named of the many crosses made at the Experimental Station at Moscow and Branch Station at Parma, Idaho.

A CROSS BETWEEN WAGNER AND JONATHAN. Its season is with or a little later than Jonathan. Fruits are medium to large, stems medium long, slender; cavity broad, deep; calyx small, basin shallow. Strikingly beautiful bright red color. Skin smooth, medium thick, waxy; dots sparse, inconspicuous; rich yellow undercolor. Fruits hold form as well as Rome when baking. Creamy white, smooth textured flesh. Tree form resembles Jonathan, more upright, spreading, seems rather resistant to blight. A regular bearer. Trees limited for spring 1937. See Relative Ripening time page 19.

Sectional view of another block of Bountiful Ridge Grown one year old apple trees. Picture taken August 20th and to 6 ft. tall. We have many thousands of these fine trees trees have 2 months yet to grow. Nearly all of them are 4 here at Bountiful Ridge this year. Ideal orchard trees. Plan and Plant Bountiful Ridge grown trees this year.

WRIXPARENT

U. S. PLANT PATENT NO. 388

1. EARLINESS—Ripens 10 to 15 days before Yellow Transparent.
2. ANNUAL BEARER—Normal to heavy crops each year.
3. LARGE SIZE—Apples under normal conditions pack out 2½" and 2¼" size and up.
4. QUALITY—Unexcelled as an early cooking apple.
5. SHIPPING ABILITY—Does not show bruises, will carry to distant markets, and will keep for weeks.
6. TREE IS SEMI-SPREADING IN GROWTH HABITS.

BRIGHT RESISTANT COMES INTO BEARING EARLY.

Found as a chance seedling in the Yellow Transparent orchard of Mr. Wrixham McIlvain, near Magnolia, Delaware, about 1920.

Mr. McIlvain after several years' observation, determined the variety to be superior in every way to the Transparent. 2nd generation orchards have produced heavy crops. A third generation orchard was planted in 1935 and began bearing at 4 years of age. The tree is more spreading than Transparent and hardy in wood, not being subject to blight and other fungus diseases. The fruit averages large in size, being a little more flat in shape than Transparent and packing out commercial size of 2½" and 2¼" at picking time. The Wrixparent ripens from 10 to 15 days before Yellow Transparent and ripens its fruit evenly so that the entire crop may be harvested in two pickings if desired. It is an attractive light green color without markings; its flesh is white crisp, sprightly, very fine in texture and does not bruise readily. Sub-acid in flavor and unsurpassed as a cooking apple.

General List of Apple Varieties and Prices of Apple Trees

BOUNTIFUL RIDGE NURSERIES

One of America's Leading Nurseries - Selling Direct to the Planter

HAVE PROVEN THEIR LEADERSHIP IN PRODUCING SUPERIOR TREES THAT GIVE UNIVERSAL SATISFACTION AT PRICES THAT REPRESENT AMERICA'S GREATEST VALUES IN NURSERY STOCK

Thrifty—Hardy—Dependable True To Name Planting Stock Leads To Success

WE HAVE A VARIETY FOR EVERY LOCATION, SEASON AND PURPOSE

In figuring prices you may combine all varieties of apple to get advantage of large quantity rate.

APPLE TREES (Prices are per tree).

All prices are net f.o.b Princess Anne, Maryland

SPECIAL NOTE: WE WANT YOU TO PLANT BOUNTIFUL RIDGE GROWN APPLE TREES. If you want more than 200 apple trees write to us giving full list of varieties and grades desired and we will quote you special prices consistent with market conditions at such time.

Our Trees Are Inspected For Trueness-To-Name

**THERE IS NO GUESS-WORK WHEN YOU PLANT
BOUNTIFUL RIDGE GROWN STOCK**

The World's Most Eminent Authorities on Tree
Identification Say Bountiful Ridge Trees Are "True-
to-Name."

Amherst, Mass., July 12, 1956

TO WHOM IT MAY CONCERN:

All salable apple, pear, plum, sweet cherry, and 2 year
sour cherry varieties propagated and now growing at
Bountiful Ridge Nurseries, Princess Anne, Maryland, have
been examined by the Massachusetts Trueness-to-Name
Inspection Service. To the best of our knowledge, these
trees are true to name as they now stand in the nursery
row.

Massachusetts Trueness-to-Name
Inspection Service

NOTE

The ripening order of varieties is designated by bracketed number after the name. Varieties overlapping in ripening season are indicated by subletter. Example: McIntosh and Cortland are same season and are designated as by numbers 9a and 9c. We are endeavoring to give the ripening order and not the picking order as this will vary greatly according to the grower and where they are marketed. Many of our green apples are picked early for cooking purposes. Other highly colored red apples are marketed long before actual ripening time and again soil, fertilization and climatic conditions will cause a variation in ripening season. We trust this listing will be helpful to you. We have endeavored to make it as authentic as possible.

WRIXPARENT (1) See description on page 16.

CRIMSON BEAUTY (2) Originated in Maine. Very hardy, strong grower and very productive; extremely early bearer, ripens very early. A handsome red apple. Flesh sub-acid, pleasant to eat out-of-hand. 2 yr. trees only.

Yellow Transparent (2a)

Holds a long record as our most widely planted early commercial apple. Tree grows upright, hardy, early bearer, good size, skin clear white to pale yellow in color. Flavor very good. Is an excellent cooking apple known to the housewife everywhere. Ripens early July.

The New "Close" Apple (2b)

A product of the U.S.D.A. Bureau of Plant Industry, developed by Prof. C. P. Close.

This variety ripens with or slightly ahead of the Yellow Transparent. It appears to adapt itself over a wide growing area. The fruit is medium to large size, averaging 2½", fair to good quality, suitable for both dessert and cooking. The tree is vigorous, productive, annual bearer.

SOIL BUILDING PRACTICE AT BOUNTIFUL RIDGE

Corn, drilled with grain drill, being turned under as it comes into tassel, puts tons of humus into the soil. This is one of our crop rotation practices before planting to Trees. This corn is more than six feet tall.

**YOU CANNOT GO WRONG WHEN
PLACING YOUR ORDER WITH
BOUNTIFUL RIDGE NURSERIES.**

THE LODI APPLE—Photograph of Lodi Apple on tree in experimental orchard of University of Md. Note size and uniform shape.

LODI (Big Transparent) (3)

LODI IS ONE OF OUR BEST EARLY APPLES

Large Size, Firmness and Early Bearing
Habits Recommend It

The Lodi after being tested over quite a large territory is proving to be one of our most worthy Early Apples. It has the same quality and flavor as Yellow Transparent, but is much larger and more firm. The tree is more spreading and vigorous, bears early and more regular than Transparent. The fruit is a better shipper and does not show bruising as badly. It ripens a few days later than Transparent but due to size can be picked with that variety if desired. Lodi should be interpreted for best results as it needs cross pollination.

ANOKA (3a) One of Prof. Hansen's hybrids and noteworthy for its beautiful red striped fruit and early bearing, often producing apples the second year after planting. This apple comes to us highly recommended. Fruit medium quality; ripening shortly after the Transparent. It is worthy of trial. It should be more adapted to the central and northern districts than to the eastern seaboard fruit sections. 2 yr. trees only.

WILLIAMS' EARLY RED (3b) Among the earliest to ripen and the largest of all early apples, a better name for it is "Big Red Apple." Flesh is white juicy and slightly tart, tender and crisp. A very good one, like Transparent bears heavily on young trees.

EARLY HARVEST (4) Medium to large, pale yellow, beautiful, fine flavor. Tree moderate, erect grower, good bearer. 2 yr. trees only.

EARLY MCINTOSH (4a)

LEADS THE PARADE OF THE MCINTOSH TYPES
WELL ADAPTED TO COMMERCIAL MARKETS

McIntosh Hybrid being almost red in color, very crisp McIntosh. A thrifty grower and a regular bearer. Your opportunity to have the McIntosh type as a very early apple. Cash in on the popularity of the McIntosh by growing Early McIntosh for your markets.

STARR (4b) One of the finest early apples grown in New Jersey. Can be picked over a long period of time; large and of a fine yellowish color; a great bearer and a valuable market variety; comes into fruiting very young.

NEW JERSEY NO. 2 (4c)

Large size, heavy bearer, vigorous grower of the Starr season. Ripens slightly later than Starr and seems to be worthy of trial in areas where the Starr can be grown successfully. The apple when ripe most nearly resembles Starr in shape and color.

RED GRAVENSTINE (5) This favorite of many years ago as a summer apple of fine quality and shipping ability is now offered in a Red Strain. Large, well colored with slightly yellow flesh, fine quality. Tree vigorous and productive. Ripens somewhat irregular and should be picked several times.

MILTON (6) Typical McIntosh, coloring full red; very good quality, about equal to McIntosh, being same textured apple. Tree hardy and vigorous. Ripens three to four weeks before McIntosh or just before Wealthy.

RED WARRIOR (6a)

It's beautiful all-over bright red color, large size, excellent quality should make it a leader.

The tree is normally vigorous, grows naturally well formed similar to McIntosh and bears regularly. The fruit is large, normally averaging better than three inches. The skin is smooth and colored a brilliant red from stem to calyx, and does not bruise easily. Its ripening season is about with Wealthy or a little earlier. It is sub-acid in flavor and is an excellent cooking apple. The apple is shaped nearly like a Stayman, being a little longer from calyx to stem.

THE RED WARRIOR APPLE

WEALTHY (7) This beautiful, moderate sized, brilliant red apple is of fine quality; one of the best of its season. It is a relatively good keeper, and owing to the hardness of the tree, its adaptability to cold climates and early bearing habits, it can be profitable as a filler.

SUMMER RAMBO (8) Large, flat, streaked red and yellow, very tender, juicy and fine flavored. Tree very vigorous semi-spreading grower, hardy and productive.

GLENTON (8a)

SIZE—BEAUTY—PRODUCTIVITY

combine to make a marvelous apple to follow Wealthy

Reports coming to us from growers have been very enthusiastic over the behavior of the Glenton and the ready sale the apples enjoy. We unhesitatingly recommend it for trial in all sections, believing the apple grower will find it a valuable addition in every way.

The Glenton is a seedling of the Northern Spy, ripening with or just after the Wealthy.

The trees are vigorous growers and annual in bearing habits.

The fruits are medium to large and average a good three inches when well grown.

They are highly colored with attractive red and are of good quality for either cooking or eating.

IMP. ALL RED MCINTOSH (8b)

ADDED BEAUTY TO A FAMOUS APPLE
EARLIER COLORING—SOLID RED—FANCY FRUITS

A special selected strain of the famous McIntosh apple, coloring a solid red without a trace of stripe. Without question this is the best type of McIntosh that has come to our attention and will say that if you are not getting sufficient color on your present plantings of McIntosh you should make your new plantings of this Improved Type this year.

MCINTOSH (Black Mickey) (8c)

IT IS A TYPICAL MCINTOSH APPLE

Every grower of the McIntosh apple should watch the progress of this type McIntosh. Coming to us from the middle west, it has all the tell tale markings of the McIntosh in Tree, Productiveness, Hardness BUT HAS MUCH MORE COLOR AND STILL RETAINS THE SIZE OF THE OLD TIME MCINTOSH. IT HAS GREAT POSSIBILITIES FOR EVERY GROWER OF THE MCINTOSH APPLE. Ripens same season.

One Year Trees Available only for Fall 1956—Spring 1957

LOBO (9) About same season as the McIntosh, larger apple, and colors a more full red than regular McIntosh. Extra good quality. Tree equal to McIntosh. Comes highly recommended to replace the regular McIntosh for the Middle Atlantic and Southern growers.

MCINTOSH (9a) A choice variety of the Famous type. Tree is long lived bears young and annually. Fruits medium to large, highly perfumed, almost covered with brilliant crimson, flesh snow white, crisp, very tender, slight aromatic, sub-acid; high quality. A beautiful apple. Ranks as one of the greatest general purpose home and commercial varieties ever introduced.

KENDALL (9b)

BECOMES MORE POPULAR EACH YEAR

Growers Praise Its Beauty—Size—Quality
Ability To Hang On Tree.

Of all the McIntosh seedlings originated at Geneva it is by far the most attractive. It is handsomely colored over the entire surface with dark red, covered with a rich bloom. Its season is about that of McIntosh, but it keeps a little longer. The apples are large and possess the whitish, fine-grained flesh of McIntosh. The flavor is much the same but more sprightly than that of McIntosh. The apples hang better than McIntosh.

CORTLAND (9c)

Noted for its Vigorousness and Productiveness. A McIntosh Type for Central Apple Areas. Popular for Interplanting and Pollenization.

Cortland is an improved McIntosh type. The fruits of the two varieties are similar but those of Cortland are more oblate, average larger, and are more uniform in size; they have more color and the red is lighter and brighter and the striping and splashes are laid on differently; the taste of Cortland can hardly be distinguished from that of McIntosh; the flesh is firmer but just as juicy; the apples do not drop so readily and ship better.

SMOKE HOUSE (10) Comes into bearing moderately young. It has a thin skin of yellow, striped with rather a dull red and is very attractive. A favorite of the home orchard.

Improved All Red Jonathan (10a)

HIGHER COLOR ADDS TO POPULARITY OF THIS
FAVORITE OF THE CENTRAL AND NORTHERN
APPLE DISTRICTS

A special bud selected strain of the famous Jonathan apple. We hunted a good while before we found what we considered the right type of improved Jonathan apple to offer our customers. We have a fine lot at this time to sell and if you are not getting enough color on your Jonathan, plant this improved strain and you will be well satisfied with the results. Not as well adapted to pollenization purposes as the regular Jonathan.

JONATHAN (10b)

PRODUCTIVENESS, QUALITY, PLACES IT FIRST
AMONG APPLES OF ITS SEASON
ADAPTED TO HOME, DOMESTIC AND
FOREIGN MARKETS

The Jonathan is justly one of our greatest commercial apples. It is hard to equal for hardness and productiveness. The apples are smooth and attractively colored, being medium in size. The flesh is firm, crisp, tender, juicy, good quality. An excellent cooking or eating apple. Used extensively as a filler and pollenizing or eating apple. It is especially adapted to the Central and Northern fruit districts. No commercial orchard of the North is complete without the Jonathan for a late fall apple.

THE FAMOUS MCINTOSH APPLE

Through scientific cross breeding and careful selection of bud mutations, we now offer a McIntosh type to cover the entire harvest season and which can be grown over a wider area than ever before meaning larger profits to the planters.

CORTLAND

Large size, heavy crop, good pollinator, vigorous grower, good shipper, — fast becoming the growers' choice of the McIntosh types.

GRIMES GOLDEN (10c) An apple of the highest quality. It is one of the fancy dessert apples and ranks with Delicious and Jonathan on the market. Medium to large; bright yellow; flesh fine grained, juicy, with a very pleasing spicy flavor. The tree is hardy, grows upright and is quite disease resistant. Highly recommended and widely planted to pollenize self-sterile varieties.

FRANKLIN (10d) For full description see page 16.

IDARED (10e) For full description see page 15.

TWENTY OUNCE (11) Fruit exceptionally large, juicy and crisp, sub-acid, color green with slight blush and red stripe. Tree thrifty and very productive, generally recognized as our best summer baking apple.

OPALEScent (11a) Very large, brilliant dark red all over. Tree bears young and very prolific. Average quality. Its size and beauty recommend it for planting in Central and Northern areas.

NORTHWESTERN GREENING (11b)

Tree vigorous grower, quite hardy. Fruit large to very large; green, becoming yellowish-green when ripe; flesh yellow, fine grained and firm; flavor good, sub-acid; very smooth and attractive. 1 yr. old trees only.

YELLOW DELICIOUS (12)

ITS UNIQUE QUALITY—EARLY AND CONSISTENT
HEAVY BEARING HABITS AND BEAUTIFUL
GOLDEN COLOR GIVES THIS APPLE
ADDED POPULARITY EACH YEAR.
ESPECIALLY ADAPTED TO
ROAD STAND MARKETS.

This apple has received national publicity during the last few years and is famous for its unique quality, embracing a combination of flavors which is hard to equal. This combined with the fine, firm textured flesh of the apple and the beautiful, golden yellow skin at once attracts the eye of the consuming public. The tree, while not a large growing type, is thrifty and extremely productive, coming into fruiting and giving an abundant crop while very young. We are offering this splendid apple to our customers at the same price as all other varieties listed in our General Catalog. This apple should be picked at just the right period and placed in cold storage for late winter use.

MACOUN (12a) Very highly colored, having no stripe. Same quality as McIntosh same textured fruit, hangs to the tree better than McIntosh and ripens one to two weeks after Cortland. Tree about equal to McIntosh, a regular bearer, and strongly recommended to lengthen the McIntosh season and give the Middle Atlantic and Southern growers a McIntosh type fruit they can grow successfully.

RICHARD DELICIOUS (12b)

DOUBLED RED DELICIOUS (12c)

Early Red Stayman (Neipling's) (13a)

RHODE ISLAND GREENING (14)

The apples average large to very large, skin smooth and colors a bright attractive red over the entire apple. Flesh firm, quality is good but cannot be classed as a high dessert apple. The value of this apple lies in the fact that it will not crack under normal conditions.

✓ **MELROSE** (15a)

A New Late Keeping Winter Apple

Tree bears moderately young, is upright, spreading with good crotch angles and develops to reasonably large tree.

7 **BLAXTAYMAN** (16) See full description on Page 15.

STAYMAN WINESAP (16a) Without ques -

profitable apple ever grown in the fruit producing areas of the Central States. Tree vigorous, hardy, spreading. An early bearer and very productive. Fruit medium to large size, round approaching conic; skin smooth, slightly striped. flesh firm, tender, juicy, rich, sub-acid, aromatic, quality the very best. A splendid late keeping variety.

✓ Improved Double Red Stayman
(201 Type) (16b)

One of the newer introductions which has found favor with some growers. Tree and fruit characteristics similar to Blaxtayanman except it has a more brilliant color which lays on earlier and does not get the dark shade often found in some Stayman types. Our observations show this type to compare very much with our Early Red Stayman.

RUBY (16c) For full description see page 16.

WINTER BANANA (17) Vigorous grower; early bearer. Fruit medium to large, smooth and handsome golden yellow, usually shaded with red blush; flesh fine grained, rich sub-acid, aromatic; highest quality.

BALDWIN (17a)

Hold Your Baldwin Market With Collier Strain—The Best Type We Have Found For Size and Color.

Buds were selected from one of the finest producing Baldwin trees ever observed, and comes from the Charles Collier Fruit Farm at Claverick, N. Y. No type yields larger crops, bears shipment better or is more attractive in color, size and shape than the Collier Baldwin. It is esteemed as an eating apple and for cooking.

PLEASE NOTE

Heavy sales of two year and one year old apple trees during fall 1955 and spring of 1956 left us very few apple trees to go to the two year size for this year and therefore we are very limited on 2 year old apple trees at Bountiful Ridge 1956 and spring of 1957. BUT WE HAVE A GOOD SUPPLY OF APPLE TREES IN EXTRA FINE ONE YEAR OLD APPLE TREES FOR FALL 1956 and SPRING 1957. They are rated generally as the best type to plant. PLAN YOUR APPLE PLANTINGS THIS YEAR WITH BOUNTIFUL RIDGE GROWN SUPERIOR ONE YEAR OLD APPLE TREES. THEY WILL GIVE SATISFYING RESULTS.

1 Yr. old Apple Trees growing at Bountiful Ridge. These Gallia Beauty, many 6 ft. tall. The dream of good one year trees come true. Our 1 Yr. Apple Trees are extra fine this year.

MONROE (17b) A resulting cross between Jonathan and Rome Beauty was introduced by New York Experimental station in 1949. Tree resembles that of the Rome Beauty in appearance and growth while the fruits resemble the Jonathan and both appear to have no major faults, tree being vigorous, upright-spreading and annual bearer. Fruits large, roundish-conic, resembling a well colored Baldwin with brighter color as Jonathan. Apple flesh is light yellow, crisp, juicy, mildly sub-acid, quality good for dessert or processing. A winter apple ripening after Baldwin and before Rome. It can be recommended for planting throughout the Central and North Eastern fruit areas. Can supply in 1 yr. trees only, during spring 1957.

✓ **GALLIA BEAUTY (Red Rome) (18)**

It leads other Red Rome Beauty type apples. It can rightfully be called "One of America's Most Beautiful Apples." Demand the Gallia Beauty when planting the Red Rome type apple.

The Gallia Beauty originated in Ohio and is a typical Rome type tree, being thrifty, hardy and productive. The fruit of the Gallia Beauty carries a brilliant bright red, without stripe and seems to be of higher quality than the regular Rome Beauty and keeps exceptionally well in storage. The Gallia Beauty will size up equal to the regular Rome but many of the other inferior so-called Red Rome types will not size up satisfactorily and again we urge you to plant only the Genuine Gallia Beauty. We offer you the best and charge you no more.

