FLORAL DEPARTMENT

This is an important department in our business, one that has grown to great proportions, and steadily increasing. Our many years of practical experience enables us to produce the most effective arrangements with cut flowers and plants for all occasions. With our improved methods, we ship Cut Flowers and Floral Emblems by express to distant points so as to arrive in perfect condition. When the distance is too great, we have a reliable florist in the vicinity take care of the orders. For this purpose, we have a correspondent in all main cities in the United States and Canada.

Flowers Delivered Anywhere at Any Time

Our membership in the F. T. D. A. (Florists' Telegraph Delivery Association) enables us to do this. There is no better way to remember your friends at a distance than to

Wilt Resistant Strains of Asters

For several years the largest seed growers and the Department of Plant Pathology of the University of Wisconsin have been working on a strain of Asters resistant to the Fusarium wilt disease which has caused so much trouble to Aster growers. The plants may be stricken with the wilt at any stage in their growth, from the seedling to the flowering stage, and as yet no method of control has been discovered. We believe prevention through highly wilt-resistant strains is the method of combating the disease.

The following are wilt-resistant strains and are practically immune to this disease.

Currie's Lawn Grass Seed

Produces a Rich, Thick, Velvety Lawn in SIX WEEKS

... A BEAUTIFUL LAWN AND HOW TO SECURE IT ...

It is universally conceded that nothing contributes so much to the beauty and attractiveness of the Home Grounds, the Park and the Cemetery, as a smooth, uniformly rich-green, well-kept lawn. But to be perfect and a pleasure to walk on this should have a firm yet elastic and carpet-like surface, and the first consideration in laying out or renovating old grounds should be to secure this condition.

CURRIE'S LAWN GRASS MIXTURES are the result of years of study and careful observation, and, if our directions are followed in seeding, they never fail to produce quickly a thrifty growth of fine, velvety, rich green grass, continuous in verdure from early spring to winter, and creating a springy, dense, carpet-like turf and permanently beautiful lawn.

THE QUANTITY OF SEED REQUIRED—There is no fixed rule, but a liberal sowing is always satisfactory, while a light seeding is a waste of time and usually disappointing. A beautiful lawn may be produced in a few weeks, or it may not approach perfection for two or more seasons, according to the quantity of Seed sown. When in a hurry for a fine, close turf, we have frequently sown at the rate of seven, or even eight, bushels of 20 lbs. to the acre, with the most gratifying results, but in general the following quantities will produce satisfactory results: 1 pound to 500 square feet; 5 pounds to 1,500 square feet; 30 pounds to 6,000 square feet; 150 pounds per acre.

In thickening up established lawns slightly smaller quantities, depending on conditions, may perhaps be sufficient, but it is always well to put on enough.

CURRIE'S SPECIAL LAWN GRASS MIXTURE

THOROUGHLY TESTED AND ANALYZED FOR GERMINATION AND PURITY

Composed of Evergreen Grasses, best suited to our American Climate, only the finest and cleanest grades of Seed being used. This splendid mixture is composed of only the finest dwarf-growing evergreen grasses; absolutely free from weed seeds or other impurities.

In comparing the cost of our Special Lawn Grass with other mixtures sent out by the trade, remember that the actual weight per measured bushel of our mixtures is 20 pounds or more, while that of most mixtures is only 14 pounds per bushel. To obtain this exceptionally heavy weight per bushel, we must and do use only the heaviest and best samples of the various grasses which compose our mixture. This is in itself a guarantee against sowing weed seeds, as the heavier the mixture the more thoroughly cleaned have been the component grasses. We do not use any cheap grasses that dies out during the winter and which has to be replaced with a permanent grass seed.

Price per lb., 40c.; 5 lbs., \$1.90; 10 lbs., \$3.75; 20 lbs., \$7.25; 100 lbs., \$32.50.

LAKESIDE GRASS MIXTURE

This mixture is specially prepared for country homes where a close, even velvety turf is not easily secured, owing to the difficulty of watering, etc., so necessary for the maintenance of a perfect lawn. The grasses used are such as endure drought and rough usage to a remarkable degree.

