GET THE BEST, IT IS CHEAPEST IN THE END

A Word of Thanks.

IT IS with pleasure I again send you my catalog of Plants, Trees, Seeds, etc. I am indeed grateful to you for the large increase in my orders last spring. I sold more stock last spring than I had hardly hoped to sell, and I thank every one who sent me an order or who recommended me to a friend and I trust you were as well pleased with the stock you received as you expected to be. I tried to so please you that you would send me your order whenever you are again in want of any of the stock I grow.

If you will compare my prices with others I think you will find them in my favor, but do not think just because the price is less that the stock is inferior. **My stock is as good as any grown.** Which YOU already know if you have tested them.

I want YOUR order this season and promise to give you the very best service and stock possible.

Again thanking you for your favors, and wishing you abundant success in your efforts, I remain

Yours for a prosperous season,
LEAMON G. TINGLE.

Advice to Customers.

Terms. Payment invariably at time of ordering or before shipment. Remit by Money Order, Registered Letter or Draft.

How To Order. Order early. Use the order sheet, and be sure to write your name and address plainly. Give Post Office, County and State—and do this every time you write me. Be sure to say how goods are to be shipped; whether by mail, express or freight, and state plainly to what point goods are to be sent. No change or countermand of order can be considered final without my written consent.

Shipping. I deliver all goods to forwarders here without extra charge, after which my control ceases, consequently my responsibility also. I particularly caution patrons against having Strawberry plants shipped by freight; they should always go by express or parcels post. Transportation charges are to be paid by purchaser. If wanted by parcels post add 25 cents per hundred for postage.

Packing. We use great care in packing. Special care is taken to pack lightly, thereby reducing the expense of transportation. No charge for packing.

Substitution. It is my custom, should a variety of plants become exhausted, (which sometimes occur in all nurseries), to substitute a similar variety. When it is desired that I should not do this, just write on your order "No Substitution."

Claims. If any must be made on receipt of goods, when if just, will be made satisfactory. Claims made after ten days from receipt of goods will not be entertained. I send out only good stock in good condition, carefully packed, in all cases; but success or failure depends in so large a degree upon the care and management after received, that I do not, BECAUSE I CANNOT, undertake to guarantee stock to live.

Guarantee. I warrant my stock true to name, with the explicit understanding that should any prove untrue, I will return the money paid or replace it with other stock; but am not liable for damage beyond this.

Western Union Telegraph, Pittsville, Md.

Testing New Varieties.

By all means have a small plot of ground for the purpose of testing the new varieties. Each season get a few of each of the new kinds that appeal to you. By doing this you are not investing a lot of your money in something that may not suit your soil or locality, while among the new ones you are likely to find some better than you now have. Many large growers say they could not afford to be without their testing plot. This is not an expense as you will get enough berries from it the first season to pay the expenses. Make a start this season.

1

Strawberry Plants

Abington Descended from the popular Bubach but much superior to it. Although a perfect flowered variety, it equals the prolific Bubach in yield, is brighter in color and much firmer. Plant of vigorous habit with clean, healthy foliage; berries are so large and attractive and the plants so very prolific, it is a variety of great value—especially for market growing. Ripens mid-season.

Aroma A late and very popular berry in all sections—a favorite of the large associations. The plant is very healthy and productive, makes a fine growth. The fruit is very firm, large and uniform in size, one of the best sellers on the market. The Aroma is very strong as a pollenizer, therefore a good variety to plant with imperfect late sorts.

August Luther A berry of very pleasing appearance, being of a very bright red color and almost always of perfect shape, a slender, rather shary pointed berry. It ripens evenly, no green tips, and will ripen its full crop in a very short space of time, making it a good market berry.

Barrymore (*Per.*) A superb variety. The bluntly conical berries are of great size, beautiful to look upon, firm and meaty and are of surpassing quality—rich and sugary. The color is rich dark crimson, which it holds unchanged after picked, with glossy surface, the flesh is deep red. Valuable alike for the home garden and for market growing. Mid-season to late.

Bayside The plants are of Gandy type but much larger, with tall, broad healthy foliage, are deep-rooted and good growers on any soil. The blossoms are perfect and the fruit is produced in clusters on large, strong fruit stalks. The fruit is large, of even size and shape, roundish conical, dark, glossy red, of good quality and very productive. Has given general satisfaction.

Bubach Has for many years been one of the best known and favorite berries in the large markets and holds its own against many new comers. No mistake is made in planting it extensively. It is prolific, of good appearance and of excellent quality; a grand old variety that always proves satisfactory.

Brandywine (*Per.*) A variety that thrives in almost any soil. The berries are large, broad and heart shaped, of medium red color, with bright yellow seeds and firm flesh, which is red through and through. These points, combined with large size, productiveness and firmness of texture, make the Brandywine a very valuable strawberry, especially as it has a peculiarly rich, spicy flavor that charms all who taste it. This variety gives general satisfaction throughout the country. Medium-late.

Bederwood This is generally conceded one of the best early varieties for home use or market. It is a splendid grower, making a large number of strong runners. It has a perfect blossom, and is immensely productive. Fruit of good size, light red, medium firm and good quality.

Corsican C. A. Green of Rochester, N. Y. says this is the biggest berry on earth, and also his favorite. Here are his reasons: "First, it is the biggest berry; second, it is the brightest and best in color; third, it is a great yielder and producer; fourth, and most important of all the foliage is exceedingly vigorous and leathery, resisting fungus, drought and even neglect of cultivation."

Clyde As large as Bubach, and about a week earlier and very firm. Plant is vigorous and healthy. Well-known standard market variety.

Chesapeake (*Per.*) Undoubtedly the most popular berry in America. It is one of the finest flavored berries, and if quality is considered, you will make no mistake in planting largely of the Chesapeake. Quality however is but one of its good traits. The color is a dark red resembling the Marshall. It begins ripening a few days ahead of the Gandy and continues to bear abundantly as long as this variety, yielding, in many cases as much again as this old time favorite. It makes just enough plants to give the best results in fruiting, the plants are immense with good strong fruit buds. The leaves are large, almost round, and protect the bloom and fruit from frost and weather. Fruit uniformly large, averaging larger than the Gandy, and as compared with that popular old variety it is more productive, firmer, of better quality and without green tips. When crated ready for shipment it presents a very striking appearance, always bringing a fancy price. Its immense size makes it easy to pick, the fruit being borne on long stems, the greater portion of which stand upright, holding the fruit off the ground, thereby making them easy to pick.

Collins Introduced last year by Mr. Whitten of Michigan who says, "In offering this new strawberry at this time I feel that I have something that will be an acquisition to our list of market sorts and is also of such superior quality that the amateur will be delighted with it. A seedling of the Bederwood, but is of much stronger growth, making a good row, but is not the excessive runner that Bederwood is; the foliage stands up very strong and rank, of rich dark green color, and is free from rust or disease. The fruit is quite different from Bederwood, which is light colored, and not of the richest quality, while Collins is of a dark red color from surface to center, and of rich flavor, ripening evenly without green tips. The texture is something of the Bederwood type and ripe berries will remain on the vines several days without souring. Mid-season to very late."