✓ **APPLEGATE RED ROME (18a)**

A RED BUD SPORT OF THE ROME BEAUTY WE ARE PROUD TO PRESENT

The Applegate Red Rome comes from the orchards of Leslie Applegate, Fredhold, N. J., where we have observed its behavior for many years.

Size alone recommends this strain if nothing else were considered because of the unvarying uniformity of its fruits which will hardly ever run less than 3 inch minimum with 95% running to large grades, under conditions found in the Applegate Orchards.

Outside of size the color tones in the apple are an attractive red.

The tree is similar in growth and shape as regular Rome. One year trees only.

ROME BEAUTY (18b) Keeps in good condition till May and June. Large round, mottled and striped in handsome shades of red; flavor and quality way above the average; appearance and size are its valuable points; always sells and always brings good prices.

JERSEY RED (18c) Tested as N. J. No. 1. Widely tested in New Jersey. A cross of Gallia Beauty and White Winter Pearmain. Fruits are large round-oblite, colors a deep attractive red. Very firm and late keeping as is Rome. Holds to tree exceptionally well. The tree is very vigorous, with large heavy foliage resistant to blight and breakdown. Fruit seems a little better quality than most Rome types. 1 yr. old trees available.

✓ **RED ROME (No. 262 Type) (18d)**

This type Red Rome comes to us from the far West and has been planted widely in the Appalachian fruit area. Its merits over Gallia Beauty are questionable, but some growers like it better and we have the trees in fine 1 yr. stock.

CRANDALL (18e) Introduced fall 1951 by the Illinois Agricultural Experiment Station, resulting from a cross between Rome Beauty and Jonathan. Tree is moderately vigorous low-spreading of the Rome type, heavy annual bearer. Lateral branches form wide angles, strongly reinforced. Foliage is not susceptible to apple scab. The fruits are roundish oblate, symmetrical stem short and fairly thin. The skin tough, moderately thick, developing heavy wax when in storage. The flesh is yellowish-white, firm but fine-grained, crisp and juicy. The flavor is mild sub-acid, aromatic, very good to excellent quality as dessert and cooked. Does not spot as Jonathan. Should do well in areas where Rome, Jonathan and Winesap are commercial varieties. Hangs well to tree keeping until March in storage.

✓ **PARAGON (19)** One of the best of the long-keeping winter varieties. Does well on almost any soil; thrifty grower and fruits young; bears regularly; is of the Winesap type, good quality; coloring a deep dull red almost all over; flesh slightly yellow. Needs cross pollination.

✓ **Bountiful Strain Imp. Winesap (19a)**

Increases in popularity each year as more become acquainted with this wonderful apple. See full description on page 16.

This is a picture of some of our fine, heavy rooted, two year old apple trees. Note the strong growth which they are making here in our nursery. This photo was taken in mid-August with almost two months yet to grow. Trees of this type are typical of Bountiful Ridge grown stock. Please ask for our special quotations on large quantities of trees. **WE WANT YOU TO PLANT BOUNTIFUL RIDGE TREES.**

For greater orchard success plant our thrifty selected strains. They are superior.

Crab Apples

Combines fruit and bloom to give beautiful ornamentation the year around. May be used solely for ornamental planting with success.

Demand for crab apples on the fresh fruit market increases every year. Also used extensively for jellies, sauce, and pickling. Plan to include them in your planting this year. These are the most widely planted varieties available. Bountiful Ridge trees bring success.

Prices same as All Standard Apple Trees - See Page 17.

✓ **HYSLOP** Season September to October; tree vigorous very hardy. Fruit medium; yellow ground with heavy shadings of deep crimson and splashes of maroon with heavy blue bloom. Flesh fine, firm, yellow, astringent. Bears abundantly in clusters which makes tree exceedingly ornamental.

✓ **DOLGA** A handsome Red Crab Apple of medium size. The fruit jellies easily and makes rich, ruby red jelly. Tree hardy, vigorous, productive, medium size and especially adapted to ornamental planting.

TEXAS PLANTER PRAISES STOCK

Hitchcock, Texas, Jan. 20, 1956

I wanted you to know how pleased I was with the fine trees and shrubs you sent me on my first order from you and in what wonderful condition they arrived.

Very truly yours,

Mrs. Glen J. Weber

TREES PLANTED 1944 BEARING WELL

Roaring Springs, Pa., Feb. 27, 1956

Gentlemen:

Our planting of your trees in 1944 are fine and bearing well.

Ore Hill Orchards

**Bountiful

DWARF APPLE TREES

**LOWER PRODUCTION COSTS - SMALL TREES AT MATURITY
LARGE SIZE FRUIT - GOOD QUALITY - QUICK TO BEAR**

These phrases do really tell of the merits of Bountiful Grown DWARF APPLE TREES. All are important factors which must be taken into consideration by both the commercial and home fruit growers alike. All trees are high budded or grafted by our own process to insure your receiving a TRUE DWARF TREE.

We at Bountiful Ridge are now producing on DWARF ROOT STOCKS a complete variety list consisting of the most popular commercial along with the old standards used by the home fruit grower.

LET US SUPPLY YOUR PLANTING NEEDS THIS YEAR

Now Listing Varieties Grown On Four East Malling Selections In Order To Better Serve Our Customers

These offerings are based on the recommendations of eminent horticulturists and our own personal observations during the past several years.

Williams Early Red
Yellow Delicious
Yellow Transparent

E. M. IX — VERY DWARFING

This is the most dwarfing of all the apple stocks being propagated by nurserymen today. Trees start to bear in two to three years, producing large, highly colored apples. Ideal for small city gardens and now being utilized by the commercial orchardists quite extensively. Due to a very light root system, trees on this stock usually need staking for a few years.

Early Red Stayman

E. M. VII — SEMI-DWARFING

The ideal stock for small, semi-dwarf trees, cordons, and espaliers. Does particularly well on heavy clay soils. It has proven to be very hardy and has a good root system which makes a well anchored medium for small trees. Seems to grow vigorously in its early years but soon settles down to slower growth and heavy cropping. Generally recognized to be one of the best understocks for commercial planting as well as the home fruit grower.

Yellow Delicious

E. M. II — SEMI-VIGOROUS

A good, medium-vigorous stock with a good root system. Though this stock makes a larger tree than E. M. IX or VII, it does have the early bearing characteristic of them. Trees behave well on most soils and are now being used quite extensively in commercial planting. The stock has been found resistant to crown rot.

DWARF PEAR TREES

Easy to Grow - Early to Bear - Take Limited Space

NO LONGER DO YOU HAVE TO BUY YOUR PEARS FROM THE SUPERMARKET

**PLANT THESE ECONOMICAL, EASY TO CARE FOR, TROUBLE-FREE,
DWARF TREES AND BECOME YOUR OWN FRUIT PROVIDER**

Bountiful Ridge DWARF PEARS come into bearing the second or third year and make a very profitable, satisfying venture for the home owner and the commercial grower.

DWARF PEAR trees are low-headed — reach a maximum height of 7 to 9 ft. May be planted as close as 10 to 12 ft. apart. Insects and disease are no longer a problem since small size makes spraying a simplified job.

Plant Bountiful Ridge Dwarf Pear trees with confidence. All are grown on compatible QUINCE ROOT-STOCK for complete customer satisfaction.

VARIETIES OF DWARF PEAR

Devoe	Buerre D'Anjou
Bartlett	Duchess
Kieffer	Flemish Beauty
Clapps Favorite	Seckel

Please consult the Standard Pear Section for full description of these varieties.

Prices for Dwarf Pear Trees

2 yr. branched, 3 ft. up, \$2.50 each; 3 for \$6.00
2 yr. branched, 2 ft. up, \$2.00 each; 3 for \$4.50

NOTE—As with the standard pear varieties, many dwarf varieties are also self-unfruitful and should therefore be interplanted with other varieties to produce consistent crops. Seckel and Bartlett will not cross-pollinate each other and where these two varieties are planted another variety should be added. Duchess and Flemish Beauty are the most self-fruitful of those we list and are good pollinating varieties.

Pictured above 3 yr. old daughter of Mrs. E. E. Huene of Baltimore, Md., standing beside a two year old dwarf Bartlett tree. Plant this year — they satisfy.

APPLE SEEDLINGS

**SAVE THOSE VALUABLE DAMAGED PRODUCING TREES BY BRIDGE GRAFTING AND LOW INARCH
WORK WITH RELIABLE, DISEASE - FREE, LOW COST FRENCH CRAB SEEDLINGS**

Excellent for budding or grafting any of your special varieties which you cannot buy from your nurseryman

These are merely common apple seedlings that have been used in the propagation of apple trees for generations, and have proven congenial to our entire apple variety listings. The seedlings generally succeeds as a rootstock wherever they are planted and apple trees are successfully grown, with uniform results.

Field of apple seedlings growing in our nursery August, 1956. They are truly beautiful and will bring satisfaction every time.

The seedlings herein offered are grown in the nursery row and have a two year root with a one year top. There is an off-set present but is not harmful nor injurious to the stock. All are exceptionally vigorous and thrifty plants which will bring results to the planter. Supply limited.

RA-PID-GRO

THE NEW EASY TO USE ALL AROUND LIQUID FERTILIZER

Spray it on Your Trees—Plants—Vegetables—Use as a Dip to Roots When Planting—Add to Spray Solutions or When Applying Water. Good For Anything That Grows.

RA-PID-GRO is an approved formula containing Nitrogen 23% — Phosphoric Acid 21% — Potash 17% in combination with Vitamins B1 and B2 along with other elements necessary for normal plant growth.

RA-PID-GRO is shipped in dry form and water is added by the user to make one of the finest plant foods which can be purchased. One pound of RA-PID-GRO makes 22 gallons of the quickest acting fertilizer ever used for dipping stock when planting and putting around all plant growth. Makes 44 gallons of liquid for spraying on foliage. It will not burn when applied as a spray. It is 100% effective as it contains no inert material. Our recent shipment of several tons to South America proves the universal acceptance and value of this fine product.

Write us for the latest literature giving the full story on how to use this "MIRACLE MATERIAL" for "Healthier, Hardier Plants, Earlier Maturity of Crop."

Follow full directions included with every shipment for best results.

RA-PID-GRO PRICES

One pound package	\$ 1.25
Two pounds	2.35
Five pounds	4.50
Ten pounds	8.75
Twenty-five pounds	21.00

All prices are for postpaid shipment.

Our sales increase each year as RA-PID-GRO proves its worth to those who use it.

Apply Plant Food the New Way

No fuss — no muss. Simply mix with water & spray Trees, Shrubs, Evergreens, Berry Plants, Vegetables and plants of all kinds. Starts to work at once. A trial will convince you.

At last — the home fruit growers' blessing.

YOUR SPRAY PROBLEM HAS BEEN SOLVED. NOW A COMPLETE SPRAY IN ONE PACKAGE FOR ALL TYPES OF FRUITS. SOMETHING NEVER BEFORE AVAILABLE TO THE SMALL GROWER.

Full protection for your trees and fruit against insect pests and diseases. Easy to use as a dust or liquid spray.

A must for every fruit grower to obtain perfect fruits.

PRATT'S FRUIT TREE SPRAY

Contains Sulphur — D.D.T. — Basic Lead Arsenate in proportions to protect fruit and foliage.

Complete directions to use the "Bountiful Ridge Way" enclosed with every package.

Order your supply at once and be ready to use at necessary or proper time.

One lb. can, prepaid delivery	\$.95
Three lb. bags, prepaid delivery	1.85

Special quotation on larger quantities. Write us covering your needs.

ATLAS FERTILIZER EMULSION

A complete plant food which has been fully tested in our nursery for the past several years and we highly recommend it for all types of plants, fruit trees, flowers, vegetables and lawns.

Use both as a foliage or root food with complete confidence. Will not burn to cause serious injury to growing or dormant nursery stock.

ATLAS FERTILIZER is economical to use — one pint makes 32 to 96 gallons of finished plant food — and supplies most of the known ingredients for a completely balanced plant food. May also be used in combination with the other spray and plant food listed on this page.

Join the thousands of experts and home gardeners who now use ATLAS EMULSION and include it in your fertilizer program this year.

Write for full particulars.

Available in the following sizes:

1 ounce bottle	\$.35 each, plus 10c postage
Pint cans	1.00 each, plus 15c postage
Quart cans	1.90 each, plus 25c postage
Gallon cans	6.25 each, plus 45c postage

North Carolina Customer Praises Stock and Service

I received my New Red Leaf Barberry yesterday and must say that it came through in first class condition. Your packing of plants is fine and I thank you for your fast service.

Yours very truly,
John H. Harrison

The New DEVOE PEAR

(PLANT PAT. 728)

Rich Appearance, Large Size, Early Bearing Habits. Long Keeper. Fine Quality, Disease Resistant and Heavy Cropper.

New York growers realized as much as one dollar per dozen for Devoe fruits. You cannot afford to be without such a profit maker. Make Devoe your first choice this year.

It is rare to find a new fruit which has created the interest and enthusiasm accorded the announcement of the new Devoe Pear.

The Devoe Pear was found some 25 years ago on the farm of Mr. Charles Greiner, Marlboro, N. Y., as a chance seedling. Being attracted to the healthy appearance of the foliage and sturdy wood of the little tree he waited and watched for it to come into fruiting age. Much to his delight it bore at the age of 3 years, producing a fine large type fruit, shaped much like Buerre Bosc, having a fine smooth skin which as the fruit ripened, turned from green to light yellow, with an attractive red cheek. It was found to have superb quality and a delightful pear taste, the flesh is white, firm and lacks grit cells. It is very juicy and sweet. Tests covering several years proved it to be a long keeper and may be kept in cold storage until February if desired. Its season is late September. Very resistant to pear Psylla.

The tree is a rapid grower, upright in habit, wood is whippy and bears fruit load without breakage. So far it has not shown itself subject to blight even under southern conditions. We recommend the Devoe Pear for trial in all pear growing sections. Devoe has passed the experimental period. ITS A REALITY. PLANT DEVOE PEAR FOR GREATER PROFITS.

Prices are per tree:	1-9	10-49	50-99	100 or more
2 yr. or 1 yr., 5-6'	\$2.50	\$2.00	\$1.35	\$1.20
2 yr. or 1 yr., 4-5'	2.15	1.90	1.20	1.05
2 yr. or 1 yr., 3-4'	1.90	1.60	1.10	.90
1 yr., 2-3'	1.65	1.45	.95	.80

Dwarf Devoe Pear, 1 to 2 yr., 3 ft. up, \$2.50 each.

Mr. Charles Greiner, Marlboro, N. Y., photographed, September 1947, standing beside a 4 year old topworked Devoe Pear Tree.

As Devoe begins to bear in widely distributed areas it shows its real value and promises to become a leader of commercial pears. Each succeeding year justifies our confidence in this pear. See cover page for color illustration.

Note size of Devoe Pear compared with the ruler. Again observe the fine smooth finish and the lack of seed cells in the open half.

Beauty of color, large size and long keeping ability along with a fine tree combine to make Devoe a winner. A Bountiful Ridge Exclusive — Introduced and sold only by the Bountiful Ridge Nurseries in the eastern United States.

ONE YEAR TREES SOLD BY HEIGHT ONLY

Bountiful Ridge pear trees do satisfy. If you are interested in quantities larger than those listed, please write for our best prices. We want you to plant vigorous, hardy, Bountiful Ridge grown trees.

NOTE—Most Pear varieties are self-unfruitful and should therefore be interplanted with other varieties to produce consistent crops. It should be noted however that Seckel and Bartlett will not cross pollinate each other and where these two varieties are being planted another variety should be added. Duchess and Flemish Beauty are the most self-fruitful of those we list and are therefore good pollinating varieties. We shall be glad to give detailed information upon request.

Photograph showing method of grafting on Old Home trees. Notice the distance from trunk and the well formed scaffold produced by the scion. Varieties grafted on blight resistant stock will revive the Pear industry in sections now unable to grow pears on account of fire blight.

OLD HOME BLIGHT RESISTANT PEAR

Old Home has proved highly resistant to all forms and is recommended as an intermediate or understock for pear varieties subject to Blight. Those engaged in breeding work covering many years have proved the merits of Old Home to blight resistance. Old Home is the only pear understock which is resistant to blight under any and all conditions. Plant Old Home trees in your orchard and graft to varieties wanted.

Old Home Blight Resistant Pear Trees are listed under the same sizes and prices as other pear trees.

We do not have any grafted trees in our nursery.

WAITE PEAR The fruit resembles that of Bartlett and is about same size, ripening after Bartlett and just before Keiffer. The flesh is smooth in texture and almost free of grit cells. It is more acid than Bartlett but is excellent for cooking and canning and fairly good for dessert purposes. The tree is rather slender, willow-like grower and of moderate vigor.

SECKEL Small, rich, yellowish-brown; one of the best flavored pears known; very productive. September and October. Blight resistant and a general favorite in every home planting.

SHELDON The tree is large, vigorous, upright spreading, hardy and productive. The fruit while not large is sufficient in size to meet the demand for a good dessert fruit and no rival in season surpasses the Sheldon for appearance or quality. The flesh is melting and juicy, sweet, vinous and highly perfumed. October.

CLAPP'S FAVORITE A large, fine pear, resembling the Bartlett; pale lemon-yellow with brown dots and a fine texture; melting, buttery, juicy, with a delicate flavor; tree hardy and productive. August and September.

KEIFFER Grown in all sections of the U. S. and Canada. The tree is practically immune to blight, very thrifty and bears constant, heavy crops. The fruit is large to very large, golden yellow often blushed, juicy and one of the best Pears we have for shipping to distant and foreign markets.

EWART PEAR One of the better fall pears found in the orchards of Mortimer Ewart, East Akron, Ohio. The tree is a willow grower but quite resistant to blight, bears young and annually. The fruit is remarkable for its large size and quality. It is greenish yellow, netted with russet, and has a fine melting, tender, juicy flesh. It ripens a month later than Bartlett.

MANNING ELIZABETH Among the best of our summer pears for home use or markets. The fruits are of handsome appearance and distinctive flavor. The tree is hardy, vigorous, productive, resistant to blight and bears early and annually.

BARTLETT

ONE OF OUR GREATEST COMMERCIAL PEARS

Large size, golden yellow when ripe with a beautiful blush next to the sun. Buttery, very juicy, highly flavored; tree a strong grower, bears early and abundantly. August and September. See inside front cover page for color illustration.

ANJOU (Buerre d'Anjou) A large, fine pear buttery and melting, with sprightly flavor; tree a fine grower and very productive. One of the best. October to January. (Blight resistant).

DUCHESSE D'ANGOULEME Very large, greenish-yellow, sometimes russeted; makes a beautiful tree. A heavy bearer, buttery, melting and sweet. October and November.

FLEMISH BEAUTY Large, juicy, melting and good bearer; very hardy but prefers sunny location. September and October.

WORDEN-SECKEL This beautiful and delicious pear is rated very high. Size larger than Seckel. It is shaped like Bartlett, but is not as large. October.

DOUGLAS Hardy, blight resistant and productive. Often bears heavy at 3 years of age. Fruit is large, handsomely covered with red blush, and smooth finish.

BUERRE BOSC Greatly esteemed. A large yellow pear; flesh white, rich and delicious; has long stem which allows it to sway in heavy winds without dropping. Tree slow grower, but most productive; keeps until Christmas. 1 year trees only.

ORIENT PEAR (Blight Resistant)

A new introduction from Tennessee Experiment Station which has proved to be blight and leaf spot resistant at Knoxville orchards.

The trees are large, vigorous, which grow with open centers and require little pruning to produce good yields. Blooms several days later than Keiffer. Fruit ripens in mid-August at Knoxville and averages large. Skin thick, tough and rather rough. Flesh is creamy white with good texture, mild in flavor. The fruit keeps well in storage. Recommended for trial planting in all areas where fire blight is prevalent.

TREES IN EXCELLENT SHAPE

Akron, Ohio, November 18, 1955
Received your fruit trees today. They were in excellent shape. I am more than delighted with them. Thank you kindly, gentlemen.

John Pleskach

See special feature on Dwarf Pear on page 23. Also read about the sensational Devoe on preceding page. It is a proven money maker.

PLUM TREES

OUR PLUM VARIETY LISTINGS HAVE BEEN CAREFULLY SELECTED
TO SUPPLY A VARIETY FOR EVERY SECTION AND PURPOSE

Include Bountiful Ridge Plums In This Year's Plantings For Added Profit And Satisfaction

Prices for all plum varieties:

Prices Per Tree	1-9	10-49	50-99	100 or more

1 yr., 2-3'	1.60	1.40	.95	.80

Send us your definite list for quotation, when large lots are desired.

THE EUROPEAN PLUMS

GENERALLY SELF-FRUITFUL

Varieties listed in order of ripening.