We have made up this mixture in a great measure for the formation of lawns at Lakeside Summer Homes that can only have attention during the summer months, and for this purpose it will be found invaluable.

1 lb., 35c; 5 lbs., \$1.50; 10 lbs., \$2.85; 100 lbs., \$27.50.

CURRIE'S PARK MIXTURE

This is composed of quick growing grasses and is used where a lawn is wanted in a hurry, and should be reseeded with our Special Mixture which is composed of the finest of permanent grasses. 1 lb., 25c; 5 lbs., \$1.15.

Grass Mixture for Shady Places

Lawn Grass Mixture for Shady Places

If wanted by mail, add for postage at zone rates

To maintain a nice growth of grass under trees and in places where the sunlight only reaches part of the day, was long considered almost hopeless. This can now be overcome in a great measure by our mixture, which is composed of dwarf, compact growing grasses that naturally grow in partial shade and will maintain a close, thick turf throughout the entire season. It frequently happens that the ground under trees becomes impoverished by the roots of the trees, making it almost impossible for grass to thrive unless a liberal top dressing of fertilizer is supplied, or when the ground has soured and covered with moss an application of ground lime will be found beneficial before sowing the seed.

½ lb., 25c; 1 lb., 45c; 2½ lbs., \$1.15; 5 lbs., \$2.00; 10 lbs., \$3.90; 20 lbs., \$7.75; 50 lbs., \$19.00; 100 lbs., \$36.00:

GRASS MIXTURE FOR TERRACES—

This mixture is made up of fine dwarf growing grasses, with strong creeping and fibrous roots that form a compact growth of turf, resisting drought and exposure remarkably well, and when established, prevents washing.

1 lb., 50c; 5 lbs., \$2.30; 10 lbs., \$4.50; 20 lbs., \$8.90; 100 lbs., \$41.00.

CURRIE'S FAIRWAY MIXTURE—

Golf courses all over the country are demanding better fairways. We made up this mixture to meet this demand. This makes an excellent turf in a very short time, and is indeed a pleasure to walk over it. This will also make a fine lawn, but does not contain any white clover. Sow at the rate of 150 lbs. to the acre. Price per lb., 40c; 10 lbs., \$3.75.

GOLF COURSE MIXTURE—Forms a close turf that bears hard usage and remains green throughout the season.

Per lb., 40c; 5 lbs., \$1.90; 10 lbs., \$3.50; 20 lbs., \$6.95; 50 lbs., \$17.00; 100 lbs., \$33.00.

GOLF MIXTURE FOR PUTTING GREEN—

A mixture of dwarf, compact growing fine leaved grasses that withstand constant wear.

Per lb., \$1.00; 5 lbs., \$4.75; 10 lbs., \$9.40; 20 lbs., \$18.50; 100 lbs., \$85.00.

WHITE CLOVER—Extra choice re-cleaned seed for lawns.

¾ lb., 40c; 1 lb., 75c; 5 lbs., \$3.50.

KENTUCKY BLUE GRASS—The most valuable and permanent lawn grass. Very slow in getting started and becoming established. Where a quick growth is desired, it is best to use "Currie's Special Lawn Mixture," which has in addition to Kentucky Blue, other excellent lawn grasses that will make a sod the first year, while the Blue Grass is establishing itself. Price, 1 lb., 40c; 5 lbs., \$1.50; 10 lbs., \$2.75.

SELECT LIST OF HAY AND PASTURE GRASS MIXTURES

FOR SPRING AND FALL SOWING

Where a field is to be put down to grass for a number of years, a mixture of grasses that are more permanent than Timothy and Clover should be used, such as will produce good crops of hay and pasture for many years without reseeded.

We prepare mixtures of grasses for a wide range of soils and conditions, and there is hardly any land so poor or climate so unfavorable that we cannot furnish a mixture for it that will yield one or more crops of hay every year. The first cost of seeding with these mixtures is generally more than Timothy and Clover, but the returns fully warrant the extra expense.

Only the best re-cleaned grass seeds are used by us in these mixtures, and if the soil and conditions are described, the proper proportions will be used to produce satisfactory results.