Charles I Mr. Baldwin, the introducer says: "For years we have been looking for a good extra early strawberry, and in Charles 1st, we have found just the strawberry that we have wanted. It ripens nearly a week before Michel's Early and is very productive, yielding more quarts of large berries than any other early variety. It is a strong fertilizer and a strong grower. Berries are large, regular in form and of good color and quality."

Climax Of a large size and uniform shape, splendid bright color with good flavor. Plants very strong and hardy, foliage a beautiful light green. Very productive and a profitable one to grow.

Crescent This is one of the old standbys and is certainly a good one and very dear to the hearts of strawberry growers. Very productive and of splendid quality and is a sure bearer.

Chipman The plant is of strong upright growth with large healthy foliage. The glossy red fruit is medium in size, very prolific and an ideal variety for home consumption or local market.

Dornan or Uncle Jim A western strawberry that is attracting much attention for its superior merits. Plants unusually robust with large, healthy foliage. It is a remarkable drought resister and a big and reliable producer of extra large berries—very uniformly shaped—of a bright red color and of high quality. It is claimed by the introducer that the fruit brings 25 per cent more in the Chicago market than any other variety, on account of the large size, handsome appearance and fine quality of the berries—12 selected berries often filling a quart measure heaping full.

Doris A new berry originating at Hammontown, N. J. Claimed by its originator to be the most profitable strawberry for market ever grown, having most of all the desirable qualities of a late market or home use berry.

Duncan Ripens between Parsons' Beauty and Gandy resembling the Gandy in both fruit and foliage. Berries large and a good shipper.

Early Jersey Giant (Per.) Ripens with the very earliest. Berries very large, brilliant scarlet-crimson, conical with pointed tip, colors all over at once, has delightful and rich mild wild Strawberry flavor. Large light green calyx or "cap" hence exceedingly showy and attractive. Blossoms large, perfect, open rather late, thereby missing the late frosts. Plant is a strong grower with large leaves on long pliant stems and a heavy yielder.

Early Ozark (Per.) A new early berry that has come to stay. Very productive, will outyield most of the early varieties, berries are large, and bring top prices. They ripen about three days later than Excelsior, and a day or two earlier than Klondyke. Plants are strong rooted, large and of good dark green foliage.

Excelsior An old variety which leads them all for earliness. They ripen from three to four days ahead of the leading early varieties. Makes plants freely, berry is of dark red color, of good size for such an early berry, and will ship well, being very firm; a great yielder and considered the sourest of them all, although I am very fond of them if left on the vines until "dead" ripe.

Ewell's Early Strong grower, berries larger than Excelsior and more productive. If given half a chance will take care of itself and give good results. Berries are good shippers.

Early Market I have been growing this berry several years and the more I see of it the better I like it. It is a very early berry, dark red, of good quality, good shipper and very productive; rank foliage. If you are after an early berry, try this one.

Fendall (Imp.) A large berry of fine flavor, very beautiful, rich in color, smooth and glossy, with long stems and large caps. A strong growing plant, with healthy light green foliage. The plants and fruit will command attention wherever seen. Be sure and include the Fendall in your list, if you want large fancy berries and lots of them. Mid-season to very late.

First Quality The plants are very large, strong upright growers with healthy dark green foliage. In productiveness it ranks with Sample and other well known varieties and the fruit is of the largest size, uniform in shape, colors well, firm enough for a commercial variety and of good quality.

Gandy (Per.) One of the universal favorites and as a "money-maker" hard to beat. A good grower with tall, healthy foliage and produces large, dark crimson berries, that when fully ripe, are of excellent quality. It is a splendid shipper and always brings fancy prices. A free plant maker and a good grower while its extra firmness makes it keep on the vines longer than almost any kind I know. Late.

Glen Mary It is one of the most popular of the standard varieties, especially through New England, the Middle West and Northwest. Makes large, healthy plants, with dark green foliage; blossoms are semi-staminate but carry enough pollen to fruit its own berries. As a good, firm shipper, it is very popular for fancy local market and for long distance shipment; for this reason it is very popular with both large and small growers. The fruit is big, dark red, with prominent bright yellow seeds; the meat is rich and juicy, of such high flavor that once tasted more is wanted. It is capable of enduring more than an ordinary term of dry weather through the fact that it is a deep rooted variety, and makes responsible the dark green color of its foliage.

Gibson A vigorous grower with ample foliage and long roots, which enable it to yield abundantly even in times of drouth. The fruit is large, red to the center, with a fresh, green calyx, nearly round, and very firm, making it a good shipper. It is good for canning, or for the table.

Hammer Introduced last year by Mr. Baldwin of Michigan, who says, "We are introducing this valuable new variety this year and we want you all to try a few plants, as we know you will be pleased with them. Hammer is a new variety found growing in the woods near Bridgman by Mr. August Hammer, one of our prominent fruit growers. We have watched in on the grounds of Mr. Hammer for the past two years and it surely is a wonderful producer. The fruit is very large and of a beautiful, dark-red, glossy appearance. Season medium late, and very productive, making it a valuable commercial berry." I have not fruited this berry yet but it has made a splendid growth which resembles the Chesapeake very much.

Hundred Dollar (Per.) A very valuable mid-season variety. The introducer claims that "there is not another variety of Strawberry that will outyield this giant or surpass it in quality" has to a large degree been fulfilled. The plant is a strong vigorous grower, and among the most prolific. The berries average very large indeed, the color is bright scarlet and the quality mild, sweet and luscious. It is not very firm—not firm enough for long shipment. There are indeed few varieties more valuable for nearby markets or for the home garden.

Haverland An old standard variety which seems to do well everywhere. It never rusts or shows any blight. Has an imperfect blossom but easy to fertilize; a good plant maker; enormously productive of long, conical and even shape berries. If in doubt, plant Haverland.

Heritage (Per.) A long season variety—from quite early until quite late. The berries are large, many of them very large, and the yield is heavy. The quality is fair and the texture firm, but unfortunately many of the berries are ridged and seamed and the color is not very bright; hence, it does not present an attractive appearance. However, the plants are so vigorous and healthy, and yield so bountifully, it has much value.

Helen Davis Noted for its productiveness and very long fruiting season; yields enormous crops of very large berries, many of them average as large as medium sized hen eggs; foliage tall and green; a good plant maker.

Joe Johnson **BIG JOE** (Per.) This is certainly one of the very best, if not THE best mid-season to late berry grown today. I introduced it to my trade in spring of 1914. Nearly all the leading Strawberry nurserymen purchased some for trial, they as well as the berry growers, who have tried it are very enthusiastic about it. There is not often much demand for plants of a new berry, but last spring, before the digging season was half over I had booked orders for my entire supply, and turned down an order for one hundred thousand from one party. The berry is a beautiful red with a bright green calyx, which adds much to its beauty and market value. Flavor is of the best, is a perfect table and canning strawberry, and a superior shipper. Has the three requirements of a successful berry—large, firm and prolific, also succeeds upon almost all soils and under all conditions. I want you to try this valuable berry and I know you would if you once saw it fruit.

Jessie Jessie ranks among the leaders with growers who want fancy strawberries and whose soil is adapted to its production. Under right conditions it is one of the most satisfactory varieties produced by commercial growers. It is an extra heavy yielder of highest quality fruit and a good pollenizer.