BONNIE An open pollinated seedling of America. Compared to America the fruit is similar except the Bonnie is larger with more red color and ripens earlier. The flesh is yellow, juicy and much like America in flavor. Ripens in early July and is a firm shipping plum. Tree is very hardy, a vigorous grower and produces well. Sorry, not available until Fall 1957.

BRADSHAW Due to very large size, fine dark violet-red color, good shipping and keeping ability, the Bradshaw has continued to grow in popularity. The flesh is yellowish-green, juicy and pleasing to the taste. The tree is very vigorous, erect and productive.

STANLEY PRUNE

PROVING TO BE THE BEST OF ALL BLUE PRUNE TREES

Grows Well Anywhere — Produces Annual Crops — Bears Early — Tree is Healthy and Vigorous

The fruit is of the prune type. Excellent for cooking or eating out of hand. The tree is healthy, vigorous and fruit large in size. Dark blue with heavy bloom; flesh greenish-yellow; juicy, fine-grained, tender, firm, sweet, pleasant, quality good to very good. Freestone. Mid-season.

FELLEMBURG OR ITALIAN PRUNE

It succeeds under most all climatic and soil conditions. The fruit is dark purple with a dark blue bloom, medium to large size, oval. The flesh is juicy and delicious and it is very fine for drying and canning.

YAKIMA A very promising new variety. The fruit is large to very large being similar to Bradshaw in bright red color with a fine over all bloom and has a decidedly tough skin. Quality is excellent, flavor being spicy, aromatic and agreeable. Freestone. The tree is very vigorous, withstands cold well. Needs cross-pollination. Sorry, not available until Fall 1957.

BLUE REX DAMSON Originated in eastern Indiana, and is said to be the finest of all Damsons yet introduced. The tree seems to be hardy, is fast growing and productive. The fruit is about the same size as Shropshire but ripens ten days earlier, is high in quality and of better appearance than the old type Damsons. We recommend Blue Rex Damson for both home and commercial plantings. Sorry, not available until Fall 1957.

SHROPSHIRE DAMSON Fruit oval; tree a good grower and enormously productive; fruit of medium size, produced in thick clusters or groups, dark purple color, esteemed for preserving.

THE ORIENTAL PLUMS

Oriental plum varieties are self-unfruitful. Two or more varieties should be planted for satisfactory results.

BRUCE PLUM

Considered one of the best of the Oriental type plums. It ripens early (just after Mayflower peach), averages good size, very firm and fine quality for an early plum. If picked just as yellow background appears it will ship well and color a beautiful bright red with slight bloom over it in 3 or 4 days. Very productive but requires interplanting for pollination, using some other Oriental type plum.

RED JUNE Mottled garnet-red color overlaid with delicate bloom; firm, light yellow flesh, aromatic and sweet. The trees are large, vigorous, hardy and productive. Blooms late and fruit is very resistant to Brown Rot and Curculio. Usually ripens a week before Abundance. One of the very good Oriental Plums.

METHLEY

A FINE VARIETY FOR ANY PURPOSE

A recent introduction which is rapidly gaining popularity, due to its fine quality and handsome appearance. The fruit is medium to large in size, reddish purple in color with red flesh. It is juicy, sweet and of distinctive flavor. The tree is vigorous and upright in growth habit. Does well on most types of soil and is a heavy annual bearer.

ABUNDANCE One of the best Oriental Plums. Tree is a very rapid grower, healthy and comes into bearing quite young and yields abundantly: medium size, rich, bright cherry red with distinct bloom and highly perfumed, flesh light yellow, juicy and tender, and excellent quality. Tree vigorous and hardy.

SANTA ROSA

A NEWCOMER THAT SURPASSES BURBANK
LARGE — ATTRACTIVE — A SALES MAKER

One of the new and noteworthy Oriental plums. Surpasses Abundance and Burbank in many tree and fruit characteristics. Fruits are large and attractive. Tree is prolific bearer.

BURBANK Medium to large, orange-yellow, dotted and marbled with red, flesh meaty yellow, sweet and good; valuable for canning and a good market plum. Hardy and very prolific.

SATSUMA PLUM A Luther Burbank creation which enjoys a continued popularity. The fruit is medium to large, color reddish purple with pink bloom. Flesh dark, purplish red, juicy, sweet with an alluring aroma and distinctive taste. It is semi-freestone and recommended for those who want the best.

YELLOW EGG

SIZE — BEAUTY — QUALITY

Tree is vigorous, roundtop, hardy and very productive. Fruit ripens late, large size, golden yellow with heavy bloom. Skin is thick, flesh golden, juicy, mild and fine in quality. Semi-free to freestone when fully ripe. Excellent for cooking and eating out of hand.

WICKSON Largest of all Oriental Plums. Trees upright in growth, bearing good crops under proper conditions. Fruit large, dark red over a yellow ground, splashed and mottled with darker-red. Flesh amber yellow, juicy, firm, pleasant and sweet in flavor.

NOTE—Most American and European Plums seem to be self-fertile and produce fruit on their own pollen, but produce better when interplanted with other varieties. Oriental varieties have been found to be self-unfruitful and should always be interplanted at all times. Abundance is considered one of the best general pollinators.

SWEET CHERRY TREES

NOTE—Sweet Cherries bear heavier and more regular where properly cross pollinated and two or more varieties should be planted together.

Again note that Napoleon, Bing, Lambert and Emperor Francis are incompatible and a third variety should be planted with them.

Sour Cherries are generally self fruitful and will cross pollinate Sweet Cherries to a greater or lesser degree, depending on seasonal bloom period variations.

SWEET CHERRIES (All Varieties)

Prices given are per tree.

	1-9	10-49	50 or more
2 year, 5-6', 11/16 up	\$2.75	\$2.20	\$1.75
2 year, 4-5', 9-11/16	2.40	2.05	1.50
2 year, 3-4', 7-9/16	1.95	1.75	1.25
1 year, 4-5'	2.10	1.90	1.40
1 year, 3-4'	1.75	1.60	1.15

NOTE: One year old sweet cherry are generally preferred for large orchard plantings. We have some of the finest one year old sweet cherry. See photographs.

Write for special prices if you are interested in large quantities. We will give you the advantage of any market changes if you do this.

SENECA Ripens two weeks before Black Tartarian. The cherries resemble those of Black Tartarian—large, round-cordate, purplish black with juicy melting flesh and a rich sweet flavor; the pit is free and the skin does not crack. The tree is vigorous, productive, and has upright, spreading habit of growth. Introduced by N. Y. Agricultural Experiment Station. Early.

EARLY RIVERS This fine cherry highly regarded by cherry growers in Eastern New York. Ripens a few days later than Seneca and 10 days ahead of Black Tartarian. It is larger and firmer in flesh than Tartarian. Crimson black in color and excellent quality for dessert. Early. Cannot supply until Fall 1957.

SCHRECKEN Resembles Early Rivers. Large, heart-shaped, glossy black cherry, handsome in appearance, ripens just after Early Rivers. The flesh is firm, melting, moderately sweet, aromatic. The tree is vigorous. Cannot supply until Fall 1957.

HEDELFINGEN Ripens just ahead of Windsor and Lambert. Its performance in New York, Canada and Europe justifies its being recommended as a large, firm-fleshed, high-quality, late black cherry of the Lambert type. The fruit has the valuable attribute of being more resistant to cracking than most cherries.

BING This valuable black cherry succeeds everywhere. Flesh very solid, flavor of the highest quality, a fine shipping and market variety. Midseason.

BLACK TARTARIAN Very large; bright purplish black; tender; juicy, very rich. Tree a remarkably vigorous and erect grower, and is an immense bearer. One of the most popular varieties in all parts of the country. Early.

GOVERNOR WOOD Large, heart-shaped, light yellow, mottled light red; juicy, sweet and rich. Tree vigorous, productive; forms a round head. An old variety still a favorite in many regions.

NAPOLEON BIGGAREAU (Royal Ann). A beautiful cherry of large size; pale yellow with bright red cheeks; flesh firm, juicy and sweet, one of the best for market. Midseason.

LAMBERT One of the largest of all cherries. It is purple-red, firm and rich. Every year sees an enormous crop, and the tree not only grows well, but is very resistant against insect and fungus attacks. Midseason.

GIANT Introduced from Europe. Of the many sweet cherries tested at the N. Y. Station grown in the past 20 years, it is one of the best for an extra early black market cherry. Ripens a week before Black Tartarian.

A sectional view of our 1 year Sweet Cherry block growing during mid-summer showing vigorous, heavily bodied trees, many of them over 6 feet high. Stock like this is always dependable.

EMPEROR FRANCIS Large, high quality cherry of the Napoleon type. Ripens just before Napoleon and is less subject to cracking. Promises to be one of the best main-crop sweet cherries of the Napoleon type. Midseason.

WINDSOR Tree upright, vigorous and a rapid grower; fruit large, roundish, oblong, very firm and juicy; flesh pinkish and sometimes streaked; quality very good; a productive bearer; has attracted attention owing to its large size and dark color; almost black. A leading commercial variety, used widely for pollination purposes. Midseason.

SCHMIDT'S BIGGAREAU This fruit is of very large size, with a fine rich flavor. Fruit grows in clusters. Is an excellent shipper. Tree is vigorous and one of the hardiest of all sweet cherries. Midseason.

VERNON The fruit is large, firm-fleshed, black and ripens just before Bing. The tree is vigorous and productive. The variety has proven to be promising in New York. 1 yr. trees only. Cannot supply until Fall 1957.

BLACK RUSSIAN

One of Our Finest New Hardy Sweet Cherries

A new sweet cherry which came to us from the orchards of Mr. Hiram Burkholder, Clyde, Ohio. Mr. Burkholder for years tested many varieties of new fruits to determine the finer varieties for the fruit grower and the Black Russian Cherry is an outstanding example. In tree habit it is a vigorous grower, very hardy and highly productive. The tree under his conditions has shown no injury at temperatures of 15 to 20 degrees below zero, nor has late spring frosts during bloom period affected the crop materially. The fruit is medium in size, and does not crack or show tendency to brown rot before picking. The fruit is very dark in color being almost black. Flesh leaves pit readily. The flavor is distinctive, aromatic and delightful. We recommend this new cherry. Ripens just before Schmidts. Cannot supply until Fall 1957.

OUR IMPROVED MONTMORENCY CHERRY TREES SOUR CHERRY

We are very proud of our sour cherry trees; we have seen nothing finer anywhere. You can't go wrong when planting our sour cherry.

BOUNTIFUL STRAIN IMPROVED MONTMORENCY

(DAYTON STRAIN)

The finest type we have found.

Large Size — Vigor of Growth — Productivity — Plus
Virus-Free Planting Stock Make It Superior To All
Other Types Montmorency

Don't Gamble With Your Future Orchard. Plant
Bountiful Strain This Year For Greater
Cherry Profits.

It was discovered in the orchards of Clyde S. Mumma, Dayton, Ohio, in a general planting of Montmorency trees and when we first saw the tree it was about 10 years of age and loaded down with fruit, having a heavier crop than any other trees adjoining it. All trees had the same attention and Mr. Mumma says it had always borne this large type of Montmorency. The tree is vigorous but not any larger than other trees. The fruits have the same rich red color as other Montmorency cherries but seems to be slightly more mild in flavor. Its immense size immediately attracted our attention. We grow several hundred trees of this type for Mr. Mumma's own planting and after further observation now pass it on to our customers at no additional cost to them. Nature again contributes an IMPROVED TYPE TO ONE OF OUR GREATEST SOUR CHERRIES. Each year brings added praise for this Improved Strain Montmorency.

Quince Trees

Quince prices all varieties:

4-5 ft., 9/16 up	\$2.25 each
3-4 ft., 7-9/16	1.95 each

ORANGE Roundish bright golden yellow, very large, fine grained, fine quality. Best for cooking. Firm, will stand shipping.

CHAMPION Fruit very large, fair and handsome. Bears abundantly while young; flesh cooks as tender as an apple without hard spots and cores; flavor delicate quince taste.

NOTE: The original tree and 2nd generation orchards which were bud wood sources for our Improved Montmorency have been examined during growing season and are pronounced free of Cherry Yellows Virus. This also applies to our growing Nursery Stock.

ENGLISH MORELLO Easily grown, generally producing a heavy crop. Fruit dark red, quality good; rich, acid flavor; late. Hardy for extremely cold latitudes.

EARLY RICHMOND One of the most valuable passed for cooking purposes. It is the good old variety that yields such marvelous crops in the gardens. The most hardy of all varieties, uninjured by the coldest winters.

BRASSINGTON A superior new sour cherry fast gaining in popularity. Its large size, distinctive flavor and bearing ability recommend it for trial. Include some in your next planting. Tree upright, dense, very productive. Fruit averages 1/2 to 3/4 in. in diameter, attractive, round, light red color, juicy, sub-acid, pleasant flavor; a fruit reddish tinge permeates the yellow flesh. Fruit characteristics are intermediate between sweet and sour cherries.

SELECTED IMPROVED HANSEN'S

BUSH CHERRY

A SELECTED TYPE OF HANSEN'S IMPROVED
BUSH CHERRY, COMBINING DESIRABLE
FRUITS WITH A DWARF
ORNAMENTAL SHRUB.

This selected variation of the famous Hansen bush cherry has fruits resembling the Montmorency cherry only not as large. The fruits are edible and make fine pies. A TRUE DWARF PLANT SELDOM ATTAINING A HEIGHT OF MORE THAN 3 FT. Blooms early spring, giving beauty as a shrub plant. Branches are almost covered with attractive red cherries of good size.

HARDY — EASY TO GROW

18 to 24 inch branched, bearing size plants, \$.90 each;
3 for \$2.50; 10 for \$7.00.

NUT TREES

Combine Profits, Pleasure and Beautiful Ornamental Shade by Planting Bountiful Ridge Grafted Pecans, Walnuts and Filberts

HARDY NORTHERN GRAFTED PECANS

✓ **MAJOR** This is perhaps one of the best of the northern pecans, for growth, disease resistant and regular bearing. Very high quality nut, thin shell, small, plump, sweet. A splendid tree, starts bearing the 3rd or 4th year after transplanting.

✓ **GILES** This pecan is somewhat larger than the Major and bears very heavy crops, usually starts bearing the 3rd or 4th year after transplanting. Tree more spreading than the Major, is disease resistant, very fine flavored nuts.

2 to 3 feet, \$3.95 each; 3 to 4 feet, \$4.65 each

GRAFTED PAPER SHELL PECANS (Southern Types)

All our Pecan trees are grafted so as to give uniform type Pecans and bring them into bearing very young. We do not recommend seedling pecan trees at any price.

✓ **STUART PECAN** Extremely hardy and a strong grower. Nuts of good size and well filled. Shell very thin and easily opened.

✓ **SCHLEY PECAN** The Schley is thrifty, strong grower; nuts long, well filled, with a very thin paper-like shell.

✓ **FARLEY** We list this recent selection of pecan for the first time with the assurance that it is self-pollinating and more hardy than most varieties, and seems to adapt itself to varied soil and climatic conditions from the far South to the Central Northern area.

✓ **DESIRABLE** The Desirable is another recent selection which has been much recommended as a very productive and comparatively hardy self-pollinating variety suitable for home and commercial planting. We feel that the Farley and Desirable both are very desirable additions to the older established varieties of thin shelled pecans.

SOUTHERN TYPE GRAFTED PECAN TREE PRICES:

3 to 4 feet, \$3.00; 3 for \$8.50; 10 for \$27.00; 20 for \$50.00

ENGLISH WALNUTS

VERY HARDY TYPES — LARGE, THIN SHELL

English Walnut production is proving practical and desirable in the East Central areas. Plant Bountiful Ridge, Early Bearing, Grafted Trees.

Tree valuable for its fruit and shade. The nuts are thin shelled with fully meat kernels of delicious flavor. Tree is hardy and productive.

2 to 3 feet, \$2.95 each; 3 for \$8.50; — 3 to 4 feet, \$3.95 each; 3 for \$11.50

HEARTNUT—(Varietal form of the Japan Walnut)

Our selection is a seedling of the well known Canoka, which is one of the most rapid growers of all nut trees, bears young, often the third year. Bears annual crops, cracks easily, the kernels coming out mostly in whole halves.

2 to 3 feet, \$2.50 each; 3 to 4 feet, \$3.50 each

✓ **JAPAN WALNUT** Valuable as a shade tree. Nut has comparative thin shell, kernel flavor similar to white walnut. Used largely as a pollinizer for English Walnuts. 2 to 3 ft., \$1.25 each; 3 to 4 ft., \$1.50 each. Our Japan walnut is a very selected type.

HICAN-TREES (Pecan x Shellbark Hickory Hybrids)

✓ **CLARKSVILLE** Trees grow with great vigor, symmetry and beauty. Foliage is dark green, makes a beautiful ornamental tree as well as producing large high quality nuts which are thin shelled and fine flavored. Trees are hardy in Northern areas.

✓ **GERARDI** Tree grows very much like the Clarksville and is hardy in Northern areas. Nuts are often 2 inches long and about 3/4 of an inch in diameter and very fine flavored with good cracking qualities.

Grafted Hican Trees, 3 to 4 feet, \$4.65 each

✓ **THOMAS BLACK WALNUT (Grafted)** One of the largest and finest Black Walnuts yet found. Kernels large, light-colored; nearly all crack out in whole halves. Tree extremely vigorous and hardy. Supply limited this year. 2 to 3 feet, \$2.95 each; 3 for \$8.50; 3 to 4 feet, \$3.65 each; 3 for \$9.95

Black Walnut Transplanted Seedlings

The regular Black Walnut you see growing freely in many sections. These are grown from seed and type nut varies considerably.

2 to 3 feet, \$1.70 each; 3 for \$4.50

3 to 4 feet, \$1.95 each; 3 for \$5.25

✓ **AMERICAN FILBERT (Hazel Nut)** The family favorite, attractive bush, yielding abundant crops. Bears young. Does not grow a large tree. 2 to 3 foot plants, heavy, \$1.00 each; 10 for \$5.50.

✓ **BARCELONA FILBERT** Possibly the most widely planted type for commercial plantings in the Northwest. Larger than the native filbert, heavy and consistent bearer. 2 to 3 foot, \$1.90 each; 3 for \$5.10.

✓ **DuCHILLY FILBERT** Widely used to pollinate other types. Nuts are large and attractive. 2 to 3 ft., \$1.90 each; 3 for \$5.10.

America's Finest

Chinese CHESTNUTS

**Plant Them For Production Of Luscious Nuts.
Ornamental Shade Or Commercial Orchard.
Early Bearing, Fast Growing, Blight Resistant Trees.**

We highly recommend planting Chinese Chestnuts on hill sides or on land not adapted to general farming where soil is sufficiently fertile to support the trees. They not only produce a beautiful orchard but bring added revenue from the sale of nuts. Many growers now have orchards in production and report ready sale on nuts at 50c to 90c per pound.

Write us about location and we will be glad to advise regarding a commercial planting.

We are offering here the finest types, hardy, blight resistant and high quality chestnuts our Government representatives could find in the great Chestnut producing areas of China.

Growing Chestnuts For Profit

A fine example of Chestnut culture. This grove belonging to Mr. William J. Wilson of Fort Valley, Ga. is eight years old and consistently producing fine crops. This further shows the wide adaptability of the better strains of the Chinese Chestnut which are being grown here at Bountiful Ridge. Plant this year on spare land, in pastures, on wood lots, in yards for shade, beauty, and profit.

5 yr. old Chinese Chestnut trees loaded with nuts on the lawn of Ralph Gardner, Colonial Park, Pa. They make ideal lawn trees when trained to single high trunk type tree.

SELECTED STRAINS YOU CAN TRUST. ALL TYPES HAVE BEEN FULLY TESTED.

ALL ARE BLIGHT RESISTANT

Because of the uncertainty of grafted trees, incompatibility of union, over or under growth at point of grafting, etc., we have more and more been relying on seedling selections of the better types such as Nanking, Meiling, Kuling, J.A.K. and other selected seedling, made from seedlings of the above types. There is now a minimum of variation in our selections and our whole production of Chestnut trees is now derived from seed selections as explained above. We believe they are the best. We are sure you will like them.

**It Pays To Plant Bountiful Ridge
Grown Blight Resistant Chestnut
Trees.**

APRICOTS

Can Be Grown Wherever Peaches Do Well.

MOHR'S APRICOT Apparently a new apricot coming to us from Mr. Frank Mohr near Fogelsville, Penna. It is extremely hardy, bearing often when peaches fail; very productive. Fruit is large and a freestone. Flesh firm, solid and excellent quality. Colors a deep golden yellow, ripens early in season, being ripe at Fogelsville early in July. Our supply of Mohr's is limited.