ASTER GIANT CALIFORNIA SUNSHINE MIXED

The color in these new Asters is startlingly beautiful. A dual-tone effect is obtained through the contrasting tints of the disc-like center and the outer or guard petals. Gracefulness of form is a distinguishing characteristic. The full centers of tubular, bifurcate petals surround the center, creating an airy, lace-like effect, which is altogether charming. In color, the flowers may be described as varying shades of Enchantress-pink, Appleblossom, Deep-rose, Blue and Lavender, but the disc, sometimes light yellow, sometimes blue, brings additional variety in tint. A bouquet comprising the complete ensemble of shades, presents delicate gradations of color as well as startling color contrasts which enchant the eye of the beholder. We feel confident this glorious new strain will be acclaimed a distinct acquisition to modern floriculture. Pkt. 25c

SOWING SEED IN THE GARDEN

After frost is out of the ground, it should be dug and broken up to a depth of at least 9 inches, mixing in plant food if necessary. Pulverize the top soil well and sow the seed evenly, covering as directed herein. Keep the soil at as even moisture as possible until the little plants appear. Thin or transplant as necessary to prevent crowding. Water thoroughly every few days instead of a light sprinkling every day and cultivate often to keep down weeds and to retain moisture in soil.

MARIGOLD (*Tagetes*)

The African and French Marigolds are old favorite, free-flowering annuals of easy culture; both are extremely effective. The former have uniformly large yellow or orange-colored flowers, and are well adapted for large beds or mixed borders, the latter are dwarfer in growth, with beautifully striped flowers, and better suited for bedding purposes, or for pot culture; they succeed best in a light soil, with full exposure to the sun.....Pkt. 15c

Unlike the ordinary African Marigold, this new variety produces no single flowers, but practically 100 per cent semi-double. The characteristic Marigold odor, too, is much less pungent than in other sorts.

The annual Phlox is unsurpassed as a bedding plant, being one of the most brilliant and at the same time the easiest and most satisfactory plant for the garden. For massing in beds or borders few plants are as showy, and they are equally serviceable planted in vases and window boxes. The Phlox is a native of Texas, and is commonly known as "Texan Pride." Sweet Peas

Beautiful, Fragrant, Fashionable

HOW TO GROW THEM—Sweet Peas should be planted as early in spring as the ground can be worked. Rich loam with an abundance of well rotted manure is an ideal soil. A trench about 6 inches deep should be made, sowing the seed thinly in the bottom, and cover with an inch of soil, pressing it down firmly. Gradually fill in the trench as the plants grow, and thin out to 2 to 4 inches apart. When too close they make a weak growth with inferior flowers. Brush or wire netting should be placed in the rows as soon as the plants appear above the ground. During dry weather, water thoroughly and stir the surface soil frequently to prevent evaporation. Keep the flowers cut and never allow seed pods to form, as that at once ends the flowering season.

Late fall planting of Sweet Peas is practical, and is best done just before the ground freezes up, sowing the seed about 3 inches deep, covering the rows with manure or leaves after the ground is frozen.

In form, the head is conical. This Danish production is highly praised by all who have grown it. For home use, its fine quality and tenderness will be greatly appreciated. It has no coarse veins and leaves, and also has the quality of some of the best sorts of hardening the head before it has attained its full size. Pkt., 10c; oz., 30c; ¼ lb., \$1.00; 1 lb., \$3.00.

Pkt., 10c; oz., 25c; ¼ lb., 50c; 1 lb., \$1.50.

ARTICHOKE

The Globe Artichoke bears large, round heads with thick, fleshy scales, which are cooked and served like Asparagus. Sow the seed early in March and transplant when warm in rows four feet apart and two feet in the rows. Cut the tops off in winter and protect with a heavy covering of straw or leaves. The first season will only yield a partial crop. The second year, thin the shoots to three of the

best, and these will begin to form heads early in summer.

Another use is to cut back the stems close to the ground early in summer. The young shoots which start up rapidly may be tied close together, filling in between with soil to exclude the air until they are blanched, and these are used in various forms of cookery or as a salad. **LARGE GREEN GLOBE**—Pkt., 10c; oz., 75c.

