EXPLANATION OF PLANT DESCRIPTION TERMS

Immediately following the names of many of our plants we have entered descriptive terms in abbreviated form. An explanation of those abbreviations follows:

D = deciduous

E = evergreen

GC = ground cover

S = shrub

S/T = large shrub or small tree

SE = semi evergreen

trans = transplant

Hence D T = deciduous tree

S E S = semi-evergreen shrub

B & B = balled and burlapped

Hardiness Data

The zone number, given in the description of many of our ornamental plants, refers to the zones depicted on U. S. Dept. of Agriculture Plant Hardiness Zone Map on page 4.

The zone number which we give is the northernmost zone in which we believe the plant to be hardy under average winter conditions. It should be noted that a plants ability to survive the winter is not determined solely by the minimum temperature to which the plant is exposed but is also affected by the plant's general health, the soil moisture content, and the exposure to scalding sun and wind. Our assignment of a particular zone number to plant should not be construed as a guarantee that the plant will survive in that zone. We can make no warranty expressed or implied, as to the ability of any plant to survive after it has left this nursery.

AZALEAS

We will furnish one to five plants of a variety and size at each rate; five to 25 of a variety and size at the ten rate; 25 or more of a variety and size at the 100 rate.

If a variety is listed at 10 rate and not each rate, there will be an additional charge of 15 cents per plant if less than 5 are ordered.

Items marked by an asterisk (*) are classed as Lining-Out stock.

S. following size signifies Seedling.

KURUME AZALEAS

The Kurume Azaleas are one of the most showy of all flowers for the garden. They are also well adapted to forcing — thousands of them being sold for Easter, Mother's Day, and Decoration Day. They are comparatively easy to grow and make a wonderful display. Many of the varieties are hardy out-of-doors as far north as Long Island. The colors are almost every hue and shade except yellow.

AMOENA. Flowers rosy purple in dense masses. Hardy and early flowering. The foliage assumes a pleasing bronze tint in the fall and winter months.

GABLE'S HARDIER AZALEAS

Mr. Joseph B. Gable of Pennsylvania has spent almost a lifetime working with Azaleas and Rhododendrons. Many years ago he started breeding azaleas with the hopes of producing a hardier type of evergreen azalea in a good color range than then available. He has had wonderful success and is now recognized as the leader in the field.

These varieties will average hardier than Hinodegiri and Amoena and much hardier than the other Kurumes. All have lived and flowered in the open field where they have withstood temperatures of twenty below zero with only slight injury to a few. Most of them were uninjured.

U. S. D. A. AZALEAS

Some years ago the U. S. Dept. of Agriculture introduced a collection of Azaleas mostly from Japan. We have selected the following, as one of the best.

BENI KIRISHIMA. Old rose, esmi-double.

*4 yr.	7.00	60.00
-------------	------	-------

NEW U. S. D. A. AZALEAS

These varieties were developed by B. Y. Morrison and J. L. Creech at the U. S. Plant Introduction Station, Glenn Dale, Maryland, from a series of crosses made in 1947 and designed to incorporate some of the flower qualities of the Belgian-type azaleas into the hardy Glenn Dale hybrids.

After widespread trials of 96 selections, the azaleas listed here are considered to be the most promising for the azalea-growing areas of southeastern United States, from Washington, D. C., to Louisiana, and for forcing in all areas.

Their significant characteristic is in the pastel coloring of the flowers and the heavy texture of the petals. Occasionally the white selections are flecked and striped with red or purple, and some flowers show an irregular degree of doubleness. They flower in the Washington, D. C. area about May 8 to 15.

NOTE: EXPERIENCE HAS SHOWN THAT, OF THE FOLLOWING NEW U. S. D. A. AZALEAS, ONLY GREEN MIST IS HARDY AT THIS NURSERY. FOR OUTSIDE PLANTING WE RECOMMEND THAT THE OTHER THREE NOT BE USED NORTH OF RICHMOND, VIRGINIA.

BAYOU. (PI 279405). A spreading azalea with leaves narrow elliptic, slightly hairy, dark green. Flowers 2½" across, single but with occasional petaloid stamens, white with occasional scarlet flakes and stripes.

4 in. pot — 3 yr.	1.25	10.00
------------------------	------	-------

GREEN MIST. (PI 279406). A somewhat upright azalea with leaves glossy, narrow elliptic, glabrous. Flowers 2½" across, single, white with a distinct greenish blotch, heavy texture to the flowers.