Jerome Growing rapidly in favor here in the east, also becoming universally popular in the Rocky Mountain regions. The berries of this variety are bright red, rich in flavor, and are splendid shippers. Jerome also is a strong pollenizer of pistillate varieties, and these numerous and important qualities promise to make it quite generally grown in these sections.

James E A good, large-fruited, medium early variety. Bears an enormous crop of large attractive berries, and of fine quality.

Kellogg's Prize Introduced in 1913 by the R. M. Kellogg Co. and in their 1915 catalog they say, "Reports concerning the performance of this variety that season were largely from our own observations, and were in every respect confirmative of our highest expectations. But in 1914 there came to us from all sections of the country such a grand chorus of praise as has never been given to any other variety in history. The reports came direct from the fields of our customers, and the descriptive word most frequently applied is "magnificent." The highest claims we ever have made concerning this variety are more than verified in the experiences of our customers. Kellogg's Prize is a pistillate variety, with a very long fruiting season. It thrives in soils of every class, and yields immense quantities of large, perfectly formed berries, highly colored from center to circumference, its golden seeds lending a gloss to the surface of surpassing brilliancy and beauty. There is no other berry having a flavor of greater delicacy. Here we have a combination of excellences not often found. Foliage large and healthy; calyx large and green. We can without hesitation recommend this variety as the principal crop in any field, confident that every reasonable expectation will be more than satisfied." In 1914 I sold all the plants I had of this variety, last year I sold more than twice as many as I did in 1914 but kept a few plants to see some of the berries, I was very much pleased with them and can conscientiously recommend them to you for trial.

Kellogg's Premier "An early bisexual very rich in fertile pollen. The fruit begins ripening with the earliest varieties and comes into fruit with early varieties and continues until the latest varieties are at their best. The Premier berries are larger than those produced by any other early variety. The fruit is deeply and richly colored and very firm, which makes it a splendid shipper. As to productiveness, no other early variety equals it, and the quality of the fruit is simply superb. The foliage is light green, grows tall and spreads completely over its load of fruit, which protects the berries from the sun. We have never seen a berry affected by sun-scald or rot on this variety. The leaves are smooth, bright and clean. Premier is a good runner maker and easily handled in the fruiting bed. All who have seen this variety in fruit pronounce it the greatest of all early varieties. In a word, it is the Premier of all early strawberries." The above was taken from the R. M. Kellogg & Co's description of this berry in their 1915 catalog. I am very much pleased with the growth and looks of this plant and do not think you would go wrong in planting a few of them.

Klondyke This berry is a money maker. Berries uniform in shape and size, dark red, mild and delicious, very handsome. Plants make a remarkable growth, are tall and compact, stalks strong, leaves light green, makes abundant runners and an unusual number of crowns. One of the very best paying early varieties, and is such a good shipper that its appearance in the market causes it to be eagerly bought by those who are ready to pay good prices for fancy fruit. Plant Klondyke for more trade and more profits.

Longfellow The season of this great variety is early to late, and few varieties excel in the amount of fruit produced. The fruit is long and of a perfect strawberry type. In color it is a dark red, and this color extends from circumference to center. In flavor it is rich, mild and sweet. It is a profuse bloomer and every bloom is perfect, making it an ideal pollenizer of pistillates of the early and mid-season sorts.

Lady Corneille Mr. Thomas of Illinois says "This wonderful new strawberry has more good qualities than ever before combined in any one berry. It is destined to become the leading strawberry, both North and South, East and West. It is better than the Klondyke or Senator Dunlap. That is saying a great deal, but is not saying too much, for it merits it. There are so many good things to say about the Lady Corneille that it seems almost flattery to mention them all. The Klondyke for a long time has been the leading Southern Strawberry, and the Senator Dunlap the leading Northern strawberry, but the growers have been wishing for a better berry to take their place, one that would yield heavier, better quality and firmer. The Lady Corneille can and will do this, and will be planted extensively just as fast as growers can secure plants. The plant is simply a beauty with glossy, rich green leaves, stands drought better than any other strawberry and thrives in both clay and loamy soil. Ripens same time as the Klondyke and Senator Dunlap, but continues in bearing much longer. The berries are supported on heavy, stinky fruit stems and everyone matures into a perfect berry. The blooms are rich in pollen, calyx large and heavy and remains green, giving a beautiful appearance to the fruit. Berries large, rich, glossy red, slightly long, with bright golden seeds which add to their beauty. Quality the best of all berries, having the true strawberry flavor, rich, sweet and delicious. The berries are very firm and the best shippers known. Never before have so many good qualities been combined in one variety of strawberry. The Lady Corneille has the size, color, shape, appearance, firmness and productiveness which goes to make a successful berry." The Lady Corneille and Joe Johnson are two berries that will bring you the money.

Late Jersey Giant (Per.) Introducer says: "The latest of all strawberries and best late variety. It undoubtedly has blood of the Gandy in it, but superior in quality; the berries larger, more brilliant color and produced in greater numbers; uniform large heart shape, smooth and glossy, firm and meaty. I regard it as the most beautiful strawberry I have ever seen."

Lea Makes a strong, sturdy growth without a sign of disease, has perfect blossoms; texture firm, season early, very productive, ripening evenly all over at once without green tips and is uniformly medium large. The originator says it will stand more rainy weather and keep in better condition than any berry grown.

Lady Thompson Berries medium in size, and very rich flavor. It is extensively grown throughout the South and is also becoming very popular in the North. Very productive, a thrifty grower, and a great drought resister. I have a nice stock of these this season.

Lovett Well known standard market variety. Fruit large, bright red; firm and of good quality. A good grower, productive and reliable.

Mascot A fine large late variety that is giving satisfaction in all sections and is bound to become popular. The plants are large and healthy, making splendid beds on nearly all soils. The foliage is a dark glossy green, free from rust. The fruit is fully as large as Gandy, glossy red and of fine quality. It begins to ripen a few days earlier than Gandy and continues in bearing until all the late varieties are gone. Does especially well in Pennsylvania and West Virginia.

Marshall (Per.) Too well known to need any extended description. This is a berry that has been so popular in the New England market for years, where the grocers are always delighted to get it on account of its rich, dark red color, that it is bound to attract and please customers. It is one of the richest flavored strawberries grown. It is a strictly fancy berry. Mid-season.

Myers No. 1 The berries ripen about three days before Gandy. It will bear extra large crops, let the weather be wet or dry. Succeeds on all soils; fruit medium size and firm. A favorite for long distance shipping.

McAlpine The berries are a beautiful scarlet in color, very large and very fine in quality. Does up well in the package and brings the top of the market. Under date of June 9, 1913, W. O. & H. W. Davis, commission merchants of New York City, wrote "We had three shipments of the McAlpine Strawberry this morning, and sold them for 23 cts. a quart wholesale. We think this the finest berry that we have seen for a good many years, and the trade is carried away with it. This is the third season this berry has been fruited, and we think it far superior to any berry we have ever sold; it is large in size, a heavy yielder and holds up in size until the very last picking."

Missionary This variety is taking the lead as a southern berry. Plant growth all that could be desired. The berries are large in size, beautiful color, which shine as if varnished; large double calyx; very productive. Its season is from four to five weeks. Very richest and best quality; best shipper, has a very tough skin, not easily broken by handling.