ASPARAGUS

Asparagus may be grown in almost any soil, and under nearly all conditions, but succeeds best in a rich, sandy friable loam with good under drainage, and yet not too dry. Avoid

planting near trees or tall shrubs, because of the shade and heavy draft on the fertility of the ground. Choose an open space with a southern exposure.

Put the soil into the best possible condition before planting by working in a liberal quantity of well rotted manure, or commercial fertilizer will do where barnyard manure is not available. For family gardens dig a trench 18 inches wide for each row, placing a few inches of manure in the bottom, covering it with two or three inches of soil to prevent the roots coming in contact with the manure before active growth has begun. Set the plants from 15 to 18 inches apart in the rows, and 36 inches between the rows. In field culture, it is best to set the plants three to four feet apart. In planting, the roots should be spread by dividing them in the middle, setting them over little hills of soil placed in the bottom of the trench, thus raising the crown a few inches above extremities of the roots, and at once cover with three or four inches of soil for green, and eight to ten inches for White Asparagus, taking care to press the soil firmly about the roots. The plants may be set either in spring or late in fall. We advise planting in this latitude as early in the spring as the ground can be worked. The Asparagus plant is slow to die down in the fall, so the roots cannot safely be dug until about November 1st. By this time the soil is so cool that the plants do not root readily, consequently many are winter killed.

Frequent cultivation is required to keep down weeds and to provide a mulch of loose earth for the retention of moisture, care being taken not to injure the young sprouts in the operation.

Cutting should not begin until the plants are strong and vigorous, which is generally two or three years after planting, and should be discontinued after the first of July. Later cropping is done at the expense of weakening the roots. The plants should be allowed to fully mature before cutting off early in winter, and a top dressing of three or four inches of barnyard manure applied. Asparagus being a gross feeder, naturally requires heavy fertilizing, and an application of commercial fertilizer early in spring will be beneficial.

Asparagus may be found suffering from blight, a condition frequently brought on by prolonging the cropping season, thereby weakening the roots, or it may be due to a want of fertility. So as to prevent it, apply a liberal quantity of manure every year, and above all avoid extending the cutting period too long. Should blight appear, however, spray the plants freely with Bordeaux Mixture, and destroy the affected parts.

WASHINGTON RUST PROOF—A new variety, the result of breeding by the U. S. Dept. of Agriculture to obtain a rust-proof Asparagus. Is nearer to being rust-proof than any other variety. The shoots are large and deep green in color. Pkt., 10c; oz., 15c; ¼ lb., 35c; 1 lb., \$1.25.

Brussels Sprouts

BRUSSELS SPROUTS

Italian Broccoli

ITALIAN GREEN SPROUTING BROCCOLI

A new and distinct variety of the popular branching type. The plant grows about two feet high, is branching, each branch terminating in a green sprout. When the green sprouts which are actually a mass of flowers have developed to two or three inches across—and before the flowers appear—they are ready for use. This splendid vegetable seems to thrive anywhere. It has the combined flavor of cauliflower and asparagus, and is cooked and served the same as cauliflower.

For an early crop sow the seed in a cold frame and transplant the seedlings in the open ground when danger of frost is past. For a later crop, sow the seed in the open ground in May and the sprouts will be ready for use in August. Pkt., 10c; $\frac{1}{4}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.75.

BROCCOLI (*Winter Cauliflower*)

SWISS CHARD or SPINACH BEET

Swiss Chard is a beet grown for its leaves. The mid-rib when boiled makes delicious greens, or the leaves may be boiled and served as spinach. Sown in the spring, the leaves are soon ready to eat, and will continue to grow all through the summer and fall. If given a little protection, it will survive the winter and make excellent greens early in the spring. One ounce will sow 100 feet of drill.

LARGE WHITE—Grown extensively for the leaves, which are used the same as spinach. Pkt., 05c; oz., 10c; $\frac{1}{4}$ lb., 25c; 1 lb., 75c.