STELLA A hardy Russian type apricot that is very cold resistant. Produces good crops of fruit where other varieties freeze out. The fruit is medium size, golden yellow color and delicious in quality. A freestone. Recommended for all sections where peaches can be grown.

MOORPARK One of the largest; orange yellow with numerous specks and dots; flesh yellow, sweet juicy and rich. August.

EARLY GOLDEN A good variety; very large, deep golden yellow, and fine in quality.

SUPERB Rated by many as the best. The tree is large, very thrifty and hardy and is extremely productive. Very good quality. Fruit is beautiful yellow with slight blush; flesh firm and solid.

CELESTE FIGS

FIG TREES

Our Heavy Rooted — Well Grown Plants Insure Early Bearing.

A Health Giving, Delicious Fruit For Every Garden

CELESTE Most widely planted of all figs in the southeastern fig areas. It is hardy and can be grown where less hardy varieties fail. Fruit is medium in size, skin violet, flesh white to rose color, firm, juicy, sweet and of excellent quality.

MAGNOLIA FIG One of the hardest species, doing well where the winters are not too severe. Fruit very large and of rich straw color. Fruit begins to ripen the last of June.

BROWN TURKEY Very hardy, dwarfish and prolific. Fruit medium size to large, pear shaped, skin copper brown, flesh white shading to pink, quality good.

EARLY VIOLET One of our hardest figs. Fruit small, round, skin shade violet purple at maturity. Ideal for preserving. Ripens continuously on new wood from July through September.

GREEN ISCHIA Strong growers yet hardy and one of the best flavored of the cold, hardy type of figs. Medium size, light green skin, crimson color. Excellent for eating raw or preserving. Ripens from mid-summer to frost.

Prices On All Fig Varieties:

18 to 24 inch ...	\$1.85 ea.	lots of 3, \$1.75 ea.
2 to 3 foot	2.15 ea.	lots of 3, 1.95 ea.

NECTARINES

A smooth-skinned Plum-Peach. Tree grows like peach. The Flavor, both Peach and Plum.

CAVALIER

RED CHIEF

THE NEW RED CHIEF and CAVALIER NECTARINES

They are among the best of the recently introduced varieties.

REDCHIEF A recent introduction by the Virginia Experiment Station which from observation and reports gives promise of being one of the best of our white fleshed Nectarines. Fruits are good size, highly colored and freestone, with very pleasing flavor. Trees are thrifty and productive with fruits showing marked resistance to brown-rot. Redchief should be considered in every planting of Nectarines.

CAVALIER A recent introduction by the Virginia Experiment Station which gives promise of replacing some of our yellow fleshed Nectarines. Cavalier is more highly colored than Redchief, not quite as large but good size, fine yellow flesh of very good quality and seems to have marked resistance to brown-rot. The tree is vigorous and productive.

GARDEN STATE (N.J.) A large, firm, nectarine. Orange yellow undercolor, overspread with red, yellow fleshed, freestone. Ripens late Haven season, vigorous grower and one of our more desirable nectarines.

RUBIRED Nectarine The origin of this nectarine is of large, size, smooth skin, fine red color, and excellent quality, with winery flavor which is particularly pleasing.

Oriental Persimmon

ORNAMENTAL — PRODUCTIVE — DELIGHTFUL
EASY-TO-GROW

The Oriental persimmon is adapted to most regions in the South and can be raised successfully as far North as Penna. The trees are vigorous of growth and bear young.

TANE-NASHI Large to very large, conical in shape. Light yellow changing to red as the fruit ripens. Flesh is astringent until fully ripe when it acquires a delightful flavor that is characteristic of the fruit.

NEW FUYUGAKI PERSIMMON

U. S. D. A. Introduction

This variety possesses several characteristics which places it in a class by itself. It is never astringent. It is edible while still hard and may be peeled and eaten like an apple. It keeps well and quality is of the best.

Fruit is medium in size, rather flattened, beautiful deep red color, and tree is a very prolific bearer.

HYAKUME The Hyakume persimmon is a large fruit grows to a height of about 10 feet producing a medium quantity of fruit of high sugar content. It is beautifully ornamental.

EUREKA A hardy variety with a most delicious flavor. Sometimes seedless. Big red-orange fruits literally covers the tree and hangs until soft and ripe. Slick, dark-green foliage adds to the ornamental value of this type grafted persimmon.

Prices For All Persimmons:

3 to 4 foot branched, \$2.95 each;	3 for \$8.45
2 to 3 foot branched, 2.35 each;	3 for 6.25

GRAPES

THE NATIONAL HEALTH FRUIT

Every garden should have plenty of grapes. **EASY TO GROW—EARLY TO BEAR—PROFITABLE.** Plant grape vines this year for future production and health.

DELAWARE One of the highest quality grapes in cultivation. Extremely hardy. Adapts itself readily to various conditions. Matures its crop early. Has very attractive appearance. Keeps and ships well and is immune to black rot. Clusters are well shouldered, compact, light red.

CONCORD The standard commercial grape. The old reliable Concord—the standard by which all the other black grapes are judged—a lifetime money-maker. Whatever other varieties are grown, no vineyard or arbor is complete without a liberal planting of Concord. Our Concord vines are well rooted and are guaranteed to give perfect satisfaction, producing huge quantities of deepest purple grapes of very finest flavor.

CATAWBA Bunches medium, shouldered; grapes large, deep coppery-red, juicy, sweet, rich.

CACO (Red) This new grape is of the highest quality, being so rich in sugar and excellent flavor, it can be eaten two weeks before it is ripe. The grapes are very large, bunch good size, compact and good form. The vines are strong growers, hardy and prolific. Ripens one week before Concord.

FREDONIA Gives promise of being the earliest good black grape. The vine is vigorous, hardy and productive and ripens its fruits two weeks earlier than Worden. The clusters are medium size and compact. The berries are large and round; the skin is thick and tough; the flesh is juicy, solid but tender and very good quality.

SHERIDAN A promising late-keeper grape to extend the Concord season. Under similar conditions the plants are just as hardy, vigorous, healthy and more productive than Concord. The bunches are large and compact; the berries are large and very firm; the flavor is sweeter and richer than Concord. Ripens week later than Concord.

PORTLAND Holds first place among grapes as an early green variety. Vine very vigorous, hardy and healthy. Bunches and berries larger than any other green grape. Very fine quality.

MOORE'S EARLY (Black) Early black, similar to Concord in looks and quality and ripens about two weeks earlier. Vines are healthy, vigorous and hardy.

NIAGARA Occupies same position among the white varieties as Concord among the black. Bunch and berries are large, greenish-white changing to pale yellow when fully ripe. Skin thin but tough; quality much like Concord.

STEBEN Appears to have real commercial possibilities for eastern grape growers. Its blue-black fruit ripens a day or two after Concord. It bears long tapering clusters which are compact and often shouldered or double. The berries are of medium size and have a very heavy bloom. The flavor is sweet and has a distinctive spicy tang. The skin is tough and the variety keeps very well in cold storage. The vines are vigorous, productive and hardy.

WORDEN Seedling of the Concord, which it greatly resembles. Ripens several days earlier.

The Sheridan Grape gives promise of supplanting Concord in Central and Southern Grape areas.

GOLDEN MUSCAT Possesses the rich golden color of Diamond and the fine muscat aroma of the European Muscat. For home use or roadside market it is one of the best. Vine vigorous and productive. Clusters large, berries handsome and best flavored grapes grown in eastern America. Ripens after Concord.

MUSCADINE TYPE GRAPE

Pre-eminently a grape of the south, grows luxuriantly from Delaware to the gulf and west to Texas. Vines vigorous, productive and much used for screening purposes.

SCUPPERNONG Fruit borne in small cluster of large berries which ripens unevenly, a desirable trait for southern sections. Skin is thick, tough, with many russet dots, reddish bronze, flesh pale green, juicy, tender, foxy, sweet to agreeably tart; fair to good. Sterile.

HUNT Vines vigorous, medium heavy foliage. Fruit large, black, hangs well, skin medium to thin, pulp medium, excellent flavor. We class this the best of all black varieties. Sterile.

DULCET One of the best eating varieties. Clusters large, fruit reddish purple, medium size, quality excellent, hang to vine well after full ripe.

YUGA Best of the all-purpose varieties. Clusters large, fruit medium, skin is thin and light, bronze color, quality excellent, ripens about October 31. Hangs to vine well after ripening. Recommended highly.

MALE POLLINATOR Must be planted with all Scuppernong varieties not blossom fertile. The male vine does not bear fruit and is used for pollinating purposes only. One vine will pollinate up to ten vines.

INSURE PLANTER SATISFACTION

PLANT BOUNTIFUL RIDGE RUST-RESISTANT, HEAVY CROWNED, LONG STOCKY ROOTED
PLANTS FOR CONTINUED SUCCESS.

NOW OFFERING TWO IMPROVED WASHINGTON
STRAINS FOR OUR PLANTERS.

NEW

ROBERTS' STRAIN MARY WASHINGTON

Developed by Mr. J. L. Roberts by selection from the original Mary Washington. It is a new type possessing very large spears, giving heavy yields, and having exceptional vigor. These outstanding characteristics make it the most RUST-RESISTANT strain being offered to the planter today. ROBERTS' STRAIN is being accepted by the large commercial planters of the east almost exclusively for their new plantings. START PLANTING TODAY.

MARY WASHINGTON

The old stand-by of asparagus planters the world over. A very strong grower with large stock, attractive green color and rich, tender spears. Also, RUST-RESISTANT and recommended for planting in most all localities. Bears early and with heavy yields.

McDONALD RED

This fine new RED TYPE RHUBARB originating in Canada is generally recognized as one of the best of RED RHUBARBS now offered. It is suitable for field growing or Forcing. The plants are healthy, strong growers, producing long deep red to pink ribs of very fine flavor. It can only be reproduced by divisions and plant prices are necessarily high but if a definite RED RHUBARB IS WANTED WE RECOMMEND THE McDONALD.

Prices for Strong Divisions

--------------	---------------	---------------	-----------------

BLACKBERRIES

NEW BLACKBERRY INTRODUCTIONS GIVE PROMISE

Selected a few years ago, supplies are now large enough to make them available to the planter. Try them this year for added profits.

BAILEY

Also a New York State introduction of recent years which is highly promising. The plants are vigorous, productive and hardy. The berries are somewhat larger than the Eldorado, moderately firm, without core, subacid, and of good quality. Ripens in early August about one week later than Hedrick. Seems to be the most promising introduction of recent years for commercial production.

EBONY KING

The sensational new, heavy bearing blackberry that is proving superior to the older varieties because of its ability to bear consistent heavy crops. Also contributing to the popularity of this new variety is the fact that non-bearing plants are easily distinguished and may be removed from the planting when necessary. Berries are large, glossy-black, with very high dessert quality. Fruit is suitable for processing, home use, and for fresh fruit markets. Fruit ripens early. Plants are thrifty and hardy. Plant Ebony King and get in the blackberry business this year.

PRICES FOR ALL BLACKBERRY PLANTS

6	12	25	50	100	500
\$2.00	\$3.85	\$7.50	\$14.00	\$22.50	\$95.00

BOYSENBERRY

A giant of the blackberry type. More flavorful than the blackberry and can be picked over a longer period of time. Yields are extremely high giving as much as 20 baskets of berries the second year after planting. The plant is a vigorous grower and should not be planted closer than six feet apart and seems to do much better when trained on wires similar to grapes. Plants are especially resistant to disease and drought. Try them this year.

LAVACA BERRY

A wonderful new seedling of the Boysenberry found near Lavaca, Arkansas, resembling its parent most but having higher production, larger berries, and more resistance to cold and disease. The berries are firmer than the Boysenberry, less acid, and higher general quality. Also superior for freezing. We feel it to be a handsome addition to your small fruits planting.

DEWBERRIES

LUCRETIA Perfectly hardy and remarkably productive; said to be the best of this class of fruit; ripens early, is often 1½ inches long by 1 inch in diameter; sweet, luscious and melting. This variety is highly recommended.

(One Year, No. 1 Plants)

BLUEBERRIES

THE ARISTOCRAT OF THE BUSH BERRY FAMILY!

A Treat to The Nation—They Can Be Grown in Most All Sections of The Country. Plan and Plant This Large Size, Fine Flavored, Wonder Berry.

Beauty of Leaf and Wood Makes The Plant Very Ornamental.

What Other Plant Can You Select That Offers So Much?

BOUNTIFUL RIDGE PRICES PUT OUR SELECTED BEARING SIZE BLUEBERRY PLANTS WITHIN THE REACH OF EVERY PLANTER

NEW, RECENT INTRODUCTIONS

BERKELEY One of the newer types of blueberries originating in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Berkeley is a cross between Stanley, Jersey and Pioneer. Fruit is light blue color and considered one of the largest blueberries yet introduced. Berries are not subject to crack; ripen about a week after Stanley. Plants are very productive.

BLUECROP Originated in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Bluecrop is a cross of Jersey x Pioneer with Stanley x June. Fruit clusters of Bluecrop are large; berries that are roundish—oblate; color very light blue; very firm; subacid; flavor good. Bluecrop ripens in mid-season with Concord, Pioneer and Atlantic. Bush; upright and vigorous; very consistent producer.

EARLILUE Originated in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Earliblue is a cross of Stanley x Weymouth. Fruit clusters medium size; berries oblate; light blue; very firm; subacid; flavor very good. Earliblue ripens early with Weymouth and June, the bushes are upright, very vigorous, well shaped and good producers.

HERBERT Originated in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Herbert results from a cross of Stanley with Jersey and Pioneer. Fruit clusters are loose; fruit ripens about the same time as Jersey and Dixi, earlier than Coville but later than Berkeley. Berries of Herbert are large and carry their size well through ripening season; firm; resistant to cracking; color about the same as Jersey, Rubel and Dixi; flavor is equal to the best varieties; hangs well on bush. Bushes flower late, are thrifty growers and consistently productive.

PRICES ON THESE NEW VARIETIES:
12 to 18 in. br. \$1.95 each; 4 for \$6.95

NOTE: Varieties listed in order of ripening. First fruit packed in south New Jersey usually about June 15th to 20th.

WEYMOUTH Earliest of all. Ripens berries quickly for early markets. Fruit is above medium in size and usually fair dessert quality. Bush erect, open, spreading, of average vigor.

JUNE During the past several seasons this variety has proved to be a fine producer, bringing high prices. It ripens a little before Cabot and continues through Cabot season. The bush is medium high with small leaves making it very attractive in appearance. The fruit is firm and of good quality.

CABOT One of the earliest of blueberries. Very vigorous and develops naturally to well formed plants. A favorite of the commercial grower because of its earliness, its dependability and heavy bearing habits and the large size of its well formed berries.

RANCOCAS The bush of slender, vigorous, upright habit rarely surpasses six feet in height. The winter twigs are a dark red. The berries are somewhat larger than those of Rubel and begin to ripen several days earlier.

Prices on Bearing Size, Heavy Rooted BLUEBERRY PLANTS

Our shipping season of Blueberry plants is continuous from October 20 to June 1st.

PRICES LISTED ARE PER PLANT

	Each	3-9	10-29	30-99	100 or more

NOTE: Be sure and buy your Blueberry Plants by graded height and age rather than by age alone. The plants we offer except 6 to 9 inch liners are of bearing age.

We suggest from eight to twelve plants for a family of 5 people. Ask for and follow our free cultural directions. Plant our Blueberries this year for pleasure and profit.

STANLEY A recent development fast being recognized in New Jersey Blueberry sections as one of the outstanding Blueberries. Vigorous plants, large berries, very productive.

CONCORD The bush is of upright habit and at maturity exceeds six feet in height. The young growth is bright red in winter. The berries are large, frequently reaching $\frac{3}{4}$ of an inch in diameter. They usually ripen a few days earlier than Rubel and are fine in flavor and appearance.

Blueberry Clusters at ripening time reveal the productivity of this wonder berry. Large in size — Beautiful to look at — Marvelous to eat.

Bountiful Ridge Selected

BLUEBERRIES

PROFITABLE . . . DELICIOUS

Our Plants Are Ready to Bear

PIONEER Named by Dr. Coville of the U. S. Department of Agriculture. The bushes are stocky, seldom exceeding 4 feet in height with a tendency to be broad rather than high. Its stems are stout and stiff and the winter color of the young growth is a delightful red. Pioneer produces heavy crops of berries close set in the cluster. They are larger than Rubel; of medium blue color and fine flavor.

ATLANTIC Late mid-season. A cross between Jersey and Pioneer which has two outstanding traits—one being its superior size and non-cracking during wet weather—the other is its handsome color and fine flavor. A heavy producer fruiting about with Rubel but much larger in size, better in quality and flavor. Requires less time and labor to prune than Rubel.

PEMBERTON One of the newer varieties being outstanding for its vigorous growth and heavy production of large to very large fruits. Berries are firm, having slight aroma and fine dessert quality. Ripens midseason.

RUBEL Well developed bushes stand six feet or more high, vigorous and beautiful. The stems are slender, but sturdy. The winter color of the young wood is a rich red. The large berries are of a fine blue color. Planted extensively for commercial fruit production.

JERSEY The bush is of vigorous habit and grows very large. The winter color of the young growth is a light red over a gold brown. The berries are the largest of any here listed, of a very light color and ripens the same time as Rubel.

DIXI Bush vigorous, open, spreading, productive. Berry very large, fair blue color, firm, good dessert quality. Late mid-season.

BURLINGTON Originated as a cross between Rubel and Pioneer to many due to complete separation of berry from stem. It ripens later than Jersey or Rubel and because of good keeping qualities may extend that season for 10 days. The fruit is above average dessert quality, being surpassed only by Stanley, according to most authorities. The bush is erect, vigorous and seems very healthy. The berries are a good blue color, medium to large and hold up in size to the end of the season. Recommended for trial in all sections.

COVILLE One of the more recent introductions of the U.S.D.A. selected to give larger berries of good quality and color. Ripening after Dixi, Rubel and Jersey, Coville is rated as one of our latest berries, large, good blue color, good quality, hangs well to cluster even when ripe thereby requiring less pickings and having thrifty plant.

BLUEBERRY CLUSTER

The large cultivated Blueberry seemingly has unlimited possibilities as a fresh or a canned berry. They have a place in every farm and home garden lot. We list below the best of the present day varieties.

Blueberries require an acid soil containing an abundance of peat or other partially rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage.

Where natural Blueberry soil is not available, ideal conditions can be created by mixing with the surface soil a liberal quantity of peat moss or partially rotted leaves or sawdust or chip dirt from an old woodpile.

RASPBERRIES

QUICK FREEZING, PROCESSING AND FRESH FRUIT MARKETS OFFER PROFITABLE
OUTLETS FOR THE COMMERCIAL GROWER

A HEALTH FOOD THAT SHOULD BE IN EVERY GARDEN.
A DEPENDABLE SOURCE OF INCOME TO EVERY SMALL FRUIT GROWER.

✓ CUMBERLAND (Black)

THE CUMBERLAND CONTINUES TO BE THE UNIVERSAL BLACK RASPBERRY. Its Popularity with the growers is unchallenged.

Cumberland has come down through the years and on its record stands as America's leading black raspberry. It is the choice of the commercial growers in the central and northern regions. One of the largest of the Black Caps; plants are healthy, vigorous growers, throwing up stout, well branched canes that produce immense crops of magnificent berries. The fruit is large and holds up well during the picking season; very firm and rated as one of the most delicious of black caps.

✓ NEW MORRISON

(BLACK RASPBERRY)

Gives promise of surpassing other Black Raspberries. Large size, very disease resistant, firm, consistent bearer.

Originated in Northern Ohio, pronounced the most promising late Black Raspberry being tested at the N. Y. Station. Mr. Morrison's original plants are over 15 years old and show no disease. Berries are extremely large, many measuring over $\frac{3}{4}$ inch in diameter and they do not crumble and have topped the Pittsburgh market by \$1.00 to \$2.00 per crate during the past several seasons. A little later than Cumberland, has fine dark glossy color and berries hold up well after picking, having exceptional good quality. A worthy new variety from all tests and observations.

Prices listed below.

✓ BRISTOL

An Outstanding NEW BLACK CAP

Growers pronounce this one of the best to precede the Cumberland.

Bristol is a recent introduction and the Geneva Experimental Station states it is one of the best Black Raspberries being grown at Geneva, N. Y. It ripens a week earlier than Naples or just before Cumberland a few days. The berries are large and firm, fairly glossy and very attractive. The quality is one of the best. The bushes are very hardy and a vigorous grower. The Bristol rates as one of the heaviest bearing Black Caps now known. From observation and reports coming to us on the behavior of the Bristol, we can recommend it highly to planters for either commercial markets or home use.

✓ NEW LOGAN (Black)

One of the New Logan's outstanding characteristics is its resistance to mosaic and other raspberry diseases. It seems to outclass other black raspberry varieties in this respect, and this is one of the primary reasons why it is gaining popularity. The berry ripens one week earlier than Cumberland. It is a heavier yielder and the glossy black berries are as large as that variety. It holds up well through drought, the last picking as fresh and free from seediness as the first.