McKinley (*Per.*) Unrivalled as a strawberry of high quality. Berries large, handsome and freely produced on strong growing, healthy plants. Ripens in mid-season and is too tender in texture to endure shipment. It is pre-eminently a variety for the home garden.

Michel's Early For eating from the vines after it is full ripe there is probably nothing better. Those who have a garden or a good local market for an extra early berry will find the Michel's just what they want.

Monroe A seedling of the Sample and much like Wm. Belt in flavor and color, but firmer and more uniform in shape. The blossoms are perfect and they continue to bloom through a long season. Makes plenty of runners.

Myrtle The originator says: "Largest extra early berry by far that I have ever seen; very firm, a perfect bloomer with large blossoms full of pollen, double cap, a great plant maker, rank foliage and a dark red berry."

New York This is the strawberry that was awarded a prize of \$100 which was offered for the best and largest variety. The plant is an unusually robust grower, making but few runners, throwing its strength and vigor into the magnificent berries, which are produced in great abundance and are of immense size. In form they are very handsome and regular, of a rounding conical shape. Color a crimson-scarlet dark, rich and inviting, coloring all over and leaving no green tips. The flavor is deliciously rich and melting. For a family strawberry it is one of the best, but its large size and delicate texture would possibly prevent the berries from arriving in good condition in distant markets.

Nick Ohmer Mammoth size, beautiful color and great productiveness. The plant is exceedingly vigorous, with clean healthy foliage, without the slightest tendency to rust. A perfect giant among strawberries, roundish-conical in form, uniform and regular; rich glossy crimson, firm and solid, excellent in quality and average large to the very last picking. Last season I had the largest stock of plants I ever had but before the season was half over I had booked orders for my entire stock. This season I have several hundred thousand.

Norwood Introduced in 1908 at \$10.00 per dozen and every year since the demand has been greater than the supply. Norwood is similar to Marshall in many ways but is a better grower and more productive and reliable. The fruit is large and handsome, regular in form and equally as fine in flavor as Marshall. The season of ripening is the same as Marshall, mid-season.

Ohio Boy The plants are vigorous, very productive, fruit large, dark red and a good shipper. It begins to ripen with the late mid-season varieties and continues in bearing until the late varieties are gone.

Orem Begins to ripen with Gandy and bears an abundance of berries after Gandy is gone, and about three times as many. The berries are exceedingly large and smooth light red with yellow seeds and dark green caps, which make them very attractive.

Pride of Somerset Introducer says: "It is as early as Excelsior, good plant maker of large, healthy, deep rooted plants. Is a chance seedling and unlike most other very early varieties it has a long bearing stem which holds the fruit off the ground. Very productive of large berries. A great feature about this wonderful variety is that there are very few small berries as every blossom matures a large berry, nearly all one size. Color a beautiful red all through, ripens all over at once, no green tips; shape medium long and round; blossom perfect and rich in pollen; cap very large and green which shows off the berry nicely; very firm, good shipper. The flavor is unexcelled, extra good for a family berry. Has never shown any sign of rust or disease; foliage very heavy, tall and thick. The past season it excelled all others as an early berry."

Todd's Late Champion Mr. Todd of Delaware, the introducer says: "It is one of the latest varieties I have ever fruited and will produce as much fruit as any variety I have ever fruited. The plants are extra large, with tall, dark green, healthy foliage; it makes splendid plant-beds on any soil. The blossoms are imperfect and each plant produces several strong fruit-stalks which keep the fruit well off the ground and it is well protected by the tall foliage. The fruit is large, of even size and shape and the color a bright glossy red. It is firm enough for a commercial variety, as late as any variety I have fruited, as productive as any variety I know of and I think it will please all who give it a trial." The plants have made a good showing with me.

Pride of Cumberland Compared with the Gandy, it is a week or more earlier in ripening, of the same large size and regular shape with large cap and deep red color, which makes it very showy in appearance, and is unexcelled for shipping. The blossom is perfect; the plant vigorous, free from rust and remarkably productive. Pride of Cumberland is the plant for business. Most all the fruit is held off the ground by strong bearing stems.

Parsons' Beauty One that may be depended upon to produce a large crop of fruit every season. The plants are splendid growers on any soil and without a sign of disease. The fruit is large, conical, uniform shape, dark red and fair quality. Largely planted by commercial growers on account of its vigor and productiveness.

Paul Jones This is one of the best varieties ever introduced. It always produces a large crop of the finest fruit on any soil and in any weather. The fruit is of the larger size and holds its size to the very last, is of even size and shape and of the finest flavor, a splendid keeper and a variety you will make no mistake in planting. Very popular with large commercial growers.

Pride of Delaware This is described by the originator as "large, firm and evenly colored, nearly uniform in shape and size; the foliage very bluff and stalky, holding the fruit up from the ground. It has large green caps, closely resembles the Gandy and ripens two or three days earlier than the Gandy and, on high soil where it originated, it is three times as productive."

Pride of Michigan From Mr. Baldwin of Michigan. The berries are large, rather oblong, very bright red, glossy and beautiful. It being very firm makes it an excellent shipping berry. The plant is vigorous and healthy, making a good fruiting row in any kind of a season.

Pennell This variety is a most vigorous grower and a sure cropper, and the fruit is large and fine when the plants are not allowed to set too thick in the rows. The berries fresh from the vines possess the finest, richest flavor possible to imagine. A variety for the home garden, for yourself and friends.

Rewastico Mr. Allen, the introducer says, "The color is a rich, deep, cardinal red, which penetrates the berry through and through. In productiveness it is all that could be desired; in size it is uniformly large; in shape as perfect as if turned out of a mould; in plant growth it is healthy and vigorous; in quality it is rich, with aromatic strawberry flavor, though somewhat tart, but is firm enough to be very popular as a market berry. I consider it the only real competitor the Chesapeake has ever had and in some respects it even surpasses that popular variety." Mr. Allen has been very brief but since fruiting it I can say it is all he claims for it. It is, without exception, the most productive strawberry I have ever fruited.

Robbins' Prolific (*Per.*) Introduced by introducer of the Sample who says it is better and more prolific than that popular variety. He describes it as follows: "It is a very strong vigorous plant with long roots. Makes plenty of plants and needs plenty of room to grow. Every berry of fine shape and as perfect as if run in a mould. A sweet berry; a firm, good market berry. An early berry, and holds out late also a fine berry to plant on dry land."

Ryckman Its great size and productiveness, thrifty growth and delicious flavor make it one of the most valuable berries ever grown for business purposes. Many extensive growers say that it produces even larger crops the second year than it does the first. It is also noted as an extremely valuable variety for poor soils and for fruiting continuously on the same ground for a number of years. It ripens in mid-season and is a perfect flowered variety. Try it.

Superior A great market variety for the commercial grower. Not excelled by any for shipping and keeping as it is one of the firmest berries I ever saw. The plants are vigorous and healthy and succeed on any soil. It is a great plant maker and should be planted a good distance apart. It sets an immense amount of fruit and if planted on rich soil, or is well fertilized it will not be surpassed by any variety in productiveness. The fruit is medium to large, bright glossy red and of good quality.

Sample One of the very best strawberries and a money making late variety. Sample produces a very heavy crop of nice, showy berries of large size and fine quality, continues a long time in fruit the berries being large to the last. It will yield as many berries as Haverland and will average as large as Bubach. Colors all over at once—fruit perfect, foliage perfect. You will like Sample and they will make big money for you. My block of Sample is splendid this season.