Currie's Rust-Proof Wax Beans

Beans

Wax or Yellow-Podded Varieties

Culture—Begin sowing Dwarf or Bush varieties the first week in May, if the ground is in fit condition. For successive crops sowings may be made every two or three weeks until the 15th of July. Mature in 45 to 65 days. Sow thinly in drills 2 or 3 inches deep and from 18 in. to 2 feet apart. If the soil is rather poor, the former depth will suffice. If rich, the latter. Never cultivate beans while the foliage is wet or covered with dew, because the bean-spot or anthracnose will spread very rapidly if carried on the clothing or hoe, with detrimental effect to the crop. Beans should be picked daily in order to have them tender and stringless. (120 lbs.) to the acre in drills.

drills for the seed about a foot apart. Sow the seed thinly, covering to a depth of 1 inch; when large enough to handle, thin out the plants to about 6 inches apart. The plants pulled up may easily be transplanted elsewhere, avoiding loss. 7 lbs. to the acre in drills.

Carrot

CULTURE—For the successful cultivation of this root the soil should be light (sandy loam is best, enriched the previous year with manure) and deeply tilled. For an early crop the seed should be sown as early as the ground can be properly worked. For later crops it may be sown any time until about the middle of June. Be careful to compress the soil over the seed after sowing. Sow in rows about 15 inches apart, or for field culture $1\frac{1}{2}$ to 2 feet apart, covering the seed about one-half to one inch deep. Keep down weeds. Thin out young plants as soon as they can be handled, leaving them about 4 inches apart. 1 oz. 100 feet of drill; 3 to 4 lbs. per acre in drills.

CURRIE'S IMPROVED MILWAUKEE MARKET

In shape, color and general appearance this sort is an improvement on the well-known Danvers. It is broad at the neck and gradually narrows down to a blunt, pointer base. In color, it is an attractive bright orange. The flesh is tender and sweet throughout, and is entirely free from core. It is one of the heaviest croppers and its handsome appearance makes it an excellent bunching Carrot for market. Pkt., 10c; 1 oz., 20c; $\frac{1}{4}$ lb., 75c; 1 lb., \$2.50.

CHANTENAY IMPROVED

The market gardener's and trucker's favorite. It is an early, very productive, half-long, stump-rooted variety, smooth-skinned, fine in appearance and entirely coreless. The shoulder is unusually thick and the root tapers slightly down towards the blunt point so that it is pulled very easily. The color is a rich orange and the texture and quality are unsurpassed. For table use many regard this variety—because of its form, color, texture and delicate flavor—the finest of all sorts, and it is undoubtedly the best bunching Carrot for early market use. Pkt., 05c; 1 oz., 15c; $\frac{1}{4}$ lb., 35c; 1 lb., \$1.00; 5 lbs., \$4.25.

Cauliflower

Early Snowball Cauliflower

CURRIE'S DANISH MARKET CAULIFLOWER

"DRY WEATHER"—Extra Selected
Comes in about three weeks later than our Selected Early Snowball. Heads larger and firmer.

Our stock of this grand Cauliflower cannot be surpassed. For packers and pickle growers it has no equal, yielding, as it does, immense, solid heads, many of which weigh over ten pounds each of solid flower.

Every plant produces a head, many of them so large that three fill a bushel basket and all perfectly solid. As the name "Dry Weather" implies, this variety possesses to a marked degree the ability to resist without deterioration extremely droughty conditions such as have been experienced during recent seasons. Because of this constitutional hardness many growers, especially those in the drier, hotter sections, pin their faith to this fine sort as against all other varieties. Pkt., 15c; $\frac{1}{4}$ oz., 80c; $\frac{1}{2}$ oz., \$1.45; 1 oz., \$2.25; 2 ozs., \$3.75; $\frac{1}{4}$ lb., \$7.25; 1 lb., \$25.00.

EXTRA EARLY SNOWBALL or DANISH PERFECTION

The leaves, very closely enfolding the head, give it a particularly attractive appearance when displayed for sale, and as the inner leaves almost cover the snow-white flower, the necessity of early tying up as in the case of other early sorts is largely avoided. It is the earliest strain of its type and recommended for extra early marketing. Pkt., 25c; $\frac{1}{4}$ oz., \$1.00; $\frac{1}{2}$ oz., 75c; 1 oz., \$3.00; 2 ozs., \$4.75; $\frac{1}{4}$ lb., \$9.00; 1 lb., \$34.00.