PINK ICE. (279408). A broad spreading azalea, with leaves dull green, large rather obovate, glabrous. Flowers 3" across, double, mallow purple with occasional purple flakes, smooth margins and crisp texture.			

2¼ in. pot — 2 yr.	.75	7.00
-------------------------	-----	------

WHITEHOUSE. (PI 279409). A broad spreading azalea with leaves large, dull green, somewhat obovate, slightly hairy. Flowers 3¾" across, single, white with roundish petals with somewhat wavy margins and overlapping.

4 in. pot — 3 yr.	1.25	10.00

VUYKIANA AZALEAS

A new race of large flowered Japanese Azaleas, produced by crossing hardy Azalea Malvatica with Azalea Mollis. Sturdy growers, prolific bloomers. From the information we have they are much hardier than the Kurume Azaleas. Flowers range from 2 to 2½ inches. All bloom late midseason. Plants grow tall.

PALESTRINA. We recommend this to use in place of Ledifolia Alba for a tall growing whitebloomer. Try it for a hardier tall white.

BELTSVILLE AZALEAS

The Beltsville Azaleas originated at the Plant Industry Station of the U. S. Department of Agriculture at Beltsville, Md. They are mostly good greenhouse flowering varieties as well as being hardy in colder sections. The description is from descriptions furnished by the U. S. Department of Agriculture.

GUY YERKES. Salmon-pink, hose-in-hose. Very attractive.

*4 yr.	7.00	60.00

18 to 24 in. B&B	4.00	37.50

KAEMPFERI HYBRID AZALEAS

In the Kaempferi Hybrids — the result of crossing Kaempferi and Malvatica — there has been obtained the hardiest type of evergreen Azalea, with a good range of form and color in the flowers. Several years' tests have demonstrated that these Hybrids are just as hardy as Kaempferi, until now the hardiest of the evergreen sorts.

ATLANTA. Large purple flowers. Plants strong, tall growers. Same as Purple King.

BACK ACRE AZALEAS

By Morrison

These azaleas are the first of the seedlings grown on personally, with a breeding program that is an extension of one phase of the original Glenn Dale work. They are **not** Glenn Dales, but are more closely related to the Satsuki group from Japan.

The breeding program centered on the production of double flowers that will be hardy for outside work, and in as wide a range of kinds that have white or nearly white centers and colored margins. The doubles are represented in this offering but only a few of those to come. The white or light centered kinds are a mere sample of the range to be available shortly.

These kinds are from parents that are cold hardy in Washington, D. C. and plants have been tested safely in that area, in Memphis, Tenn., and in the general Atlanta area. In extremely cold winters there was some loss of flower buds.

The usual variation in degree of doubling may be expected on newly set plants, and the variations in light centers will vary considerably until the plants are old enough to have many, small, blooming shoots.

GLENN DALE AZALEAS

Since we began growing Glenn Dale Azalea, in 1941, they have become rather widely known and the demand for them has increased rapidly. Their ability to survive in areas where evergreen azaleas has previously winter killed has made them very popular.

Sometimes, when their flowers are described as striped or flaked, there will be scattered branches of solid colored flowers. Those branches should be cut out. This characteristic is inherent to the variety, not a fault of the nurseryman.

HEATHER

For convenience we have listed both the Callunas (Heathers) and the Ericas (Heaths) under one heading. Because of the very large amount of soil that clings to even small heathers, and the resultant cost of wrapping we are pricing the wrapped and those not wrapped separately. Thus our customers, who can pick up their plants here, can take the advantage of an appreciable savings.

Prices of Heathers Not Wrapped

EDCO IRON

For experimental use in the control of chlorosis (lack of chlorophyll) in azaleas, gardenias, roses, citrus crops, etc.

Results to date have shown Edco Iron to be very effective in correcting chlorosis in the above crops. Chlorosis may be caused by the excess or deficiency of several major or minor nutrient elements in the plant besides iron, and it may be caused by an excess of water or its lack, but Edco Iron commonly seems to help correct the effect if not the cause of these several conditions.

Full directions for using with each lot.

Prices: 1 lb. \$2.90; 10 or more lbs. at \$2.70 per lb.

ALUMINUM PLANT TAGS

Very convenient to use. Lasts years. $\frac{3}{4}$ inch wide, $3\frac{1}{2}$ inches long.

Made of thin aluminum. Can be embossed with ordinary lead pencil just like writing on an ordinary wood label. Permits writing label right in field. 100 for \$4.00, 500 for \$18.00, 1,000 for \$32.00 Postpaid.