Stevens' Late Champion (*Per.*) A descendant of the Gandy. It ripens late, and is similar to the Gandy in many respects; except that it yields nearly twice as many quarts of berries upon a given space and the berries are not so uniform in size and shape nor so handsome. One of the most prolific and profitable of the late varieties for market growing and a valuable sort for the home garden.

Success (*Per.*) One of the finest early varieties for the home garden. Berries round or slightly elongated, bright scarlet or flame color, quite large and very uniform in size, color and shape. Plants are vigorous, healthy and most prolific. Though the berries are not firm enough to endure long shipment, it is one of the most profitable strawberries for local market and very desirable for the home garden.

Staples In some of its characteristics the Staples resembles the old and popular Warfield, but has the added advantage of being a perfect flowered variety. It is of perfect-strawberry form, ranging from rich crimson to deep wine in color. Staples has what we may call the true strawberry flavor and is deliciously tart. Introduced four years ago and has become very popular.

Senator Dunlap The Dunlap is a variety that beginners who know practically nothing about strawberries can succeed with. The foliage is tall, upright with a long leaf, and has more than the ordinary power of developing a heavy crown system. It has an extra long flowering season; the bloom is handsome and exceedingly rich in pollen, which makes it very valuable to plant with such pistillate kinds as ripen in its season. Its long roots go down into the sub-soil for moisture, and a severe drouth has less effect on it than most others. The fruit is a dark red, with a glossy finish, shading to a dark scarlet on the under side, with prominent yellow seeds that look like gold embedded in highly colored wax. The meat is bright red all through and exceedingly juicy. For a medium size, very productive, mid-season berry don't hesitate to plant Dunlap.

Sharpless An old variety but still very popular. Plant vigorous and hardy, very productive. A good one for home use.

Townsend's Late Mr. Townsend, the introducer says: "This is one of my very best money makers. As a late variety it has been tried in a great number of states and has proven profitable in every direction. Season comes in just ahead of Gandy and other late varieties, is a strong, hardy grower, making a plenty of strong deep rooted plants. Will stand more dry weather than any late variety I know of. Fruit large to very large, round, uniform in size, color deep red to the center, no green tips, flavor fine, very mild. Is considered one of the very best varieties for family use and as a commercial berry I know of nothing better."

Twilley Large in size, well-colored, and what is very important to the commercial grower, it is exceedingly firm. The eating quality is excellent. It makes a large, vigorous foliage of a healthy, rich, light green foliage. The Twilley will hold an important place among the list of fancy strawberries, whether wanted for the home garden or distant markets.

Tennessee Prolific A favorite with many growers in all sections. The plants are good growers in any soil, very productive, fruit large, bright glossy red and of fair quality. Ripens second early. A good one to plant with imperfect sorts.

Three W's Mid-season. Noted for its extra long keeping qualities. Originated in Tennessee; plants are very large and vigorous; with a wonderful root system; very fine for dry localities; fruit is of large size, good color and an extra strong flavor.

Warren Originated by Mr. S. H. Warren of Mass., the well-known strawberry judge who spent most of his life in growing fancy Strawberries and he claimed this the best he ever grew. The fruit is so large and handsome it is one of the first to sell at a good price, even in a glutted market; it also is an extra berry to stand up after being packed, therefore a good shipper. The plants are good growers, extra large, with thick dark green foliage.

Wm. Belt (Per.) A king among Strawberries. The plant is vigorous and succeeds upon a great variety of soils, and invariably yields very heavily. It begins to ripen quite early and continues almost to the close of the season. It is firm and a good shipper and gives large pickings for a longer period than most varieties. Considered by many to be the best berry grown today.

Wilson One of the oldest strawberries in America, and today is not surpassed by any other variety for productiveness; the fruit is very large and firm; one of the best for market purposes; a great plant maker, which are very strong and will succeed on any variety of soil. I have a nice stock of plants.

Warfield A well-known standard shipping and canning berry. Plants very vigorous and productive. Fruit large, nearly round, dark, glossy red, firm and of good quality. Warfield and Dunlap make a good, strong team.

Fall-Bearing Strawberries

Americus The plant of the Americus is very healthy and a strong grower; the berry is medium to large in size, firm, uniform shape, bright red through and through. The plant when loaded with berries is a beauty. The berries have the wild strawberry flavor, and I consider it the best flavored of all the fall-bearers to eat right off the vines but for table use I prefer some of the others. I only have a few thousand of these this spring and will not offer them in lots of over 100.

Superb (Per.) This will not bear during the first summer on young plants like the Progressive, but the berries will run almost twice as large and are as glossy and handsome as Chesapeake and Gandy. Superb will make a good matted row, and the parent plant will bear berries all summer; then the next berry season you can pick a full crop of handsome, large fruit that will sell with the best regular varieties. Immediately after this crop is harvested work out your beds nicely, and by mid-summer they will begin to bear a second crop and will continue to do so until halted by frost. By growing them one summer like other berries a full crop may be picked in the regular season and then a second crop from mid-summer until frost.

Progressive (Per.) For many years there has been a persistent effort on the part of berry-breeders to secure a summer-bearing Strawberry that would bear a profitable crop of berries in the late summer and fall. They have at last succeeded in producing several varieties of this type. Among which is the Progressive, which I consider the best one of them all. It will bear freely the same year it is planted on the young plants made the same year planted. In quality they are of the best, have good color and shape and are about the size of Senator Dunlap, which they resemble. The plant is vigorous and healthy in every respect, and runners freely. If the early summer is favorable and you use the matted row system, by August 1 you will have a bed sufficiently wide to produce a good picking of berries at least three times a week.

Strawberries are my favorite fruit, and I can find some good points in all of them but if I could have only one variety it would be the "Progressive." Some others would be preferable as a regular season berry but with "Progressive" we can have berries of good quality every day from May until Thanksgiving day.

Why Tingle's Plants Succeed

Our Strawberry plants are taken from young beds, fresh dug before shipment, plants are well-rooted and not dug from old or run-down beds. These plants are from beds that have never borne a crop and will bring you best results. In the fall our ground is plowed to a good depth and then we broadcast stable manure on top of the plowed ground, then let it stay this way until spring, we then thoroughly pulverize the soil, and at the same time mixing the manure with the soil, by harrowing. After the plants are set and begin to make runners we fertilize them with commercial fertilizers, this is repeated late in the summer. The deep plowing with an abundance of plant-food given the plants causes them to make a splendid growth with lots of long fibrous roots. **You** need these kind of plants and it **will** pay you to get them. Which kind of plants had you rather have, plants that have been carefully grown and that are full of life, which will produce big crops or plants that have not been fertilized—plants that have been grown only for quantity without a thought of quality? **If you want the kind that will make you a successful berry grower and that will produce you the largest and best crops, plant Tingle's full of life plants—they succeed.**

LADY CORNEILLE. A New Early Berry of Great Merit. Try It.

Apple Trees

	Each	10	100	1000
First-class, 2 year, 5 to 6 feet,.....	\$0.25	\$2.00	\$15.00	\$125.00
First-class, 2 year, 4 to 5 feet,.....	.20	1.50	12.00	100.00

Gano or Black Ben Davis. Uniform in size; keeps until March; rapid grower, fruit very large and handsome. Flesh pale yellow, mild sub-acid. November to March.