CULTURE—The Seed for early planting should be sown in February or March in a hot-bed, transplanting the plants when large enough into another or the same frame, and gradually hardening them off, preparatory to planting them out as early as the ground is in a fit condition. For late planting the Seed should be sown in May in a cold frame or open ground in soil that is well pulverized. Any good garden soil made rich by manuring, will suit. When the heads begin to form the leaves should be tied together to prevent the flowers becoming sunburnt and tough. In order to have them tender and of good flavor they must be gathered before they become too large. 1 oz. for about 3,000 plants. Set in rows $2\frac{1}{2}$ feet apart and $1\frac{1}{2}$ feet in the row. 3 to 4 oz. to the acre. Our Cauliflower Seed is grown in Denmark and is the best that can be procured.

EARLY SNOWBALL

Extra Selected

For years, this has been the best early sort for the market gardener and trucker's use, and the standard variety for the amateur. Sure to head and remain pure and white when others are discolored and unsalable. The heads measure eight to ten inches across when grown in good soil.

The seed we offer is of very superior quality and is grown for us by one of the most reliable Cauliflower growers in Europe, and the great care taken to keep it up to the highest standard is manifested in the superiority of the crops grown from it every year. It is of dwarf, compact habit, heads very large and pure white. Pkt., 15c; $\frac{1}{4}$ oz., 80c; $\frac{1}{2}$ oz., \$1.45; 1 oz., \$2.25; 2 ozs., \$3.75; $\frac{1}{4}$ lb., \$7.25; 1 lb., \$25.00.

EXTRA EARLY DWARF ERFURT

EXTRA SELECTED—Previous to the introduction of the Snowball this was the best variety for forcing, and the strain we offer is superior to much of the so-called Snowball Cauliflower. Pkt., 15c; $\frac{1}{4}$ oz., 75c; $\frac{1}{2}$ oz., \$1.25; 1 oz., \$2.00; 2 ozs., \$3.50; $\frac{1}{4}$ lb., \$6.75.

Celery (Golden Phenomenal)

Celery

One ounce will furnish 3,000 to 5,000 plants

Celery is a crop that requires a very long season. If an early crop is to be grown from seeds, the latter must be started indoors in boxes about the last of February, the plants being set in the ground, six inches apart, in May. The crop should be ready in August. Celery for winter may be grown from seeds started in the open ground in late April, but it is advisable to have a seed bed and to transplant the seedlings to the open field when large enough. It is well to cut off the lower half of the roots at transplanting time, and firming the soil around the plants is very important.

GOLDEN PHENOMENAL

The general characteristics are those of Golden Plume, but it is decidedly taller and the stalks are much longer to the joint. Free from any strings, fine flavor and excellent quality. Pkt., 15c; $\frac{1}{2}$ oz., 50c; 1 oz., 90c; $\frac{1}{4}$ lb., \$3.25.

GOLDEN PLUME, OR WONDERFUL

It is similar to Golden Self Blanching, but matures earlier, is larger and more blight, and blanches in half the time. It possesses all the excellent qualities of that well known celery, and we believe it is the most profitable sort to grow. Pkt., 15c; $\frac{1}{2}$ oz., 35c; 1 oz., 60c; $\frac{1}{4}$ lb., \$1.80; 1 lb., \$6.00.

A trench should be opened 16 to 18 inches deep and the roots placed upright in it $1\frac{1}{2}$ inches apart, and filled in with light soil, which places the neck of the roots about 8 inches below the level. If a quick growth is desired a covering of manure 10 inches deep may be used. FLORENCE FENNEL or FINOCHIO—This is a delicious Italian salad vegetable worthy of much more extensive use in this country. The thickened bases of the leafstalks overlap each other so as to form a "head", and this is usually eaten raw like celery or head-lettuce, although it makes a delightfully palatable dish when boiled. The flavor is somewhat like celery but with an aromatic sweetness peculiarly its own. Seed may be sown from early spring until midsummer. Thin out to 5 or 6 inches apart in the row (rows about 15 inches apart), and when the "heads" are about hen's egg size draw the soil half way up over them. Cutting may begin in about ten days. Pkt., 5c; 1 oz., 10c; $\frac{1}{4}$ lb., 30c.