A thrifty grower, and, although not as upright as Cumberland, our growers find this no objection if the Summer shoots are topped higher than normal.

BOUNTIFUL RIDGE PRICES ON ALL VARIETIES OF RASPBERRY PLANTS

PLANT BOUNTIFUL RIDGE SELECTED RASPBERRY PLANTS FOR INCREASED PRODUCTION

Plant This Year to Meet An Ever Increasing Market Demand For One of America's Most Popular Small Fruits

↓ LATHAM (Red)

Leads all Red Raspberries in Commercial Planting and Profits to the Grower

The new mosaic free, hardy red raspberry. Without question Latham is the most profitable Red Raspberry for commercial planting. It is absolutely hardy. It cannot be surpassed in productiveness, out-yielding even Cuthbert. Due to its rich brilliant red color it sells readily on market stands, and in addition is a delightful table berry and almost perfect for canning. The berries are large, round and unusually firm, exceptionally well suited for shipping to distant markets. It ripens evenly over a long season.

We have some of the finest Latham plants we have ever grown this year.

↓ SUNRISE

(The New Red Raspberry)

Combining Earliness — Hardiness — Quality

This new berry is said to ripen 10 to 16 days earlier than Latham. Its size is intermediate between Ranere and Latham, but nearer the size of Latham.

It has been very resistant to anthracnose, leaf spot, cane blight, and the resistance shown is probably one of the important factors in its ability to withstand low temperatures.

The color is bright red but turns dark red on ripening—the berries pick easily. They are firm, fine textured, juicy, non-crumbly, sub-acid in flavor with good raspberry aroma, and better in quality than Latham and better than Ranere under some circumstances.

We recommend SUNRISE for trial in all sections where Red Raspberries do well. Sunrise is replacing Chief in many home and commercial plantings.

INDIAN SUMMER EVERBEARING RED RASPBERRY

Size, quality, hardiness and productiveness combined in our greatest New Everbearing Red Raspberry.

TREES GROWING NICELY FOR N. Y. CUSTOMER

Walden, N. Y., May 20, 1956

Enclosed please find check to cover order No. 389138. The trees arrived in good shape and are growing very nicely.
Fred Baisley

LARGE ORDER TO SOUTH WEST ARRIVES IN FINA SHAPE

Elfrida, Arizona, March 1, 1956

The trees came through in good shape. I have them all out now and except to a very small loss they were in very good condition and a fine lot of trees. I received them on Feb. 3rd. I wish to thank you for the fine trees.

Lewis Grizzle

PLEASE NOTE

Our raspberry plants are dug early while dormant. The Black types are put in OUR OWN COLD STORAGE where they are kept with proper moisture at about 34 degrees F. The Red types are placed in this storage about April 1st. Our years of experience in handling of raspberry plants of both types and our modern storage enable us to offer our customers today PLANTS WHICH WE KNOW WILL GIVE THEM BETTER SATISFACTION IN EVERY WAY.

↓ Taylor Red Raspberry

**DISEASE RESISTANT — HIGH QUALITY
HEAVY PRODUCTION**

Recommended To Precede Latham

Introduced by N. Y. Experimental Station fall season of 1935. This beautiful berry should have the consideration of every commercial raspberry grower.

The plants are vigorous, hardy, productive, tall growing and make new plants rapidly. The sturdy canes hold the berries well off the ground. The berries ripen shortly before Latham, are large, long conic, bright attractive red, thick fleshed, very firm, sub-acid and of excellent quality being superior to Latham. The berries do not cling to the bush and carry well to markets.

↓ INDIAN SUMMER

**SENSATIONAL EVERBEARING
RED RASPBERRY**

Finest of all everbearing types yet introduced, bearing two crops a year.

**High Quality — Early Season — Heavier Fruiting
— Hardier — More Disease Resistant.**

More satisfactory every year as fruited over a wider area. Many growers planting Indian Summer for one crop variety due to its unusual vigor and productivity.

Introduced by the N. Y. Experimental Station, who state: "Indian Summer, the first autumn variety of any merit that has fruited at this Station, is a distinct type wholly unlike and much superior to known varieties. The quality is good and the season very early, starting a day or two later than June varieties. The fall crop commences in mid-September, continuing until stopped by hard freezes in November. The bulk of the crop is borne in October." The plants are above medium to tall, vigorous, upright, hardy, healthy, productive. Fruit is large and uniform, maintaining size throughout the season. Roundish-conic in shape, cavity of medium size, smooth light bloom, color medium red, juicy, tender, mild sub-acid, good.

From our observations and personal tests we can recommend trial planting in all sections from South Carolina to Canada, feeling that lovers of Red Raspberries will find the best in this variety.

↓ SEPTEMBER

A NEW EVERBEARING RED RASPBERRY

September everbearing is a cross between Marcy and Ranere, introduced by N. Y. Experimental Station. The plants are vigorous and disease resistant. The berries are shaped similar to Latham, bright red, firm, not crumbling. Ripens its fall crop 2 to 4 weeks earlier than Indian Summer and continues until frost. The spring crop ripens early and plants are very productive. This should prove one of our best everbearing varieties from our observations. Prices on page 38.

STRAWBERRIES

"THERE SHOULD BE A STRAWBERRY FIELD ON EVERY FARM."

THEY REPRESENT A LOW INVESTMENT COST AND ARE KNOWN AS THE FARMERS' GREATEST EARLY MONEY CROP

1956 PRICES FOR STRAWBERRIES AGAIN PROVE THE WISDOM OF MAINTAINING YOUR PRODUCING ACREAGE. NUMEROUS FARMERS POINT WITH PRIDE TO FACTS OF THEIR STRAWBERRIES CLEARING THEM \$1,000.00 PER ACRE, SOME \$2,000.00 AND SOME AS MUCH AS \$3,000.00 PER ACRE.

THE STRAWBERRY will long be remembered as a bright spot in every FARM INCOME for 1956. Even those poorly cared for fields brought in the dollars. All of this goes to prove they are one of the dependable crops for the Farmer to grow, and they sure can help out big bringing in that early money. Sure they are some trouble to grow but most all crops that pay well are some trouble to produce. With chemical weed and grass control getting better each year and VIRUS FREE PLANTS of most of our better varieties as well as the new varieties which are resistant to redstele root rot, it just isn't too much trouble to have a nice bed of strawberries. AND YOU CANNOT AFFORD TO BE WITHOUT THEM EITHER IN YOUR GARDEN OR LARGER ACREAGE. PLANT BOUNTIFUL RIDGE GROWN STRAWBERRY PLANTS THIS YEAR. THEY ARE BEST BY TEST.

THE GENERAL PLANT SUPPLY FOR 1957

We are located in one of the most concentrated Strawberry plant producing areas in the U. S. and also one of the largest producing areas for fruiting fields. It is natural the Nurserymen try to and have kept up their plantings so as to make the Del-Mar-Va Peninsula a sure and dependable place where you can get your plants year after year. Our own plantings and our neighboring nurserymen have maintained their normal plantings during spring 1956. We, as nurserymen, distributing plants all over the U. S. naturally do everything possible to have the best planting stock for you wherever you may be located. We possible change land where our plants are produced more often than any other Nursery in this area, because we consider it essential to growing good plants. Our soils are treated, Fertilizers containing Chlordane are applied at proper time, all our fields are dusted regularly with Parathion for control of insects that spread the Virus and other plant diseases. After making the rounds of our many fields for a personal inspection along with the State Inspector we can say that we have some of the finest plants this year that we have ever grown and a normal supply of most all varieties AND MANY VARIETIES GROWN ENTIRELY FROM VIRUS FREE FOUNDATION STOCK. YOU WILL LIKE OUR PLANTS THIS YEAR AND THE RESULTS THEY GIVE. PLAN AND PLANT THIS YEAR.

A field of our plants grown from VIRUS FREE STOCK as they looked August 1st, 1956. They are representative of the fine plants available at Bountiful Ridge for the coming year. Bearing the "Stamp of Quality" they will bring results.

Our Complete Detailed Culture Directions Will Be Sent Upon Request

Strawberry Culture

1. **Location, Soil and Preparation.** Adequate soil moisture is essential to growing good strawberries; whether the type soil selected holds moisture well. Also take care that the contour of the land is such that frost pockets will not form late in the spring to freeze out the blossoms. Sites which are not affected by late frosts are considered the best for strawberry culture. Plow and prepare the soil the same as for truck crops. Never plant in newly plowed soil and, however, as white grub worms are always present in this type of soil and will do a lot of damage to the plants after being set. The soil should be high in humus for best results. Rye and crimson clover make splendid crops to turn under as a natural soil soil builder. After using these, the land should be plowed far enough ahead so that cover crops have time enough to decay before the plants are set.

2. **Time To Plant.** In the Southern states from November to April is considered the best time for planting. March and April in the Central states, and for the Northern states, April and May the best time. We cannot too strongly urge early planting. Set the plants just as soon as the ground is workable in the spring. Should a cold snap follow, it will not damage the plants if they are properly set, and by setting early the plants will grow better and be more productive in every way.

3. **Distance To Plant.** We recommend that strawberry plants be planted in rows 4 1/2 feet apart, spacing the plants 15 - 30 inches apart in the row, depending on the variety. Everbearing varieties should be planted 12 - 16 inches apart. For planting in rows 3 1/2 feet apart and 18 inches apart in the rows, it requires 8,000 plants per acre and in rows 4 feet apart and 18 inches apart in the row it requires 7,250 plants per acre.

4. **Care of Plants on Arrival.** Set plants immediately on arrival, if possible. However, if it is not convenient to do so, the plants should be removed from the package and dipped in water to allow roots to slump up before setting. If the plants become dried out in transit, they should be placed in water up to the crowns for at least 3 hours. When this is done the plants should be set as soon as possible after being taken from the water, but in no case should the tops of the plant be wet when being set. If the sun is shining, because very often the tops will scald and damage the plants materially. If you are not able to plant immediately after the plants are watered, place the plants where they will be kept plants to cover the plants with mulch, or dig a V-shaped trench, open the bundles, distribute the plants evenly in the trench, and cover them even with the surface of the ground and firm the soil. In this manner they can be held until such time as you are able to plant.

NOTICE

In order to facilitate the movement of our strawberry plant orders, YOU WILL ALWAYS GET A SEPARATE ORDER ACKNOWLEDGEMENT FOR ANY STRAWBERRY PLANTS YOU ORDER AND YOUR STRAWBERRY PLANTS WILL BE SHIPPED INDEPENDENT OF OTHER STOCK ORDERED IN ALL CASES. We do this because of the perishable nature of strawberry plants so do not feel alarmed if you get one part before the other at the same time. OUR STRAWBERRY PLANTS WILL BE SHIPPED WHEN DIGGING CONDITIONS PERMIT AND ACCORDING TO YOUR DIRECTIONS AS NEAR AS POSSIBLE, SO PLEASE STATE DEFINITELY WHEN YOU WANT YOUR PLANTS SHIPPED WHEN SENDING YOUR ORDER.

VIRUS FREE PLANTS

Virus Free plants have had a great deal of publicity in recent years and it is well for the planter to have a better understanding of the meaning of VIRUS FREE PLANTS. Plants infected with virus are often abnormally yellow, stunted, are poor runner and berry producers, or more often exhibit a combination of the symptoms. Virus free foundation stock was attained only after a complex system of indexing was devised to determine the presence of one or more of the strawberry viruses. The virus free strains can be continued by controlling the vector, an aphid, with applications of parathion (1% dust or 14 days from May) and the rate of 20 pounds of dust or 14 days from May (1% spray) per acre. However, the fact that virus free plants are used does not eliminate the effects of other diseases and insects already known to the plant grower, many of which are also controlled by following the above dusting or spray program.

We at Bountiful Ridge are maintaining a dusting schedule on our plants, growing in fumigated soil for the control of nematodes, and using a chlordane additive in our fertilizer in order to give you, our customer, the best possible stock available for your planting needs.

Those varieties listed as VIRUS FREE, grown from VIRUS FREE FOUNDATION STOCK, and cared for as stated above are believed to be SUBSTANTIALLY VIRUS FREE. To our knowledge, no state or federal agency can issue a certificate stating strawberry plants are virus free because of the complications involved in determining a large number of plants VIRUS FREE.

"THE STAMP OF QUALITY"

This seal on the label of your strawberry plants indicate they are Bountiful Ridge grown and is your guarantee of True-to-Name, Thrifty, Productive, Dependable Plants.

PROPAGATION

These pictures show some of the complex operations involved to give you the very best plants possible. At left is pictured our improved row duster in the process of applying the recommended amount of Parathion for the control of the Virus vector. At right is shown the fall top-dressing of fertilizer done in mid-August. All fertilizer used includes Chlordane to further eliminate the presence of virus and injurious insects. This is the beginning for the plants labeled with "THE STAMP OF QUALITY".

DIGGING

All plants from Bountiful Ridge are dug with our improved digging equipment. The blade is 36 inches wide and lifts the entire row at the desired depth controlled hydraulically. This gives uniform roots under all digging conditions. Plants are loosened in the soil and allowed to remain, unexposed until removed by our large digging crews. Strawberry plants dug by this method are never bruised or torn giving them the best possible chance for survival. Strawberry plants can be hurt very easily and it is very important that they are well cared for. You can be SURE if they are plants from Bountiful Ridge.

PACKING AND STORAGE

All strawberry plants are brought directly from our grading and counting sheds and placed in this cold storage until packed for shipment to our customers. The storage pictured was especially constructed for the storage of strawberry plants. With automatically controlled circulation, moisture, and temperatures, plants very often become invigorated when placed in it. Also note the improved shipping cartons used to give the maximum air movement and cross-ventilation. This helps to insure that the plants will arrive in good condition. We can ship a few thousand to truckloads from this cold storage throughout the winter with great success. LET US FILL YOUR PLANT ORDER THIS YEAR WITH PLANTS BEARING THE STAMP OF QUALITY.

Save Hand Labor . . . Stop Weeds The Easy Way

CRAG Herbicide-1 kills weed seeds as they sprout. Just dissolve it in water and apply with a hose-end sprayer, garden sprayer, or sprinkling can. Prevents weeds in roses, borders, hedges, foundation plantings, evergreens, perennial flowers, strawberries, asparagus, and in patios, driveways, and walks. Also prevents crabgrass in lawns. It's safe to use too—because CRAG Herbicide-1 doesn't become active until it's been in the soil. There's no danger to the leaves of plants.

4 oz. can treats 3,000 sq. ft. of garden	\$1.50
1 lb. package treats 12,000 sq. ft. of garden	4.49

SPARKLE

A VERY HEAVY PRODUCER
A GOOD PLANT MAKER

Worthy of Planting Wherever Premier Succeeds.

The Sparkle is a recent introduction of the N. J. Experimental Station. Sparkle is a prolific plant maker with good healthy foliage and reports coming to us say it is very productive. Berries are firm under Maryland growing conditions. Berries are medium size, uniform in shape and as its name indicates has a bright red color, turning somewhat dark on fruits that are over-ripe. The quality of the berry is excellent. Ripens midseason, being a little later than Premier. Requires good moisture for best results. Sparkle should be tried extensively in N. J., Eastern Penna., New York, and other New England States.

Another field of Bountiful Ridge Grown VIRUS FREE plants as of August 15th, 1956. These are Blakemore in foreground. With 2 months to grow these rows will just about be together. They are living examples of vigor. Your orders for Blakemore will be filled with plants from this and other fields equally as good, all virus free.

ARMORE

PROVING MORE AND MORE A GROWER'S FAVORITE
EACH YEAR

Introduced by the Missouri Experimental Station this variety has proved more productive than 60 others in actual growing tests. Berries are of excellent color and rate high in flavor. Fruits over a long period and makes a good fruiting row. Firmness rates it a superior shipping variety. We would recommend it for trial throughout the Premier, Blakemore growing areas. Our Armore plants are Virus Free.

The BLAKEMORE

THE SOUTH AND CENTRAL EAST'S GREATEST
EARLY COMMERCIAL BERRY.

VIRUS FREE — NO YELLOWS — STRONG HEALTHY

In the south and central berry areas, the Blakemore has proved to be one of the finest of all Early shipping berries. The old type originally released showed a tendency to sport into inferior yellow foliaged strains. It is a very free plant maker and responds quickly to good treatment. It is an abundant bearer, the fruit averages large and retains its bright attractive red color even after being picked several days. Quality is superior to Missionary and Klondike. It will ripen a few days earlier than Premier. The foliage is healthy and vigorous. The plants hold up well during a drought. The berries are firm and unexcelled as a long distance shipping berry and preferred by all Strawberry processing companies. Plant our Virus Free Blakemore.

FAIRFAX

They Are Truly Magnificent — Examples of Productive —
and Wonderful Quality.

The Fairfax ripens about the same time as Premier, and its fruiting season extends over a long period. The quality of the Fairfax is equal to the best of our older varieties. The berries are large to very large, of a bright red color at picking time. Like the Belmar it turns dark after being picked for several days but retains its flavor and firmness. Our plants of Fairfax are Virus Free.

Tennessee Beauty

HEAVY YIELDS — LARGE, BEAUTIFUL, FIRM BERRIES
IS FAST MAKING IT A FAVORITE IN CENTRAL
AREAS FROM NORTH CAROLINA NORTH TO
CENTRAL OHIO AND PENNA.

Introduced by the Tenn. Experimental Station, now being grown over a very wide area. Tennessee Beauty is considered the main commercial berry in many sections, and we can certainly recommend it to anyone who wishes a profitable midseason to late berry of unusual beauty and shipping ability. It is a free plant maker, very productive of large bright red, firm, high quality berries which are excellent for fresh use, shipping, preserving or freezing. Tennessee Beauty is being grown commercially in most all of the Southern states north to central Ohio, Penna. and N. J. and even the coastal area of N. Y. and New England. We recommend this variety and can supply in Virus Free or regular stock.

Tennessean No. 965

The TENNESSEAN was originated at West Tennessee Experiment Station. It is a cross between two Tennessee unnamed seedlings. TENNESSEAN ripens usually ahead of Blakemore which combined with late blooming habits appeal to many growers where crops are lost by late frosts. It resembles Blakemore somewhat with the same bright attractive color and good cap.

AMBROSIA

A very big, very late berry. Easy to grow and get a good fruiting row. Plants quite productive, berries resemble Big Joe, very pretty. Quality is good. Berries average large in size, bright and firm. Where a very late berry is desired, Ambrosia is the best to grow. Ripens when most other strawberries are gone.

New! STELEMASTER

A GREAT BERRY, RESISTANT TO ALL RACES
RED-STELE ROOT ROT NOW KNOWN IN
EASTERN U. S.

Stelemaster formerly tested as Md.-U.S. 2159 originated as a seedling from cross of Fairland X Md.-683. Released October 1st, 1954.

Stelemaster ripens about with Blakemore or just a little later. Berries are medium to large. Holds size well throughout season. Generally uniform and smooth, medium red with a glossy surface. The flesh is light red, firm, juicy, and flavor is mild subacid. Stelemaster plants are vigorous, very productive and highly resistant to all the races of red stele known in Eastern U. S. Leaves are resistant to scorch but does leaf spot under some conditions. Our own test plot produced at rate of better than 12,000 quarts of berries to acre in 1954. It is just a hard berry to equal and while it has not been tested over a wide area it should have the consideration of every planter, especially where red stele is present in the soil. Prices on page 47. Our plants of Stelemaster are Virus Free.

A full quart of STELEMASTER BERRIES. Note its general good characteristics.

PREMIER A LEADING STRAWBERRY IN NORTHERN PRODUCING AREAS

An Old Favorite And Possibly The World's Greatest Strawberry
Frost-Proof, Productive And Dependable

Premier, America's Most Popular Berry

CATSKILL

ONE OF THE VERY GOOD MID-SEASON BERRIES.
IT HAS PROVEN ITS RIGHT AS A LEADER OF
MID-SEASON VARIETIES.

A vigorous grower; somewhat frost resistant, extremely productive; berries very large and good quality.

The Catskill is a product of the New York Experiment Station, being a cross between Marshall and Premier. It has proven up under test for the past many years and is now recognized as one of the best mid-season berries in cultivation. The foliage is healthy in this latitude. It is a good plant maker and has proved to be extremely productive. The berries are as large as Big Joe and Chesapeake and of good quality although not rated quite up to Premier and Fairfax. We strongly recommend Catskill for this and more Northern sections.

VIRUS FREE CATSKILL: This great berry is on the road back to being our No. 1 midseason berry in Northern Areas with the advent of Virus Free Catskill plants. It does ones heart good to see Catskill again making heavy fruiting beds of plants and those large handsome berries. Plant Bountiful Ridge Grown Virus Free plants this year. They are wonderful.