Northwestern Greening. A hardy winter Apple, the size is large; color green, which turns yellow at full maturity. Flesh yellowish, fine grained tender and juicy.

Stayman's Winesap. Fruit medium large; skin green and yellow almost hidden by dark red stripes. Flesh yellow, firm; quality unexcelled. November to April. The best here with us.

Grimes' Golden. Large size. Skin golden yellow, sprinkled with gray dots. Flesh tender, crisp and juicy. One of the very best. September to January.

Mammoth Black Twig. One of the very best winter Apples that we grow. Extra large in size; skin smooth, yellowish covered with deep red. Flesh tender, tinged with yellow, crisp, sub-acid, aromatic, of excellent quality in every respect, and will keep in fine condition until summer apples come.

G. G. Pippin. Large and bright yellow when fully ripe. Flesh tender and aromatic. Season September to January.

Ben Davis. Succeeds wherever apples are grown. Good keeper. Large, round, yellow with red stripes. Flesh white, juicy, sub-acid. Season November to March.

York Imperial. (Johnson's Fine Winter). Medium, white, shaded with crimson in the sun, juicy, crisp, mild, sub-acid. Tree moderately vigorous and productive. This is a large and beautiful red winter apple, originating in Pennsylvania, where it is a great success. Its foliage and fruit are free from scab. Its skin is bright yellow covered with bright red and striped; it is a good shipper, bringing the highest prices. Its bright red sells the fruit. This is the leading variety in Pennsylvania. Very hardy and suitable to any part of the country.

Jonathan. Medium, roundish, yellow, nearly covered with red, fine grained, tender and finely flavored. Tree slender and spreading with light colored shoots. Great apple of the West and Northwestern states. Succeeds in the East also. Most beautiful of apples. Season November to April.

Rome Beauty. This is a hardy, large and handsome apple, almost entirely covered with bright red, of highest quality. December to March. One of the best.

Winesap. Large, roundish, oblong; little yellow ground appearing on the shady side; flesh yellow, firm, crisp, with rich high flavor; quality very good, and highly esteemed wherever grown. Season November to May.

Baldwin. Large, roundish, skin deep red; flesh juicy, crisp, sub-acid, good flavor; very vigorous and productive. The best all-around winter apple for New England and Northern states. Splendid keeper. December to March.

Wealthy. An American that is becoming very popular on account of its handsome appearance and early fruiting. Hardy and productive. Fruit large size, roundish, skin smooth, splashed with dark red; flesh white, tender, juicy, sub-acid. November to January.

Apple Trees, *continued.*

Yellow Transparent. If you want the best and the most productive summer apple, plant Yellow Transparent. It succeeds well North and West. It will bear fruit in the nursery row on trees two years old. It's a strong upright grower and a great bearer.

Red Astrachan. Large, roundish, nearly covered with deep crimson, over-spread with a thick bloom, juicy rich, acid beautiful, The tree is a vigorous grower, with a large foliage; a good bearer. August.

Red June. Medium in size, red. Flesh white, tender, sub-acid, beautiful. The tree is a vigorous grower, with large foliage. Abundant bearer. July.

Winter Banana. Size large, golden yellow, and beautifully shaded with bright crimson red. Flesh lemon yellow, fine grained, sub-acid, rich, aromatic flavor, Season November to January.

Maiden Blush. One of the most beautiful; pale lemon with crimson cheek; flesh white, tender and crisp. October.

Northern Spy. Large, bright, light red and yellow. Flesh juicy, rich, crisp, tender, aromatic, of good flavor. Tree strong grower. November to March.

Wolf River. Winter. Exceedingly large and handsome. Skin is a bright yellow, mottled and blushed with deep red. Remarkably good shipper.

Early Harvest. Ripens in August. Medium size; pale yellow; fine flavor. Tree a moderate grower and a good bearer.

McIntosh. Medium size, nearly covered with a bright red; flesh yellowish, tender, juicy; sub-acid. October to February,

Spitzenburg. Winter. Medium size, round; dark red almost all over; firm, crisp, sub-acid. One of the very richest flavored of all apples.

Cherry Trees

	Each	10
First-class, 4 to 5 feet,	\$0.30	\$2.50

Montmorency. A cherry of the Richmond class but larger and more solid. A more upright grower, equally hardy and a heavy cropper. Ripens from seven to ten days later than the Richmond, entirely escaping danger from spring frost. A valuable addition to our orchard fruit.

Dye House. Partakes of both the Duke and Morello in wood and fruit; a very early and sure bearer; ripens a week before the early Richmond, of better quality and quite as productive.

Early Richmond. Medium size, dark red; juicy, rich acid flavor. The stone adheres to the stem. One of the most valuable of the sour cherries. Tree a slender grower, with a round spreading head, and exceedingly productive. The most hardy of all. June.

Dear Sir:

Mendacino Co., Feb. 1, 1915.

The plants arrived in good condition, although they were delayed some time on the road.
The plants seem to be fine strong ones. Respectfully, Mrs. J. S. Lampkin.

My testimonials are all genuine. Name and address on application. I have lots more and if you give me your order I will try to so please you that you will give me yours.

Plum Trees

	Each	10
First-class, 4 to 5 feet,	\$0.30	\$2.50

Red June. An early ripening Japanese plum; medium to large, roundish, conical, purplish red, handsome; flesh yellow, quality good.

Bradshaw. A very large, oval, dark violet red; juicy, sweet and good; a valuable market variety. Tree very vigorous; erect and productive. August 15th.

Abundance. Beautiful lemon yellow ground, nearly overspread with bright cherry and with a heavy bloom; large to very large, oblong tapering to the point. Flesh orange yellow, melting, rich and highly perfumed; abundant and annual bearer. Tree a very vigorous, upright grower. Highly recommended.

Peach Trees

	Each	10	100	1000
First-class, 5 to 6 feet,	\$0.20	\$1.50	\$11.00	\$80.00
First-class, 4 to 5 feet,	.15	1.30	8.00	70.00

Elberta. Mid-season. A valuable large peach of good quality; fruit large, yellow with red cheek; juicy and extremely high flavored; flesh yellow; freestone. The leading market variety. Ripens here about the middle of August.

Carman. A very hardy peach, ripening here about the middle of July; skin pale yellow, with blush on sunny side; flesh white, tender, sweet and melting. Ships well. The best early market peach.

Chair's Choice. Begins to ripen here about the first of September. Large in size; flesh firm of the sweetest and richest grape flavor; color yellow. Freestone.

Belle of Georgia. Ripens here the first to fifteenth of August. Fruit is large, white with red cheek. Flesh white, firm of excellent flavor. Tree a rapid grower and very productive. One of the very best market sorts. Freestone.

Hiley. This is a seedling of Belle of Georgia and is one of the best Chinese type, which are our most hardy peaches today; ripens about one week before the Belle of Georgia. A large creamy white peach with rich blush on sunny side; a long keeper and a fine shipper. A perfect freestone.

White Heath Cling. Ripens from September 10th to 15th. This is an old variety of cling peach and has never been excelled by any other of its class. Fruit extra large and roundish; flesh white and exceedingly juicy. It is a favorite with all housewives for canning purposes.