ONIONS

CULTURE—The Onion is most successfully grown in a deep, rich loamy soil, and, unlike most vegetables, does best when cultivated in the same ground for a succession of years. Manure the ground well in the fall, and turn up in ridges, during the winter, and as early as it will work in the spring rake or harrow thoroughly so as to get the soil fine and level. Sow thinly in drills half an inch deep, rows twelve inches apart, and cover with fine soil, pressing it down. Keep the ground free from weeds and thin out the young plants so they may stand three or four inches apart. The small onions pulled may be eaten green and the balance allowed to mature. 1 oz. to 100 feet of drill; 4 to 5 lbs. to the acre.

CURRIE'S EXTRA YELLOW GLOBE DANVERS

Garden Peas

Two pounds to 100 feet of drill; 120 lbs. to the acre in drills.

Sow the Extra Early round seeded varieties as early in the spring as the ground can be worked, and the wrinkled sorts later, when the ground is warmer, as they rot readily in cold, wet soil early in the season. Sowings should be made at intervals until the end of May. Discontinue sowing until August, as Peas suffer very much during the hot summer months, after which the early kinds may be planted with good results.

Varieties marked * are wrinkled.

The price of peas up to 2 lbs. includes delivery by parcel post or express. Five pound prices and over do not include transportation. See zone rates.

Currie's Select Tomato Seed

CULTURE—Sow the seed in a hot-bed the first week in March, in drills half an inch deep. When the plants are about two inches high, transplant into another hot-bed or into small pots, one in each pot; in that way the plants are strengthened and branch out better. Set the plants out about the first of June, about three feet apart, for early crop, mixing a shovelful of well-rotted manure in each hill. For late crops, or where the soil is heavy, plant four feet

apart. Water freely when transplanting, setting the plant deep, and protect from the sun for a few days until the plants are fairly started. A few plants may be raised by sowing seed in a pot or a box in the house. Where only a few plants are grown, the vines may be trained to a single stem, removing all suckers, thus inducing earliness and superiority of fruit. 1 oz. to 1,500 plants, ¼ lb. for transplanting on an acre.

MANGEL-WURZEL AND SUGAR BEET

Sow early in spring in deep, rich soil, in rows 18 to 24 inches apart.

5 lbs. to the acre in drills 2 feet apart. Thin out to 9 inches apart in the row.

For feeding stock, few crops equal Mangel-Wurzel and Sugar Beets. Canadian farmers appear to appreciate this more than we do. The roots are stored in barns or pits before hard frost sets in and fed during the winter months.

The Giant Half-Sugar Beets are much more productive than the Sugar Beets and fully equal to the best of them in feeding qualities. A large portion of the root being above ground renders them easy to handle. Every stockman should give them a trial.

Mangel-Wurzel are also very nutritious and yield very heavy crops, often exceeding 1,500 bushels to the acre. It is not unusual to grow roots weighing upward of 20 lbs. each on fairly rich soil.

Prepare the ground thoroughly, using a liberal supply of barnyard manure, previous to sowing the seed.

IMPROVED MAMMOTH LONG RED—The largest and heaviest cropper of all the Mangels. The roots are often more than 2 feet long, and a half to two-thirds above ground, so that they are easily harvested. 1 oz., 10c; $\frac{1}{4}$ lb., 20c; 1 lb., 50c. By express at buyer's expense, 5 lbs., \$2.00.

GIANT INTERMEDIATE (Mammoth Long Yellow)—Similar in shape to the Mammoth Long Red, but shorter. Very prolific. 1 oz., 10c; $\frac{1}{4}$ lb., 20c; 1 lb., 50c. By express at buyer's expense, 5 lbs., \$2.00.

Alfalfa

LUCERNE

Prices subject to market changes without notice.