TEMPLE

Seldom does a New Introduction attain the immediate approval accorded the Temple. Large Size—Heavy Production—Excellent Quality and resistant to Red Stele combine to commend it.

The Temple is a U. S. D. A. cross between Aberdeen and Fairfax made in 1938 under number 84-AF. In 1939 it was selected by Dr. Temple and named in his honor. The Temple is an exceptionally vigorous variety, makes a dense bed. The foliage is highly resistant to leaf scorch disease. It is quite productive and nearly as early as Blakemore. The berries are large, blunt conic, smooth, uniform and have large attractive caps. The desert quality is good. Thus far the shipping tests have shown it to be well suited to long distance transportation. From our observations of the variety it seems to be well adapted to moist fertile soil.

MISSISSIPPI CUSTOMER PLEASED

Shelby, Miss., April 2, 1956

The trees and berry plants are looking fine as is usual with anything from Bountiful Ridge. Thank you.

Very truly yours,
Robert C. Bullock

Premier still stands as a real money-maker. It has a record very hard to equal as an early market berry, and we cannot say too many good things about it. Until the introduction of the Blakemore it had no equal as a variety that would adapt itself to most all soil and climatic conditions, whether the soil was sandy, clay, loam or rocky, whether it was planted in North Carolina, Mass., or Ill., you always had an abundance of new plants that were thrifty and disease free. It can be considered almost frostproof. It has never failed in a crop in this section since it was introduced. The berries average large and hold up well under heavy crops and unfavorable seasonal conditions; it ripens over a comparatively long period, from two to three weeks; the berries have an attractive bright red color and unusual quality. It is moderately firm. It is one of the best of the tried and proven early varieties.

HOWARD H. Conceded by all eminent horticulturists to be the same as Premier.

VIRUS FREE PREMIER are unusually vigorous and free plant makers. The foliage is lighter in color and the berries are lighter in color and possibly not as firm as the old type Premier but berries have Premier shape and quality with the added advantage that you will always be assured of having a wide picking bed. Plant Bountiful Ridge grown Virus Free Premier this year.

NOTE—WE ARE GROWING THE OLD TYPE PREMIER AS WELL AS THE VIRUS FREE PREMIER. PLEASE STATE WHAT TYPE WANTED WHEN PLACING YOUR ORDER.

New POCAHONTAS

FAST BECOMING THE GROWERS' FAVORITE
THROUGHOUT THE EAST

Since its introduction Pocahontas has really come to the front in its field. Pocahontas has been widely acclaimed throughout the berry producing areas as the best of the new strawberry varieties. It brought highest prices, wherever sold this past spring for any and all markets—fresh, frozen, or processed.

Originated at Beltsville, Md., and released in October, 1953 by the U.S.D.A. and the Va. Truck Exp. Station at Norfolk, Va. It has been thoroughly tested and found adaptable from the Carolinas to New York state and as far west as Arkansas. The plants are vigorous and very productive. Berries ripen about a week later than Blakemore, are large in size, color a vivid red, are glossy with tough skin and firm as Blakemore. The flavor is tart and good. Ideal for freezing. Our Plants of Pocahontas are Virus free. Prices page 47.

The NEW POCAHONTAS plants as of Aug. 15, 1956. Virus free, thrifty plants like these are the right start to berry growing success. Yes, we grow several million plants each year. They are the best by test.

BOUNTIFUL RIDGE GROWING STOCK BEST THEY HAVE SEEN

Mullica Hill, N. J., Oct. 7, 1956

Dear Sirs:

My son Lester and I want to thank you for taking your time to show us your nursery stock. We will want some of your strawberry plants in the Spring. Your trees and berry plants are the best we have seen this year. Thank you again. I remain,

Yours truly,
Oscar Shoemaker

New DIXIELAND

Dixieland, tested as U.S.D.A. 3758 is a Tenn. Shipper X Midland cross, and was released for introductions by the U.S.D.A. and the North Carolina Experiment Station in November 1933. Ripens about with Blakemore, averages larger than Blakemore, and slightly deeper red, with glossy skin, and seems to be very firm and uniform in shape. Plants are vigorous and productive, yielding over 400 24 quart crates to acre in test plots. Seems especially well adapted to North Carolina Area and west to Missouri in this belt altho it is doing mighty fine on the Eastern Shore of Md. and Va. The flavor is acid and good. Our Plants of Dixieland are Virus free plants. Prices are listed on page 47.

KARDINAL KING

ORIGINATED IN MICHIGAN WHERE IT GAVE RECORD BEARING CROPS. A FULL FLAVORED SOLID RED BERRY FOR TABLE AND FREEZING. RIPENS SLIGHTLY AFTER PREMIER. WORTHY OF TRIAL. A HOME RUN BERRY EVERY YEAR.

Kardinal King has created something of a sensation in Michigan by producing record breaking crops which outsold all other varieties in competition. Buyers praise it for high shipping quality. Does equally well for canning and freezing.

The plants grow large, making wide fruiting rows. Berries ripen slightly after Premier and continue through the late season. The fruits are large, solid red, juicy and sweet. We recommend Kardinal King for trial in all areas where Premier and Catskill grow successfully.

A full quart of KARDINAL KING Berries. Note large size.

ROBINSON

(SCARLET BEAUTY)

A comparatively new variety being given a lot of favorable comments from most Michigan plant growers. The berries are medium to large size—beautiful bright red color and firm. It seems to be a free plant maker and the foliage is healthy. Berries begin ripening about 7 to 10 days later than Premier. From all reports the Robinson is a worthy mid-season to late berry especially adapted to commercial growing and we feel should be given a thorough trial under eastern central and northern growing conditions.

VERMILION (New) Ill. 41-31

VERMILION IS GAINING IN FAVOR

IT SHOULD HAVE GROWERS' CONSIDERATION THROUGH THE CENTRAL AND NORTHERN AREAS

Released by the Illinois Agricultural Experimental Station and said to be Red Steele Resistant, being a cross between Red Star and Pathfinder.

The plants of Vermilion are medium to high in productivity and range between Premier and Fairpeak in vigor. The foliage is resistant to leaf spot, leaf blight and leaf scorch. The flowers are perfect. Fruit ripens about with the first Premier and picks over a two week period. The fruit is medium to large, round to round conic in shape, smooth and very glossy, medium red and evenly colored, flesh is light red. Vermilion ships well. Plant our Virus-free Vermilion.

New ALBRITTON

A promising new variety for the Carolina area.

Originated and tested at N. C. Experiment Station in cooperation with U.S.D.A., introduced in 1932. Tested mostly in N. C. it may replace Massey as it outyields Massey and Blakemore in that area. Berries are large, Ripens Early, have a light red attractive color. They are firm enough for distant shipping. Plants are vigorous and very productive. Very worthy of trial in South Central area. Our plants of Albritton are Virus free. Prices on page 47.

GRANDVIEW

VIGOROUS PLANTS—LARGE, ATTRACTIVE, DELICIOUS
BERRIES — GROWER SATISFACTION

Named from the town near which it originated in Indiana. Sent to us for trial as an improved CATSKILL, however it does not resemble the Catskill much in fruit or berry in our trial plantings.

Berries are large, conical almost like Midland, attractive color, extremely high flavor and very productive. Plants are vigorous, forming large crowns and making good fruiting beds. Foliage seems resistant to leaf spot and scorch. Berries are held well off ground by strong fruiting stems. After fruiting this berry in our test plots our conclusion is that it is just too good to be kept under a basket and we are passing it along to our customers. Originating in Indiana, doing well here in Maryland, we feel it will prove a valuable berry for the commercial growers in the central and northern areas.

BIG JOE

A BEAUTIFUL BERRY — A MONEY-MAKER

No other mid-season berry has stood the test of varied soil and climatic conditions to which the Big Joe has been subjected to for the past twenty years and come through with the fine record it has for general hardiness, productiveness and being a profitable berry to grow. It will withstand as much rough treatment as any variety we know of and still come through. It is a very large attractive, dark bright red berry that will sell on any market.

JERSEYBELLE

Originated from a cross made in 1947 by Dr. F. A. Gilbert, and tested as New Jersey 7-A. Ripens late mid-season to late in the spring fruiting season. Plants are husky, vigorous with large leaves and large crown. Will give a good matted row if grown on good soil with sufficient moisture. Berries large, orange-red in the early stage of ripeness turning dark red when fully ripe. Berries have waxy-glossy appearance with good green cap. Jerseybelle is a good holding variety and excellent shipper. The seeds are prominent becoming yellow at maturity. A good yielder with crops of 4,000 to 10,000 quarts per acre being reported.

EMPIRE

A new variety introduced by the New York Experimental Station at Geneva. Tested in many sections, EMPIRE is a vigorous grower making good fruiting bed. Does not produce as many berries per plant as Premier but berries are generally larger, firm, of excellent flavor and freezing quality. Grows well in Premier sections. EMPIRE shows much promise and we recommend it for trial.

Empire berries picked at Princess Anne, becoming more and more popular each year in central and northern areas.

Everbearing Strawberries

Big, Luscious Berries Thru Late Summer and Fall Pay Big Dividends To
The Commercial and Home Grower

THE NEW

PLANT PAT 993

red rich
EVERBEARING

TRADE MARK

MASTODON

(EVERBEARER)

A True Everbearer And Remains One Of The Finest
Of Our Everbearing Varieties

It outyields some of our best June bearing sorts during their season and continues to bear throughout summer and fall. Berries of amazing size and superior quality, being very firm and attractive. For best results newly set plants should be disbudded up to July 1st. They will then bear 'til frost. They are grown very successfully by hill culture methods as well as matted bed row system. Where hill culture is practiced, set the plants 15 inches apart in the row and have rows from 2 to 2½ feet apart. This produces strong, robust hills that produce very heavily.

GEM

Proving Most Outstanding And Dependable
Each Year

One of the good everbearing varieties of recent introduction. Coming from the Middle West, it has adapted itself to our conditions on the Eastern Shore very readily. We find it to be an excellent plant maker, very productive. Berries are large and real beauties of excellent quality. We can recommend Gem.

Plant Bountiful Ridge selected heavy fruiting strain Gem for a dependable everbearer.

STREAMLINER

Reports Continue Favorable On This
New Everbearer

Public approval from many sections attest its fine quality, rich color and real strawberry flavor. Include a generous planting for year around goodness.

Streamliner is probably receiving more publicity than any everbearing strawberry of recent introduction. Coming from the west it seems to be adapting itself to most central and eastern growing conditions. Plants seem vigorous and produce good spring crops and bear almost constantly during late summer and fall. Berries are medium to large, rich red color throughout, having a real strawberry flavor. Streamliner makes a good fruiting bed and we recommend it for trial.

SUPERFECTION

(EVERBEARING)

IT'S NEW — IT'S BEAUTIFUL — IT'S GOOD EATING.
PLANT SOME IN SPRING, PICK BERRIES FROM
LATE SUMMER UNTIL SNOW FLIES

Originated in Michigan and promises to take the place of many old time varieties due to its many excellent characteristics. The plants adapt themselves to any soil without extra care and are free plant makers. The berries are firm, large, round and red throughout, they have a good flavor and a pleasing taste. The berry is firm and does not discolor when taken from the plant. Worthy of trial planting in all sections.

The Reddest, Sweetest, Tastiest Everbearing Strawberry offered in years. Promises to be rated among the greatest everbearing varieties.

The "RED-RICH" is the result of 15 years of experimenting and cross-breeding by Marion Hagerstrom, a Minnesota farmer, who has bred strawberry plants for more than 20 years.

"RED-RICH" is a cross between Fairfax and Wayzata and produced 10,000 quarts per acre in the 1949 test plots. It is distinguished from all other strawberries by its deep red color which runs through the entire berry. The fruit keeps well after harvesting and may be held for several days in good saleable condition, so necessary to heavy production.

The new plant makes possible for the first time a quick freezing and perfect thawing strawberry without loss of firmness, flavor or natural sugars, offering farmers a greatly expanded market.

Plants available fall and spring.

PRICES ON "RED RICH" STRAWBERRY PLANTS:

12	25	50	100	200
\$2.95	\$5.00	\$8.50	\$15.00	\$29.00
300	500	750	1000	
\$38.30	\$62.50	\$91.85	\$120.00	

The "New" Plant-Spaced-Sawdust Mulch System Produces More Everbearing Strawberries

Diagram shows method of planting Everbearing Strawberry patch that will produce heavy crop of delicious berries the first season.

Note that plants are set in beds 4 rows wide with plants spaced 1 foot apart each way.

A 24 inch path between the beds allows for picking, weeding, where necessary, or other work to be done. A patch 15 by 40 feet will take 300 plants and should produce 100 quarts the first season and thereafter.

This new system first observed by us at Wooster, Ohio, 2 years ago and repeated observation has proved the merit of growing Strawberries in this manner.

Soil should be in prime condition with liberal amount of fertilizer worked into the soil before planting, or fertilizer can be applied with first working of the plants. SAWDUST should be 6 months to 1 year or more old and applied after first working and fertilizer is applied. You should put 1 inch of sawdust at first application thoroughly covering the surface and around the plants, more can be put on later but never have it more than 1½ inches deep. All runners should be removed from plants as they form and grow them strictly by hill system.

Space herein limits full description, but we invite you to write us for complete instructions on how to prepare your soil, set and care for your plants to fruit production.

Any everbearing type of plant may be used, but such varieties as Mastodon, Superfection, Streamliner and Red-Rich seem to respond best. Write today for full directions.

Prices All Varieties Strawberry Plants

OUR SHIPPING SEASON

SPRING SHIPMENTS: Since we installed our cold storage we can safely continue our shipments up to JUNE 15th. WE SHIP CONTINUALLY THRU THE WINTER MONTHS TO SOUTHERN AREAS.

FALL SHIPMENTS: We cannot accept plant orders for shipment before SEPTEMBER 20th, as normally the plants will not be sufficiently rooted to give satisfaction.

* **VIRUS FREE PLANTS:** Varieties listed and designated with (*) have been grown from Virus Free Foundation Stock and are believed to be substantially Virus Free plants. We have followed an approved dusting program on all of our plants including those that are not Virus Free and we believe you will find all of our plants to be of exceptionally high quality this year. On some varieties marked (*) we have both Virus Free and our regular B.R.N. strain stock. Please state type wanted if you have a preference.

*Varieties we can supply in Virus Free Stock.

OUR STATE INSPECTORS ISSUE SPECIAL STRAWBERRY PLANT CERTIFICATE

With existing plant diseases you cannot afford to take chances.

UNIVERSITY OF MARYLAND

STATE HORTICULTURE DEPARTMENT

CERTIFICATE OF INSPECTION OF STRAWBERRY PLANTS

March 1, 1956

Duplicate of Number 2

This is to certify, that the STRAWBERRY PLANTS OF THE BOUNTIFUL RIDGE NURSERIES, Princess Anne, Md., have been inspected in accordance with the laws of Maryland, 1898, Chapter 289, Section 58, and the Rules and Regulations promulgated by the State Horticulture Department, 1929, governing the inspection, certification and transportation of Strawberry plants within the State, and that said plants are apparently free, so far as can be determined by inspection, from the RED STELE ROOT ROT and other dangerously injurious plant diseases and insect pests.

This Certificate is valid until September 30, 1957 unless sooner revoked.

GEO. S. LANKFORD, Chief Inspector

L. O. WEAVER, State Pathologist

The Wild Rose Living Fence

(ROSA MULTIFLORA JAPONICA)

**A Living Fence For Years To Come.
Needs Little Pruning — Disease Free.**

Multiflora Japonica Roses are becoming more popular as they become better known and are being used effectively to decrease soil erosion, dividing line fences, wind breaks, screens for unsightly objects, to confine farm animals and as snow fences in winter, in fact wherever a hedge or screen is necessary Rosa Multiflora is indicated.

The plants grow rapidly in most all types of soil and produce a fence up to eight feet in height in three to four years, then it stops, getting no taller. The fence needs no pruning or care after the initial setting.

In setting Rosa Multiflora Japonica the plants can be spaced to suit individual requirements. Where a close hedge or screen is desired, we suggest planting one foot apart. For more open hedge they may be planted two or three feet apart in a single row, naturally the closer they are planted the denser the hedge. If planted in the fall, remove the tops but wait until spring and cut back 2 or 3 buds. Mulch well where fall set.

The fence is a beautiful sight in bloom putting on a gorgeous display for about two weeks. Thereafter seed pods are formed to furnish food for the birds.

The foliage is a beautiful green and is free from disease and insect pests.

Prices:

Jumbo, branched, 18" up: 10 plants \$2.50; 25 plants \$4.50; 50 plants \$8.30; 100 plants \$15.00; 500 \$60.00.

CLIMBING VINES

THE BEAUTIFUL CLEMATIS

CLEMATIS JACKMANI (Large Flowering Clematis). It is a strong grower and produces a mass of intense violet-purple flowers 4 to 6 inches in diameter from July until October. 2-year, \$1.30 each.

CLEMATIS, NEW CRIMSON STAR. A truly large-flowering Red Clematis of the Jackmani type. More and larger blooms on vines of unusual vigor. Price, 2 yr. plants \$1.75 each.

Other large flowering Clematis we have —

THE PRESIDENT. Large deep purple. **LANUGINOSA CANDIDA,** large pure white. **Mme. BAKON VAILLARD,** large deep pink. Price 2 yr. strong plants, \$1.75 each.

CLEMATIS PANICULATA (Small Flowering Clematis). A great novelty from Japan. This variety of Clematis has proven to be one of the most desirable, useful and beautiful of hardy garden vines. Prices, 2 yr. 90c each; \$2.25 for 3.

IVY — A PLANT OF DISTINCTION

ENGLISH IVY, HEDERA HELIX. The popular evergreen vine with medium sized dark green leaves is extensively used in this country for covering brick and stone walls and dwellings. 2-year, 90c each; \$2.50 for 3.

BALTIC IVY. Looks like English Ivy but is much hardier and has smaller, dark green leaf. Does best in shade. A wonderful evergreen vine for the north or west side. Thrives well up into the Northern states. Is particularly useful as a ground cover and bank binder. Stays green year around and grows in shaded areas. Spreads and covers rapidly. Plant 2 feet apart each way for ground cover. Potted Plant 59c each; 2 for \$1.12; 10 for \$5.29; 50 for \$22.50; 100 for \$38.95.

HALL'S JAPAN HONEYSUCKLE (L. Halleman). A strong vigorous vine with pure white flowers, changing to yellow foliage remains green well into winter; very fragrant and covered with flowers almost the entire season. 2-year strong plants, 65c each; \$1.60 for 3.

PURPLE WISTERIA. Flowers light purple and blue in early spring; borne in large drooping clusters. Well adapted for arbor plantings. Prices, 2-yr. grafted plants, \$1.50 each; \$4.00 for 3.

KUDZU VINE. Large foliage and dense shade growth covered with white silvery blossoms from early August; rosy-purple, pea-shaped—in small racemes. Good porch vine wherever it is able to withstand the cold winters. 2-year 65c each; \$4.00 for 3.

SILVER LACE VINE. A quick growing climbing vine that can certainly be recommended for its thriftiness and beauty. The foliage is heavy and it is literally covered with white silvery blossoms from early August until fall. \$1.25 each; 3 for \$3.50.

SILVER LACE VINE

FLOWERING SHRUBS

BEAUTIFY YOUR HOME AT LOW COST WITH BOUNTIFUL RIDGE FLOWERING SHRUBS
A PROFUSION OF BLOOM—SPRING—SUMMER—FALL.

TALL GROWING AND DWARF TYPES, SUITABLE FOR SPECIMEN OR GROUP PLANTINGS.
ALL ARE LISTED AT MONEY SAVING PRICES.

ALL SHRUBS ARE WELL BALANCED 2 YEAR FIELD GROWN STOCK, BLOOMING SIZE.

In many cases it would be better to plant Shrubs in groups of several to one side of the lawn instead of following the method of planting one in a certain place and spoiling the effect of the open lawn. In most cases, three, six, eight, or twelve should be used in a particular grouping. Several such groupings make an excellent border or foundation planting.

Forsythia Intermedia
(Border Forsythia)

SNOWBERRY

MOCK ORANGE

WEIGELA BLOOMS
(Hypericum)

ALTHEA (Rose of Sharon). Double assorted colors: red, blue and rose. 2 to 3 feet, \$1.00 each; 3 for \$2.70.

BUTTERFLY BUSH (Buddleia)

One of the best everblooming shrubs. These new types are truly magnificent.

CHARMING. Magnificent long panicles of Rose Pink flowers cover this plant from early midsummer until frost. Some panicles being 12 inches long. Very vigorous grower, good foliage and hardy in most sections. One of the best of recent introduction. Heavy 2-yr., 2-3 ft. plants, \$1.25 each; 3 for \$3.45.