Greensboro. Ripens here from June 25th to July 10th. Extra large and our earliest peach to ripen. Large in size; white in color with a red cheek. Flesh rich and melting; very juicy; tree a strong grower. Anyone who has a yard or garden should set a few trees of this wonderful peach.

Saratoga. A fine late, large, yellow clingstone. If you want a yellow clingstone for canning or other purposes, this is the one.

Pear Trees

	Each	10	100	1000
2 year, 6 to 7 feet,.....	\$0.40	\$3.50	\$30.00	\$125.00
2 year, 5 to 6 feet,.....	.35	3.00	25.00	100.00

Bartlett. Large size, often with a beautiful blush next the sun; but, it is very juicy and high flavored. Tree a strong grower, bearing early and abundantly; very popular. Last of August first of September.

Kieffer. Large, rich golden, slightly coarse, juicy, with a pronounced quince flavor. Its freedom from blight, early bearing, wonderful productiveness, exceedingly vigorous growth, and handsome appearance all indicate that it has come to stay. Properly picked and cared for it is a good pear to eat out of the hand and for canning purposes it has no superior. October to November.

Dear Sir:

Pennsylvania, Oct. 27, 1914.

The Strawberry plants received and planted. Those received a week ago are showing young growth from the abundance of strong roots they had. Seems your soil is ideal for growing good plants.

Respectfully yours,

Daniel K. Herr.

Yes, our soil with the abundance of plant food used is ideal for growing nice, fibrous rooted plants. You should try them.

Currants

Fay's Prolific. For many years Fay's has held the same place among Currants that Concord has among Grapes—that of the most extensively planted of any on the list. Productive, large and a good shipper. The leading market variety.

Red Cross. A large and productive variety, and the best mid-season variety on the market. The masses of fruit are so dense as to hide the naked canes from view, and the fruit has a mild, pleasant flavor.

Price of above varieties of Currants, 10 for \$1, 100 for \$5.

Gooseberries

Downing. The largest of the American varieties. Whitish green, and of good quality. Strong, stout, upright grower, and quite prolific and healthy.

Houghton. Pale red, medium sized berries of good quality. Vigorous but slender grower, healthy and very productive.

Josselyn. A vigorous, upright growing bush, healthy and productive. Fruit is light red and about the size of the Downing.

Price of above varieties of Gooseberries, 10 for \$1, 100 for \$6.

Grape Vines

Caco. A cross of the Catawba and Concord, possessing the merits of both. Medium to large, nearly round; a little earlier than Concord; skin thin but tough; vine extremely vigorous, a strong grower and hardy. A heavy yielder. Try it.

Strong, transplanted Caco vines 40c each.

Agawam. A large, red grape, ripening with the Concord. Sweet, with rich, aromatic flavor. A rank grower and very productive.

Brighton. One of the earliest to ripen. Bunch large, well formed; berries above medium to large; round, excellent flavor and quality.

Catawba. Well known, red. Bunch and berry large and of a rich vinous, refreshing flavor, and best quality. Ripens several weeks after Concord.

Concord. The most extensively planted and generally successful grape in America. Black, bunch and berry large, fair quality, medium early, vine a rank grower, very healthy, hardy and productive.

Delaware. Red. The standard of excellence. Ripens with Concord. Bunch and berry medium, compact, flesh juicy, very sweet and refreshing; vine very hardy and productive; requires rich soil.

Diamond. White. A strong grower and quite healthy and hardy; very productive. Bunch and berry large. Quality fine. Ripens a little before Concord. Very desirable for both domestic and market purposes.

Moore's Early. Black. Bunch and berry large, vine exceedingly hardy. Its earliness makes it desirable for an early market and particularly adapts itself to the northern portions of the United States; also a good one for the South.

Niagara. Occupies the same position among the white varieties as Concord among the black; the leading profitable market sort. Bunch and berries large, greenish white changing to pale yellow when fully ripe. Skin thin but tough.

Any of above varieties except Caco, 15c each, \$1. for 10, \$4. per hundred.

Raspberries

St. Regis. Undoubtedly the best Red Raspberry grown. It succeeds upon all soils, and the canes are absolutely hardy in all sections. Gives a crop of fruit the year planted and two crops a year thereafter. In size, quantity and quality to say nothing of its fall-bearing qualities, it is ahead of anything as a spring bearing variety. About the middle of August it commences to set fruit on the young canes, and bears continuously from then until frost. The berries are large, beautiful and attractive. If you have failed with every other variety of Raspberry, either north or south, east or west, plant St. Regis and succeed. Whether grown for home use or market you cannot afford to ignore this, the most wonderful of all Raspberries. **25 for 75c, 100 for \$2.50, 1000 for \$15.**

Plum Farmer. A great favorite for both home and market use throughout the country. The fruit is of good size, often measuring one-half inch in diameter. The Plum Farmer is considered the best Black Raspberry. **Same price as St. Regis**

Cuthbert. A large, productive and attractive Red Raspberry that has given good results for home and market use. Very vigorous grower and possesses vitality necessary for a popular variety. It yields bountifully, is easily picked and brings good prices. **25 for 75c, 100 for \$2, 1000 for \$12.50.**

California Privet

Did you ever realize, when admiring a luxuriant Privet Hedge, that you could secure just such a hedge at a fraction of the cost of an ordinary unsightly fence? Well, you can, as you will see by the prices below. California Privet is the most popular of all hedge plants. It forms beautiful, symmetrical, live fences of great density. Its foliage is a rich dark green, and is nearly evergreen, remaining on the plant until mid-winter. It is of free growth, and succeeds under the most adverse conditions such as under shade of trees where other plants would not exist.

	10	100	250	500	1000
1 year 6 to 12 inch	\$0.20	\$1.00	\$2.25	\$4.00	\$8.00

Asparagus

Asparagus not only gives you a most excellent, wholesome and palatable vegetable, but also a great quantity from a comparatively small area at a time when other vegetables are scarce. Plant our 2-year old roots this spring will enable you to have your own supply of Asparagus next year. Plant the roots 15 inches apart on the row, (10 inches deep), cover lightly at first. Cultivate freely as the plants grow until the bed becomes level. Well rotted manure and fertilizers should be applied freely.

Conover's Colossal Palmetto Giant Argenteuil Barr's Mammoth

Price 1 year old: 40c for 50, 70c for 100, \$3.00 for 1000.

Price 2 year old: 60c for 50, \$1.00 for 100, \$4.00 for 1000.

TAKE ADVANTAGE OF THE OFFERS ON LAST COVER PAGE.

DAHLIAS

Standard Bearer. (Cactus) Brightest scarlet. Plant dwarf of branching habit.

Winsome. (Cactus) Undoubtedly the finest White Cactus Dahlia to date.

Mrs. Chas. Turner. (Cactus) Rich, large yellow.

Claribel. (Decorative) Very large; bright purple; long stems. Fine for cutting.

Jack Rose. (Decorative) Rich shade of crimson; full to the center. Plant of sturdy growth, producing an abundance of blooms on stout stems well above the foliage. Very fine for exhibition and as a cut flower.

Lyndhurst. (Decorative) One of the best bright scarlets; invaluable for cutting; large, perfectly full-centered flowers with long stems, borne well above foliage.