The great value of Alfalfa to the stockman cannot be over-estimated. No other forage crop combines so many excellent feeding qualities. The fact that three or four heavy crops of it can be cut every season should alone be an incentive to every farmer to put down at least a few acres of it. Alfalfa soil, however, should be deep and well drained. It will not succeed on heavy, sticky clay ground, or where water stands a short distance below the surface. Before sowing the seed see that the ground is well prepared by being thoroughly pulverized. Any extra work put on the ground at this time will be well repaid in the crop. If sown in spring, wait until the ground is warm, sowing from 20 to 30 lbs. of seed to the acre.

GRIMM'S CERTIFIED ALFALFA—Choice re-cleaned seed. Per lb., 35c; 10 lbs., \$3.00; 100 lbs., \$27.50.

Alfalfa Seed is shipped in Seamless Bags. When

The crop should be cut for hay just as it is coming into bloom. A safe guide is to watch for the starting of the new basil shoots, which form the growth of the next crop, before cutting. If the weather is fine the morning's cuttings should be raked into windrows the same afternoon, and cocked the following day.

We recommend using Northern grown seed. The U. S. Department of Agriculture in its investigation finds that the farther north the seed is grown the harder it is likely to be, and to meet these requirements we have secured a stock of strictly pure, re-cleaned Northern-grown seed.

EXTRA CHOICE HARDY NORTHWESTERN AND MONTANA GROWN RECLEANED SEED—Per lb., 30c; 10 lbs., \$2.50; 100 lbs., \$20.00.

New spray kills both CHEWING and SUCKING INSECTS

SOME of the 31 common insects that ruin vegetables, flowers and shrubs, *chew* the foliage. Others *suck* vital juices from it.

Few people can tell the two kinds apart. Nicotine Pyrox is one complete spray that kills both.

Greatly magnified chewing organ of insect which eats foliage.

Pyrox—for years the defense of gardeners against the chewing variety—has been treated with Nicotine, which makes it sure death to all sucking insects.

Mix Nicotine Pyrox with water, then spray. That's all you have to do to protect your garden from insect pests and blight!

Greatly magnified proboscis (sucking organ) of insect which sucks vital juices from plants.

ORDER EARLY. When possible, all orders are filled as soon as received, but during the busy season in April and May, delays are sometimes unavoidable; we, therefore, advise ordering early.

CORRESPONDENCE. We cheerfully answer all letters of inquiry promptly, and request that questions be written on a separate paper and not on order sheets.

GENERAL INFORMATION TO CUSTOMERS

HOW TO ORDER. Write your full name and address as plainly as possible so as to avoid mistakes, and give full shipping directions, stating whether wanted by Parcel Post, Express or Freight, giving the name of the Railway Company or Express Company. This often saves delay.

WE DELIVER all Flower and Vegetable Seeds either by Parcel Post or Express without extra charge at the prices given in this Catalog, to any Postoffice or Station in the United States, except where otherwise stated.

PURCHASERS PAY transportation on Tools, Fertilizers, etc.

PLANTS BY EXPRESS are not delivered free. Small plants are mailed with the soil removed from the roots. It is better, however, to have the soil left on the roots, especially the larger ones, and we advise shipping by express when possible.

PREPAID STATIONS. Where there is no agent at the railroad station, freight must be prepaid, and customers are requested to send enough money to cover the expense on bulk shipments.

NO CHARGE is made for packing seeds except for 2 bushel seass bags at 35 cents each, and goods are delivered free of charge to freight depots and express offices in Milwaukee.

WE GUARANTEE our Seeds to be thoroughly tested and such as will produce good crops under favorable conditions. That all Seeds will be delivered in good condition to our customers, by freight, express or parcel post.

NON-WARRANTY. Failures with seeds are mostly due to causes entirely beyond our control, such as too deep or too shallow planting, unfavorable weather or soil conditions, etc., and while we warrant all our Seeds to grow and produce good crops under proper conditions, and great care is taken in filling orders, we give no warranty, express or implied, as to the description, quality, productiveness or any other matter of Seeds, Bulbs, etc., we sell, nor will we be responsible for the crops. The purchaser must, therefore, accept goods ordered from us on these terms, or no sale is made.