ILE DE FRANCE. The grandest of all purple types of Butterfly bush. Long tapering panicles borne in great profusion through the summer, dark blue with golden stamens, presents a gorgeous sight. Heavy 2-yr., 2-3 ft. plants, \$1.00 each; 3 for \$2.85.

EMPIRE BLUE. Leads all other blue Buddleias for beauty of its Astor-blue merging with delicate lilac tones giving an exquisite shade of blue. No. 1 Field grown plants, \$1.10 each; 3 for \$3.00.

PINK DAWN. Compact plant four to five feet high with deep green foliage. Flower pink throughout. Excellent as a cut flower with sprays two to three feet in length. Truly the finest pink of them all. No. 1 Field grown plants, \$1.10 each; 3 for \$3.00.

ROYAL RED (New). Plants four to six feet high with deep leathery green foliage. Produces flowers from July until frost. Sprays of 2 foot length in a rich dark royal purple which intensify to almost red under artificial light. No. 1 Field grown plants, \$1.10 each; 3 for \$3.00.

CREPE MYRTLE

Blooms throughout the summer great clusters of delicately fringed flowers. Perfectly hardy as far north as New Jersey. We have pink and red. 18 to 24 inch, \$1.00 each; 2 to 3 feet, \$1.25 each.

FLOWERING ALMOND, DOUBLE PINK. A beautiful tree; covered in May with rose-colored blossoms like small roses; hardy. 18 to 24 inch, \$1.00 each; \$2.85 for 3.

WHITE SNOWBERRY. Beautiful, rose-pink blossoms in July are followed by waxy white berries that are very ornamental all winter. This excellent, hardy, low-growing shrub does equally well in shady or sunny locations. 2 ft. size, \$1.25 each; 3 for \$3.45.

JAPAN QUINCE SCARLET. Flowers a bright scarlet crimson borne in great profusion in early spring; foliage bright glossy green. 18 to 24 inch, \$1.00 each; 3 for \$2.75.

VITEX (Agnus Castus). A vigorous bush form Shrub with attractive Blue Flowers borne in dense spikes during late summer and fall. Good foliage. 2 to 3 ft. branched, \$1.25 each.

DEUTZIA (Pride of Rochester). Produces white flowers tinged rose; vigorous grower; profuse bloomer, earliest to bloom. 18 to 24 inch, \$1.00 each; 3 for \$2.75.

DEUTZIA LEMOINE. Dwarf habit of growing. Literally covered with snow-white flowers. 18 to 24 inch, \$1.25 each; 3 for \$3.45.

FORSYTHIA — GOLDEN BELL

FORSYTHIA INTERMEDIA SPECTABILIS Hardest of all Forsythias. Known as showy Border Forsythia. The mass profuse bloomer of all Forsythias, bush being covered with bright golden yellow flowers from base to tip of branches. Erect grower, its long branches drooping slightly. 2 to 3 foot bushes, \$1.25 each; 3 for \$3.45.

FORTUNE'S GOLDEN BELL (Forsythia Fortune). Flowers bright yellow and appear before the leaves very early in the spring. 2 to 3 foot bushes, \$1.25 each; 3 for \$3.45.

NEW! FORSYTHIA "SPRING GLORY" A spectacular new Forsythia which bears masses of much larger blooms than older varieties. Brilliant large yellow florets completely cover the branches. Canes grow erect with graceful drooping tips. Very hardy. Strong blooming size plants. 2 to 3 ft. plants, \$1.40 each; 18 to 24 inch, \$1.20 each.

NEW! FORSYTHIA "LYNWOOD GOLD" Just introduced. Lynwood Gold typifies its name by its deep golden flowers, borne in profusion. The individual flowers are large, attractive foliage, upright to drooping growth habits. You will like this new Forsythia. 18 to 24 inch plants, \$1.45 each.

PEARL BUSH (Exochorda Grandiflora). One of our grandest early white flowering shrubs. Blossoms and leaf buds breaking forth at the same time the bush is completely covered with waxy-white flowers resembling Mock Orange. Plant is very hardy. Blooming at same time as Forsythia its snowy white flowers make a contrast combination. 18 to 24 inch, \$1.00 each; \$3.45 for 3; 2 to 3 ft., \$1.25 each.

HYBRID FRENCH LILACS

Beauty, Color and Fragrance combined in our favorite shrub.

CHARLES JOLLY. Double, reddish purple. A heavy bloomer and thrifty growing type. 18 to 24 inch, \$1.60 each; 3 for \$1.50.

LUCIE BALTET. One of the better single reddish-pink types outstanding for richness of color. 18 to 24 inch, \$1.60 each; 3 for \$1.50.

PRESIDENT GREY. Double bluish lilac which has made it very popular. Very fragrant. 18 to 24 inch, \$1.60 each; 3 for \$1.50.

LUDWIG SPAETH. Very hardy, thrifty and heavy blooming type. Plants medium size. Flowers single, dark purple. Very beautiful and fragrant. 18 to 24 inch, \$1.60 each; 3 for \$1.50.

MME. LEMOINE. One of the most appreciated white hybrid lilacs. Flowers are double and borne in large panicles, shading to a creamy white. Plant is vigorous and hardy. 18 to 24 inch, \$1.60 each; 3 for \$1.50.

OLD FASHIONED LILACS

LILAC WHITE (S. Vulgaris Alba). Too well known to need description. Its flowers are white and fragrant. Fine 18 to 24 inch, \$1.25 each; 3 for \$3.45.

LILAC, PURPLE (S. Vulgaris). The well-known purple variety; always a standard sort. Fine 2 to 3 feet, \$1.25 each; 3 for \$3.45.

LILAC (Persian). A favorite among the purple lilac, having a rich color and unusually fragrant. 18 to 24 inch, \$1.25 each; 3 for \$3.45.

HYDRANGEAS

Varied Colors and Types in This Desirable Shrub

OAK LEAF HYDRANGEA. Best of the newer types of Hydrangeas. Upright to drooping in growth, attractive foliage. Compact, large panicles similar to Hydrangea P. G. which remain on plant until September. Flowers changing in color. 18 to 24 inch plants, \$1.25 each; 3 for \$3.45.

HYDRANGEA ARBORESCENS STERILIS (Hills of Snow). Handsome foliage and snow white ball-shaped clusters of flowers. Blooms the greater part of the summer. 18 to 24 inch, \$1.25 each; 3 for \$3.45.

HYDRANGEA (Paniculata Grandiflora). Flowers borne in huge panicles; light pink; changing to brown later in the fall; blooms in August and September. 18 to 24 inch, \$1.25 each; \$3.45 for 3.

THE GLORIOUS SPIREAS

Among the best early bloomers for specimen, clumps or hedge planting. Needs little attention. Has no enemies to destroy blooms or foliage.

SPIREA ANTHONY WATERER. Very popular low-growing bush, blooms all summer. Flowers deep rose color. 12 to 18 inch, \$1.00 each; 3 for \$2.70.

SPIREA VAN HOUTTE (S. Van Houttei). This is the most popular of all the Spiraeas. Its gracefully arching branches heaped as they are with the white blossoms in spring. 18 to 24 inch, 50c each; \$4.50 for 10; \$10.00 for 100; 2 to 3 feet, 70c each; \$2.00 for 3.

NEW IMPROVED EVERBLOOMING SPIREA BILLIARDI. A new bright pink strain. Blooms a profusion of handsome spikes, which are most attractive and well adapted for cutting. Blooms entire season. 18 to 24 inch, \$1.00 each; 3 for \$2.75; 2 to 3 feet, \$1.25 each; 3 for \$3.45.

OLDTIME SWEET SHRUB

Time has done nothing to dim the popularity of this grand old fashioned shrub found in every section.

SWEET SCENTED SHRUB OR CALYCANTHUS. The foliage is rich and flowers of a rich chocolate color, having delightful odor. The old fashioned shrub bush that used to be in every yard. 2 to 3 feet, \$1.25 each; \$3.45 for 3.

MOCK ORANGE

No shrubbery planting complete without several plants of these dainty blooming types.

PHILADELPHUS, Virginalis (New). The finest of the new Mock Oranges. Very large, white, fragrant flowers. Blooms throughout the summer. 2 to 3 feet, \$1.30 each; \$2.85 for 3.

GOLDEN MOCK ORANGE. A favorite of the Philadelphia group. Hardy, medium size bushes covered with bright yellow leaves all summer. Flowers are double and fragrant coming out about the same time as other Mock Orange. 18 to 24 inch, \$1.65 each; 3 for \$4.50.

PHILADELPHUS, Coronarius (Mock Orange). Pure white, very fragrant flowers; one of the first to bloom. 2 to 3 feet, \$1.25 each; \$3.45 for 3.

BEAUTY BUSH (Kolkwitzia). One of our most graceful flowering shrubs. Long, arching branches covered in early spring with masses of delicate pink, tubular flowers; attractive foliage and used widely in general shrub plantings. 18 to 24 inch plants \$1.35 each.

The SNOWBALL Viburnum

GARDENIA SCENTED SNOWBALL

(Viburnum Burkwoodii)

Here is an improved Viburnum Carlesii as fragrant as Carlesii, but blooms one to two weeks earlier. Flower heads up to four inches wide and 100 to 150 individual flowers. Semi-evergreen. Growing 5 to 6 feet high. 15 to 18 inch heavy, \$1.75 each; 18 to 24 inch, \$2.25 each.

SNOWBALL COMMON. The old-fashioned Snowball; pure white flowers are produced in May and June. Fine 2 to 3 ft, \$1.50 each; \$4.25 for 3; 18 - 24 inch, \$1.25 each; 3 for \$3.45.

EUROPEAN CRANBERRY BUSH. Handsome green foliage; large bunches of crimson berries. The flowers are pure white. 2 to 3 foot, \$1.25 each; \$3.25 for 3.

HYPERICUM — HIDCOTE. A compact, twiggy shrub, covered throughout the summer with bright yellow flowers. Does well most anywhere and if tops should freeze back a little it will spring up again from the base and produce masses of flowers that summer. Medium size grower. 18 to 24 inch plants, \$1.45 each.

WEIGELA EVA KATHE. Flowers a brilliant crimson; a beautiful clear, distinct shade. 18 to 24 inch bush, \$1.00 each; \$2.70 for 3.

WEIGELA ROSEA. An elegant variety with fine rose colored flowers appearing in June. 18 to 24 inch bush, \$1.00 each; \$2.70 for 3.

WEIGELA VAN HOUTTEI. A selected form of the Rosea, having deep rosy red blossoms borne in great profusion. Weeping and graceful. A very beautiful type Weigela. 18 to 24 inch, \$1.00 each; \$2.70 for 3.

WEIGELA LUTEA (New). An outstanding new form of the famous and lovely Weigela family attaining a height of 6 to 8 feet. The foliage of this variety is variegated, the leaves being a bright green with yellow and green splotches over the entire surface. The flowers are rose pink to deep pink which are borne in profusion during late May and early June. 18 to 24 inch, \$1.00 each; 3 for \$2.70.

"THE RARE FRANKLINIA"

Beautiful blooms and blazing fall foliage bring beauty to any planting. Flowers start opening in Mid-August and continue to open until hard frosts. The young leaves are 5 to 6 inches long by about one-third as wide, a rich dark green with red veining. In Autumn the whole tree blazes a rich warm color. Produces a beautiful effect in any ornamental planting. 12 to 18 inch, \$1.75 each; 18 to 24 inch, \$2.75 each; 2 to 3 feet, \$3.25 each.

FRANKLINIA

Desirable Flowering and Ornamental TREES AND SHRUBS

That Lead the Beauty Parade of Spring Blooms

THE BEAUTY TREE OF AMERICA

Oriental Flowering Cherries

KWANZAN. Large double pink blossoms borne in profusion. Tree vigorous and upright in growth.

MT. FUJI. The very best white flowering cherry. We have never seen such clusters of snow-white double blossoms as this tree bears in the spring. Tree upright in growth but droops naturally when in bloom.

Prices upright Tree Form, Double Flowering Cherry (blooming size trees) 3 to 4 ft., \$2.95 each; 4 to 5 ft. \$3.95 each.

WEeping DOUBLE FLOWERING CHERRY

Grace and Beauty unequalled in our Large Blossom type

Flowers are large, double brilliant pink, borne in clusters with stems about 1 inch long. Blossoms later than the Single Flowering type and about the same time as other double flowering cherry. Being partly in leaf when blossoms appear. A grand sight to behold when in full bloom. Well developed heads on 5 to 6 ft. stems, \$7.50 each.

THE BEAUTIFUL MAGNOLIAS

Nature gives us nothing finer in tree blossoms.

MAGNOLIA STELLATA (The Starry Magnolia). A distinct and charming slow growing magnolia. Blossoms before foliage appears. Flowers pure white, semi-double and fragrant. A profuse bloomer and very attractive. 2-3 ft. plants, \$3.95 each; 18 to 24 in., \$2.85 each.

MAGNOLIA SOULANGEANA and **MAGNOLIA NIGRA**, the best known of the deciduous Magnolias. Perfectly hardy and very beautiful plants when in bloom. Blossoms are large, purplish-pink and white and usually appear just before the leaves come out. The Nigra type flowers are dark purple on outside. 18 to 24 inch, \$2.95 each; 24 to 30 inch, \$3.95 each; 30 to 36 inch, \$4.95 each; 3 to 4 ft. \$5.95 each.

MAGNOLIA GRANDIFLORA. The great evergreen, large flowering Magnolia of the South and Central areas. The most beautiful of all evergreen trees; its immense saucer-like, white shading to cream and very fragrant flowers present a striking appearance contrasted with the large glossy green leaves. Not hardy north of southern New York. 18 to 24 inch, \$4.50 each, 2 to 3 feet, \$5.95 each.

BLOOD LEAF MAPLE

THE ARISTOCRAT OF ALL MAPLES

We offer this scarce item this year in selected type grafted stock. A rare and beautiful dwarf tree with rich purplish red leaves which adds the correct touch to many landscape effects. 15 to 18" only, \$4.75 each.

THE GORGEOUS FLOWERING DOGWOODS

A Favorite Wherever Grown and Grows Most Everywhere

DOGWOOD (Pink Flowering). A colored form of the native species Dogwood. Same habits of growth, period of bloom and general behavior: bright deep rose-colored blossoms. 18 to 24 inch, \$2.75 each; \$7.50 for 3; 2 to 3 ft. \$3.50 each; \$9.75 for 3; 3 to 4 ft. \$4.50 each.

DOGWOOD, WHITE FLOWERING. Large white flowers appear in the spring before the leaves. Scarlet fruits are borne in the autumn and the leaves turn to a deep red. 3 to 4 ft. \$1.95 each; \$5.00 for 3; 4 to 5 ft. \$2.75 each; \$6.95 for 3.

OUR FINEST HAWTHORN

PAUL'S SCARLET HAWTHORN. The grandest and most floriferous of all the Hawthornes. The rich brilliant double scarlet flowers present a striking appearance during the early spring. These combined with the healthy, vigorous habits of the tree, being very hardy, make it a general favorite. 4 to 5 ft. trees, well branched, \$3.65 each; 3 for \$9.95.

DOUBLE RED FLOWERING PEACH

Most Hardy, Profuse Blooming Type, most desirable for home use. Flowers are very double, almost like a small rose and present a striking appearance. Hardy anywhere peaches can be grown. Available in double red only. 2 to 3 ft. \$1.25; 3 for \$3.45; 3 to 4 ft., \$1.50; 3 for \$4.00.

THE BEAUTIFUL HOPA CRAB

Exquisite rosy pink blossoms cover the entire tree—no other tree can equal the profusion of bloom of the wonderful HOPA. A beautiful tree from bloom to frost with red-tinged, dark green leaves and small red, rosy apples that cover the tree. Fruits can be used for jelly if desired. Tree spreads to about 15 ft.; 3 to 4 ft. and 2 to 3 ft. trees only.

NORMANDI—Outstanding Ornamental Tree

A beautiful pink flowering crab which blooms in profusion in the spring. Has a nice foliage throughout the summer and large red fruits, covered for culinary purposes as well as ornamentation. Trees in 2 to 3 and 3 to 4 ft. only.

BECHTEL'S DOUBLE FLOWERING CRAB. One of the most beautiful of the flowering crabs; tree medium size, covered in early spring with large, double, fragrant flowers of a delicate pink color.

ALMEY "SENSATIONAL" NEW FLOWERING CRAB. The tree upright, vigorous and hardy. Blossoms second year. Flowers open from deep carmine buds, are large, star pointed and fiery crimson. One of the best new sorts.

THE GORGEOUS HOLLY

Truly plants of distinction.

Ilex Cornuta Burfordi and **Ilex Cornuta**: Glossy bright green foliage and heavy berry producing types of dwarfish habits so they may be used in most all foundation plantings or as smaller growing specimen trees. Perfectly hardy in southern and central areas except in higher elevations where temperatures get below zero in winter months. Burfordi type usually has but one spine whereas the Cornuta type has about five spines. These are considered among the "Showiest" of "Hollies". State type wanted. 12 to 18 inch plants, \$2.95 each; 18 to 24 inch \$3.95 each.

JUDAS TREE OR RED BUD. A medium sized tree with large, irregular leaves and perfect heart-shaped leaves. The profusion of delicate reddish-pink blossoms with which it is covered in early spring before the foliage appear makes it one of the finest ornamental trees. 3 to 4 ft., \$1.95 each; \$5.50 for 3.

PYRACANTHA LALANDI (FIRETHORN)

The most hardy firethorn. Upright grower, white flowers; large, orange colored berries from mid-summer 'til late winter. Prune annually for increased berry production. 2 to 3 foot, \$3.45 each; 18-24 inch, \$2.65 each; 12-18 inch, \$1.65 each.

PYRACANTHA, RED BERRIED. There are many types of the Red Berried Pyracantha being offered and we have selected the most hardy type we have observed, coming thru under zero temperatures. The red berried type is more spreading than the Lalandi. The clusters of large bright red berries contrasted with glossy, evergreen foliage surely presents a striking appearance. A beautiful combination when planted with Lalandi type. 12 to 18 in. \$1.95 each.

OUR FLOWERING CRAB

ELEVI PURPLE LEAF CRAB

An outstanding new type among the flowering crab varieties. Tree is covered in the spring with a mass of wine-red blossoms. Bronze foliage turns to bright red in the fall. Attractive red fruits persist into the winter making a beautiful red jelly if desired. About 10 to 12 ft. tall at maturity and an ideal ornamental specimen. 3 to 4 ft. trees, 2 to 3 ft. trees only.

DOLGA CRAB

Add to the beauty of your home planting with this outstanding crab. The flowers are pink and are borne in profusion in the spring. The tree is semi-dwarf and gives a fine appearance throughout the year. The fruits which are borne in profusion are of the best for culinary purposes. Try this outstanding new type this year.

CHINESE ELM

CHINESE HAZEL TREE

Its New-Its A Shade Tree
Its A Nut Tree

Chinese Hazel Tree

A Grand New Ornamental
Nut Bearing Tree
FROM CHINA

We offer this new type shade tree. It is hardy, rapid growing, upright spreading in type with large, broad deep green foliage which remains green until late in the fall. One of the most attractive and desirable shade trees we have offered in many years. Produces edible nut. Trees reach height of 60 or more feet. 2 to 3 ft., \$1.95 each; 3 to 4 ft., \$2.35 each; 4 to 5 ft., \$2.95 each; 5 to 6 ft., \$3.95 each.

CUSHION MUMS

THE MOST BEAUTIFUL
BORDER AND BEDDING
PLANT INTRODUCED IN
RECENT YEARS

Covered with hundreds of 'Miniature Mums' from July until heavy frosts. A perennial that should be in every garden and about every home. Gorgeous for dainty Bouquets. We have White, Pink, Bronze, and Yellow Colors. State which color wanted. Strong, well rooted, single plants, 30c each; \$2.50 for 10. Heavy well branched clump plants, 2 yr., \$1.45 each; \$13.50 for 10.

Shade Trees

We give special prices for street and park plantings using twenty or more trees. Write to us, giving quantities and grades desired. All 6-8 and 8-10 ft. are well branched.

SWEET GUM. Sometimes called the Star tree. A beautiful symmetrically shaped tree. The corky-ridged bark of the branches and large limbs, present an unique appearance. Leaves are bright green changing to a pleasing tone of crimson in the autumn. 2 to 3 ft., \$1.50 each; 3 to 4 ft., \$3.00 each; 4 to 5 ft., \$4.00 each; 5 to 6 ft., \$5.00 each.

CHINESE ELM. Tree upright, extreme end of branches drooping. Very dense, making good shade. Fast growing and resistant to drought and cold. 5 to 6 feet, \$2.75 each; 6 to 8 feet, \$3.75 each; 8 to 10 feet, \$4.75 each.

BIRCH WHITE (European). Erect growing. Branches slightly drooping and attractive bark which is almost white. 6 to 8 feet, \$3.75 each; \$10.50 for 3; 4 to 6 feet, \$2.25 each; \$6.00 for 3.

WHITE BIRCH CLUMPS (European). Same as regular White Birch except grown in clumps of 3 or more stems from a main stem at ground level. Produces very beautiful effect and very desirable for screen planting. 4 to 5 feet, 3 or more stems, \$3.95 each; 3 to 4 ft., \$2.95 each.

MAPLE NORWAY (A. Platanoides). A large, handsome tree with broad, deep green foliage; has a very compact growth. A valuable tree for parks, lawns or streets. 6 to 8 feet, \$5.50 each; 8 to 10 feet, \$6.50 each.

MAPLE, SILVER-LEAVED or SOFT (A. dasycarpum). A rapid growing tree of large size, irregular rounded form. Foliage bright green above and silver beneath; a favorite street and park tree. 6 to 8 feet, \$3.75 each; 8 to 10 ft., \$4.75 each.

SCHWEDLER'S PURPLE LEAVED MAPLE. Probably our best, large growing purple leaved tree. Of the sugar maple type. 5 to 6 feet, \$5.00 each; 4 to 5 ft., \$4.25 each.

ORIENTAL PLANE. A rapid growing erect tree with bright green foliage; much more esteemed than the American variety as a shade tree, very desirable for parks, streets and lawns. 6 to 8 feet, \$5.50 each; 8 to 10 feet, \$6.50 each.

POPLAR, LOMBARDY. Grows to an immense height. Used for roadside planting or to break the monotony of low, round-top trees. Also beautiful as a screen or windbreak. 6 to 8 feet, \$1.95 each.

POPLAR, BOLLEANA. Beautiful tree that resembles the Lombardy Poplar in shape but is hardier and longer lived. Has deeply lobed leaves with white facing. 6 to 8 ft., branched, \$3.65 each.

WEEPING ORNAMENTAL TREES

WEEPING WILLOW, WISCONSIN. The well known common weeping willow; makes a large tree covered with drooping branches. 6 to 8 feet, \$3.75 each; \$9.25 for 3.

WEEPING WILLOW, NIOBE. A graceful weeping tree with golden yellow bark, narrow green leaves, silvery beneath, and long drooping branches. 5 to 6 ft., \$3.00 each.

CUT LEAF WEEPING WHITE BIRCH. One of the most beautiful weeping trees now offered. Pyramidal in growth habit. Dark green leaves and shiny white bark as tree matures. 6 to 8 foot trees, \$4.95 each; \$14.25 for 3.

Small Size Shade Trees

These well rooted straight trees, mostly whips with few branches will grow and develop rapidly into fine shade trees.

WISCONSIN WEEPING WILLOW. The well known common weeping willow, grown in all sections. 3-4 feet, \$1.00 each; 3 for \$2.75; 6 for \$5.50.

LOMBARDY POPLAR. Ideal for screen and windbreak planting. The old favorite. 4-5 feet, light, 75c each; 3 for \$1.95.

NORWAY MAPLE. Our most widely planted lawn and street shade tree, forming dense round tip. 4 to 5 ft., \$1.75 each; 3 for \$4.75; 5 to 6 ft., \$2.75 each; 3 for \$7.50.

CHINESE ELM. A hardy, rapid growing, very popular type of the elm of recent introduction, proving the most satisfactory of all rapid growing trees. 4-5 feet, \$1.00 each; 3 for \$2.70; 10 for \$9.00; 3-4 feet light, 75c each; 10 for \$5.00; 50 for \$22.50.

SILVER LEAVED MAPLE. The old standby in rapid growing shade trees in many sections. 3 to 4 ft., light, 75c each; 5 for \$3.25; 10 for \$5.50.

CRIMSON KING MAPLE

(Plant Patent No. 735)

The real red maple you have been waiting for. A beautiful form of Schwedler Maple with intense red foliage throughout the growing season. Originated in Europe, and has been under observation in all parts of the U. S. for more than ten years. Grows to a large tree, it is perfectly hardy and can be grown in most any location. "It is a tree of beauty." SEE OUTSIDE BACK COVER FOR COLOR ILLUSTRATION. 4 to 5 ft. \$1.95 each; 5 to 6 ft., \$3.95 each; 6 to 7 ft. \$6.95 each.

MORaine LOCUST

(Plant Pat. No. 836)

We bring to our patrons another fine shade tree. The Moraine Locust is an improved variation of the Honey Locust with a round head when young but tall and vase shaped when older, attaining a height of about 30 feet. A stately specimen tree of tidy habits. The dark green, lacy foliage leaves some sunlight filter through and grasses do well under the tree. A new, fast growing, disease resistant shade tree you can enjoy wherever planted. 5 to 6 feet, branched \$6.00 each; 6 to 7 ft., branched \$7.50 each; 7 to 8 ft. branched \$9.00 each.

Our Hardy Evergreens Are Selected To Give You The Best Types For Foundation or General Landscaping. All Plants Listed in This Group Shipped With Ball of Earth Unless Otherwise Desired To Save On Shipping Expense.

ARBORVITAE (American). Very hardy, grows rapidly, forms a beautiful hedge, very dense, 18 to 24 inch, \$3.00 each; 2 to 3 foot, \$4.50 each; 3 to 4 ft. \$5.50 each; 4 to 5 ft., \$6.50 each.

ARBORVITAE (Pyramidalis). A superb hardy sort, very compact habit and grows in a perfect column. 18 to 24 inch, \$3.50 each; 24 to 30 inch, \$4.25 each; 30 to 36 inch, \$4.90 each; 36 to 42 inch, \$5.75 each.

ARBORVITAE GLOBE. A perfect globe when well grown, the spread usually equalling the height. Foliage of light green. 12 to 15 inch, \$2.75 each; 15 to 18 inch, \$3.85 each; 18 to 24 inch, \$4.75 each.

ARBORVITAE BERCKMAN'S GOLDEN. Beautiful compact form, very dense and compact. A dwarf type with golden foliage. 12 to 15 inch, \$2.25 each; 15 to 18 inch, \$3.75 each; 9 to 12 inch, \$2.35 each.

THUJA OCCIDENTALIS NIGRA. Very dark green and compact type of the American Arborvitae becoming more and more popular. Can be used in place of Pyramidal forms of evergreens where more body is desired. 12 to 18 inch, \$2.50 each; 18 to 24 inch, \$3.50 each; 2 to 3 ft., \$4.75 each.

THUJA OCCIDENTALIS ELEGANTISSIMA Golden tipped Pyramidal type of Arborvitae which grows compact and very erect. Very hardy and one of the better types, holding its color well. 30 to 36 inch, \$4.25 each; 3 to 4 ft., \$5.50 each.

SPINY GREEK JUNIPER. An unusually attractive dwarf pyramidal form with very compact bluish-green foliage. 12 to 15 inch, \$3.25 each; 15 to 18 inch, \$3.75 each.

IRISH JUNIPER. Very erect, forming a column of deep green foliage. 18 to 24 inch, \$3.25 each; 24 to 30 inch, \$4.00 each; 30 to 36 inch, \$4.50 each.

We Can Supply Many Other Types and Sizes for Nearby Planting. Prices Can Be Given at Nursery.

Small Low-Priced Evergreens

Our Finest Type Evergreens in Small Size Transplanted Heavy Rooted Plants. All Shipped Bare Rooted, Packed in Moss, by Express and Parcel Post.

Beautify Your Home and Grounds With These Low Priced Evergreens. They Are Strong, Vigorous Growers Which Will Give You Pleasure As They Grow to Maturity.

GLOBE ARBORVITAE. A perfect globe type evergreen, the spreading usually equalling the height. 8 to 10 inch, \$1.00 each; 3 for \$2.75.

PYRAMIDAL ARBORVITAE. A very hardy compact evergreen, grows natural in perfect pyramidal shape. 10 to 12 inch size, \$1.00 each; 3 for \$2.75.

AMERICA ARBORVITAE. Has graceful habits, beautiful foliage. Suitable for foundation hedge and windbreak planting. 15 to 18 inch size, \$1.00 each; 3 for \$2.75.

BERCKMAN'S GOLDEN ARBORVITAE. The favorite of all dwarf golden, compact evergreens. 8 to 10 inch, \$1.00 each; 3 for \$2.75.

PFITZER JUNIPER. A general favorite wherever planted as a low spreading type plant. Good color, bluish-green. 6 to 12 inch, \$1.00 each; 3 for \$2.50.

PFITZER JUNIPER GLAUCOA HETZLI. Favorite of all spreading Junipers. Very hardy, beautiful silvery blue-green foliage. 10 to 15 inch plants, \$1.00 each; 3 for \$2.75.

PFITZERIANA JUNIPER. Very hardy, valuable spreading variety with silvery color. 18 to 24 inch, \$4.75 each; 24 to 30 inch, \$5.50 each.

JUNIPER GLAUCOA HETZLI. A spreading type evergreen, decidedly blue, rapid in growth, stands shearing well, closely resembles the Pfitzeriana in appearance and growth habits. 18 to 24 inch, compact plants, \$4.50 each; 24 to 30 inch, \$5.75 each.

TAXUS MEDIA BROWN. One of the best forms of the Media Type Yew. Grows very dense and conical in outline; beautiful dark green foliage. Hardy, 12 to 15 inch, \$3.50 each; 15 to 18 inch, \$4.75 each; 18 to 24 inch, \$5.75 each; 24 to 30 inch, \$6.75 each.

TAXUS CUSPIDATA (Japanese Yew). One of the hardiest of Yews. Bushy, upright, spreading nature, with rich green foliage well suited for foundation planting. Price 12 to 18 inch, \$4.75 each; 18 to 24 inch, \$5.75 each; 24 to 30 inch, \$6.75 each.

TAXUS MEDIA HICKSI. A distinct columnar form with upright branches with radially spread leaves. Not as compact as the Irish Yew. 18 to 24 inch, \$3.50 each; 24 to 30 inch, \$6.00 each; 12 to 18 in., \$3.95 each.

DOUGLAS FIR. One of our finest fir type trees adapted to wide areas and especially beautiful as a specimen tree. Must have good drainage. Long blue-green foliage, dense and very hardy. 18 to 24 in. plants, \$3.75 each; 24 to 30 inch plants, \$4.65 each; 30 to 36 inch plants, \$5.50 each.

WHITE SPRUCE (Picea Canadensis). A very compact growing form of spruce. Blue-green foliage, relative short needles, grows to fine specimen tree. Graceful growth habits and very desirable. 12 to 18 inch, \$2.75 each; 18 to 24 inch, \$3.75 each; 24 to 30 inch, \$4.65 each.

We Can Supply Many Other Types and Sizes for Nearby Planting. Prices Can Be Given at Nursery.

TAXUS CUSPIDATA JAPANESE YEW. The well known spreading type, hardy Japanese Yew. Withstands shade or full sunshine. 8 to 12 inch size, \$1.00 each; 3 for \$2.75.

TAXUS MEDIA HICKSI. A distinct columnar form with upright branches with radially spread leaves. Not as compact as the Irish Yew, but somewhat harder. 10 to 12 inch, \$1.00 each; 3 for \$2.75.

TAXUS MEDIA BROWN. One of the best forms of the Media Type Yew. Grows very dense and conical in outline. 8 to 10 inch, \$1.00 each; 3 for \$2.75.

TAXUS CUSPIDATA NANA FEMINA. A heavy berry bearing type of the dwarf Yew, with good foliage and good bearing habits. 8 to 10 inch, \$1.00 each; 3 for \$2.75.

TAXUS MEDIA ANDERSONI. A wide vase-shaped form of the Media Type Yew. Hardy with excellent foliage and suitable for specimen plantings or where high class hedge is desired. It is considered one of the best. 8 to 10 inch, \$1.00 each; 3 for \$2.75.

Help your state to keep America Green — Help plant America by planting your property, by so doing you add to the natural beauty of city, town and country.

Broad-Leaved Evergreens

ABELIA OR BUSH ARBUTUS

Grandest Of All Flowering Evergreens

ABELIA GRANDIFLORA. Foliage dark green, glossy, its arching branches have a distinct shade of red. From May until frost this plant is covered with pinkish-white bell-shaped flowers. 12 to 18 inch, \$1.25 each; \$1.00 for 10; 18 to 24 inch, \$1.95 each; \$17.50 for 10; 2 to 3 feet, \$2.50 each; \$22.50 for 10.

EVERGREENS (Wax Leaved) PRIVET

LIGSTRUM LUCIDUM. Medium to dwarf grower. Large dark green, glossy foliage which varies little winter or summer. White flowers followed by blue berries which hang on until spring. Prices 18 to 24 inch, \$2.25 each; 12 to 18 inch, \$1.75 each.

NANDINA DOMESTICA. (Heavenly Bamboo). One of our finest Berried Evergreen plants. A very showy shrub of great height with large clusters of succulent berries in the autumn. Its dark green foliage assumes a gorgeous orange red or crimson color in winter. Thrives well in any well-drained loamy soil and is very hardy. One of the plants which is used in all the better class of landscape work. 18 to 24 inch, \$3.25 each; 12 to 18 inch, \$1.75 each.

HOLLY. (*Ilex Crenata Convexi*). A slow growing form of the box leaved Japanese Holly, with glossy box-like leaves. A compact growing, attractive plant used widely for rock gardens and borders where rigid dense holly type plants are desired. 12 to 15 inch, \$2.95 each; 15 to 18 in., \$3.45 each.

SEE PAGE 52 FOR OTHER HOLLY TYPES

AZALEAS

Azaleas are among the most showy of all garden flowers. They are easy to grow — extremely floriferous. The colors are in many exquisite shades from Crimson Red thru Pale Pink. No foundation planting is complete without them.

AMOENA. A dense, dwarf growing evergreen shrub, semi-double flowers of bright cheerful rosy-purple, produced in great numbers. 12 to 15 inch, \$3.95 each; 10 to 12 inch, \$3.25 each.

HINODEGIRI. Is a broad, spreading habit; with beautiful evergreen foliage and many fiery-red, single flowers. Bushy plants. 10 to 12 inch, \$3.25 each; 12 to 15 inch, \$4.00 each; 8 to 10 inch, \$2.55 each.

HINO-CRIMSON. Brilliant red flowers borne in great profusion, blend to coppery red and present a stunning appearance. An early bloomer with glossy evergreen foliage. One of the best Kurumes. Bushy, blooming size plants. 10 to 12 inch, \$3.25 each; 12 to 15 inch, \$3.95.

SWEET BRIAR. One of the newer Kurumes, and one of the hardiest. A thrifty grower and profuse bloomer of large, rose-pink attractive flowers. Presents a beautiful contrast to the Flame and Hinodegiri and much admired by azalea critics. Evergreen foliage. 10 to 12 inch, \$3.25 each; 12 to 15 inch, \$3.95 each; 8 to 10 inch, \$2.65 each.

CHRISTMAS CHEER. The blooms are bright red and the plant blooms in profusion making this one of the most popular reds offered. 8 to 10 inch, \$2.65 each; 10 to 12 inch, \$3.40 each.

FLAME. Brilliant red flowers borne in great profusion, blend to coppery red and present a stunning appearance. An early bloomer with glossy evergreen foliage. One of the best Kurumes. Bushy blooming size plants. 10 to 12 inch, \$3.35; 12 to 15 inch, \$3.95 each.

CORAL BELLS. Grows to height of three feet and is very showy. A brilliant coral pink against the evergreen foliage in May increases the popularity of this plant for a Mother's Day Azalea. 10 to 12 inch, \$3.25 each; 12 to 15 inch, \$4.25 each.

PINK PEARL. Produces great quantities of beautiful salmon-rose colored large flowers which are tinted lighter in the center of the blooms. Very showy and attractive but not too hardy in northern sections. 8 to 10 inch, \$2.65 each; 10 to 12 inch, \$3.25 each; 12 to 15 inch, \$4.00 each.

INDICA ALBA. Very hardy, upright grower, leaves dull, hairy, attractive. Flowers pure white. Blooms Mid-season. 12 to 18 inch, \$4.35 each; 10 to 12 inch, \$3.35 each.

MAY GLORY. One of our finest late blooming, deep pink, with almost red throat markings. A free grower and very showy. 10 to 12 in., \$2.95 each; 12 to 15 in., \$3.75 each.

7 feet apart each way.....	888	15 feet apart each way.....	193	35 feet apart each way.....	38
8 feet apart each way.....	680	16 feet apart each way.....	170	40 feet apart each way.....	27

How to Order From Bountiful Ridge Nurseries

All prices in this catalog are net F.O.B. Princess Anne, Md. No discount allowed. Delivered prices will be given on any stock wanted if you write giving size and number of trees wanted. The prices quoted herein are for shipping season of Fall 1956 and Spring 1957. However, all prices as listed in this catalogue will be effective until our new catalogue or price list is printed for Fall 1957, Spring 1958.

PLEASE NOTE — Any Sales Tax which may be imposed on nursery stock by State or Federal authority should be added to the amount for your order. You will be advised of any changes or additions which may be made when orders are acknowledged.

OUR SHIPPING SEASON

We pack and ship all through the winter to Southern States. Our regular shipping and packing season usually opens here about the 15th of October and continues until May 10. Our fall shipping season opens about October 15 and continues until the end of the season.

OUR TERMS

Our terms are cash except in large orders when satisfactory reference is given; then one-third the amount of the order must be sent and the balance on arrival of trees at depot. On early orders one-third the amount can be sent in and balance a few days before shipment. Prices in this Catalog are for FALL 1956 and SPRING 1957.

HOW TO REMIT

Remittance should be made either by Post Office Money Order, Registered Letter, or by Check on your Bank.

ORDER EARLY

We earnestly request our patrons to send their orders in early and specify when they wish them shipped. We pride ourselves on making prompt delivery but sometimes in our rush season we cannot get the orders shipped on the exact time, and must ask our customer's indulgence for a week or so and shipment will be made as promptly as possible. If time of shipment is left to us we can assure our customer of receiving stock in perfect condition and in proper planting season.

MISTAKES

We use every precaution that is humanly possible to avoid mistakes and believe that we are as near free from them as any Nurseryman in the United States; but in the event any of our stock should prove untrue to name under which it is labeled or sold, it will be our option to replace original order as ordered or refund the amount paid for stock ordered upon proper proof that such stock shipped was not true to name. Further than this we are not responsible.

SPECIAL NOTICES

All quotations, acceptances of orders and promises of shipment are subject to change, limitations or cancellations made necessary by State, Government regulations or other Hazards beyond our control, affecting our operations.

BOUNTIFUL RIDGE NURSERIES

RECEIVING STOCK IN COLD WEATHER

In event it should turn cold after your stock has been shipped to you and there is a possibility that there is frost in the box in which the stock is shipped, put the box in a place where the temperature is above freezing—a cellar or a frost-proof building, and do not disturb for 5 to 7 days, at which time stock can be removed from the box in first-class condition. Under no circumstances should you open a box when you think there is frost in it, it will kill it. But if allowed to thaw out in the box, the stock will not be injured. Be sure and follow this practice.

OUR REFERENCES

As to our responsibility, we refer you to the Salisbury National Bank, Salisbury, Md., Farmers & Merchants Bank, Salisbury, Md., Bank of Somerset, Princess Anne, Md., Dunn & Bradstreet and to any of our thousands of customers throughout the country that you might know or whose name you find in this catalog, and the various State Departments in the Eastern U. S.

CERTIFICATE OF INSPECTION — DUPLICATE OF NUMBER 23

THIS IS TO CERTIFY, That on the 5th day of September, 1956 we examined the Nursery Stock of the Bountiful Ridge Nurseries, growing in their nurseries at Princess Anne, County of Somerset, State of Maryland, in accordance with the laws of Maryland, 1898, Chapter 289, Section 58, and that said nurseries and premises are apparently free, so far as can be determined by inspection from San Jose Scale, Peach Yellow, Pear Blight and other dangerously injurious insect pests and plant diseases.

THIS CERTIFICATE is valid until September 30, 1957, unless sooner revoked, and does not include nursery stock not grown within this State, unless such stock is previously covered by Certificate and accepted by the State Entomologist and State Pathologist.
 ERNEST N. CORY, State Entomologist
 G. S. LANGFORD, Chief Inspector
 L. O. WEAVER, State Pathologist

In addition to the above Certificate every shipment going outside of the infested area of the Japanese Beetle has a certificate of the U. S. Department of Agriculture showing the shipment is free from Japanese Beetle.

Stelemaster

Buy Bountiful Ridge Grown
Virus Free Stelemaster

A really great berry, resistant to all known types of Red Stele root rot, in the Eastern U.S. Production records show yields of 12,000 quarts per acre or more. Well adapted to entire central and northern areas. 1956 further confirms the wide adaptability of Stelemaster and its ability to produce under adverse conditions.