Sylvia. (Decorative) Flowers 4 to 6 inches in diameter; of fine form and full to the center. White, shaded to soft pink on the outer petals. Valuable cut-flower for long distance shipments.

A. D. Livoni. (Show) Beautiful, soft pink, with quilled petals. The standard pink for cutting.

Arabella. (Show) Very fine form. Pale primrose, tipped and shaded old rose and lavender.

Queen Victoria. (Show) Deep yellow, finely quilled.

Little Beauty. (Pompon) Delicate shrimp-pink; quilled petals.

Snowclad. (Pompon) Best white pompon.

Any of the above, in strong roots, 12c each, \$1.25 per dozen, postpaid.

GLADIOLI

There is probably no other flower that is gaining in popularity as rapidly as the Gladiolus. It is easily grown and very beautiful. It comprises a wonderful range of colors and its keeping qualities make it exceedingly desirable as a cut flower. Any one having the use of a garden spot can grow it at little cost, and a very small outlay for bulbs will make a good start.

America. This is by far the most popular variety before the public at the present time. Its rare color, a very delicate pink with a suggestion of lavender, its crimson markings in the throat, and its large, wide open flowers, most beautifully arranged upon the stem, form a combination that is wonderfully charming.

Brenchleyensis. Rich, brilliant, dark scarlet. Much used on account of its brilliant color and distinct marking.

Mrs. Francis King. A vigorous grower with a tall, straight spike. Flowers large, and of a pleasing shade of orange scarlet.

Princeps. A wonderful variety. The flower is immensely large, and the color is a deep, shining scarlet with large white marks on the lower petals. The spike is of medium length, and opens two or three flowers at a time.

Augusta. White with a faint tinge of blue, and blue anthers. It may be called the standard white. Sure to bloom and very hardy.

Independence. Fine, rich scarlet.

Goff's Hybrids. The size and beautiful shadings of this strain give the greatest possible range of varieties.

Any of the above Gladioli 5c each, 50c per doz., \$2.50 per hundred, postpaid.

Don't fail to carefully read the last cover page.

ROSES

Pink Killarney. Remarkable for its freedom of bloom and the large size of its intensely fragrant flowers. The buds are large, long and pointed. Color is exquisite, a brilliant imperial-pink, sparkling and beautiful.

White Killarney. More double than Pink Killarney, and the flowers are pure waxy white.

Dorothy Perkins. Grows 10 to 15 feet in a season. Flowers are perfectly double, with petals crinkled, and color is a clear shell pink, borne in immense clusters that cover the bush for several weeks in the spring.

Crimson Rambler. The famous crimson colored climber. Makes shoots 8 to 10 feet long in a season. Flowers are produced, from ground to tip, in large pyramidal clusters of 30 to 40.

American Beauty. Probably the widest known and most prized cut flower among all American Roses, and equally popular for bedding. Deep pink approaching crimson, of exquisite form and fragrance and large size.

Kaserin Augusta Victoria. Delicate creamy white; free blooming and quite hardy. Deliciously fragrant.

Paul Neyron. One of the finest hardy Roses ever grown. It blooms unceasingly from June to November, on uniformly long, stiff, thornless stems, with immense cup-shaped flowers 4 to 6 inches across. Color a bright ruddy pink.

Margaret Dickson. One of the choicest of the June Roses, with flowers nearly as large as Paul Neyron. Pure, waxy, unblemished white.

Clio. Color delicate satin blush, with a light shading of rosy pink at the center; very broad and full.

General Jacqueminot. The premier hardy crimson Rose. Famous the world over as one of the most magnificent hardy crimson Roses ever introduced. It is a strong, vigorous grower, entirely hardy, an early and profuse bloomer. Buds and flowers are considered models of perfection, and its brilliant, shining crimson color is the standard by which other Roses are judged.

Marshall P. Wilder. Extra large, full flowers; dark, deep red; very strong grower and free bloomer; very handsome.

Any of the above Roses, 25c each, \$2.50 per dozen, postpaid.

Dear Sir:

Bermuda, Dec. 11, 14.

Received the plants in very good condition. I am very much pleased with them. Send me your 1915 catalog. Hoping to do more business with you, I am

Very sincerely, E. S. Outerbridge.

Dear Sir:

Alabama, Feb. 20, 15.

Your Strawberry plants received today in fine shape, nice good stock showing that they had been grown and packed by a man that knows his business and willing to give value for the money. There is some show for berries with plants like these.

Yours truly, W. D. Null.

Dear Sir:

Pennsylvania, Feb. 11, 15.

Please send me your regular catalog as I would like to select some Strawberry plants from your list. One of my friends advised me to get plants of you as he could not praise them enough.

Yours, A. M. Guth.

MY PLANTS PLEASE AND BEAR BIG CROPS. TRY THEM.

The Wonderful Maryland Twin Corn

Mr. Hall, the introducer of whom I purchased corn says, "In 1910 it produced 110 bushels per acre; in 1911, 96 bushels per acre and it was a very dry year; in 1912, 112 3-8 bushels per acre; in 1913, 100 bushels per acre; in 1914, 75 bushels per acre. All the above yields were made without manure or fertilizer.

I fully expected to realize my ambition in 1914 by getting 125 bushels per acre, but instead I got the poorest yield I have ever had, owing to weather conditions. I did not get it planted as early as I should, and it was the most unfavorable season since I have been planting this corn; just at the time this corn needed moisture the most to fill out the ears we had the hottest and driest weather of the season. All varieties of corn that were planted early in this section the past year made much larger yields than those planted late. The farmers that succeeded in getting from 25 to 35 bushels per acre were those that planted early. Medium and late crops produced from 15 to 20 bushels per acre, so you can see that 75 bushels of this wonderful variety is indeed wonderful and shows the merits of this variety.

The foliage is abundant, leaves thick, broad and long; makes more fodder by one third, of the finest quality than any other variety of corn I have yet seen. Unexcelled for ensilage. It grows from 10 to 12 feet high and has from 2 to 4 ears on a single stalk. Ears from 7 to 11 inches long. The kernels are a nice even size, medium hard, good keeper, an excellent corn for milling, the meal from this corn being of the very finest quality and unexcelled for making corn flakes of any kind. The corn shells much better than any other variety of corn. The ears have 12 to 18 rows of deep kernels around a small white cob, compact and solid, very little air space, grains filled well out to the end of the cob. Grows well on light or heavy soil. Stalks strong and will mature in 110 to 115 days."

Price, \$1.00 per peck; \$3.00 per bushel; \$5.50 for 2 bushels.

Improved Farmers' Favorite Golden Dent. Light golden color and one of the best varieties of yellow corn ever grown. The cob carries a large amount of corn, the butts and tips are practically well covered with long, broad grains, grows very rapid and makes excellent ensilage. The ears are from 8 to 10 inches long, with 16 to 20 rows. The ears are large, the grain deep and broad. Cob red, medium size, ears are well set, 3 to 3 1-2 feet above ground. By careful selection we have bred out the barren stalk and a large percentage of the stalks have 2 ears. This corn, with a favorable season and soil will produce 80 to 100 bushels of shelled corn per acre. Produces a good crop on medium soils.

Price, same as above.

Dibble's Russet Potato

THE BEST MAIN CROP VARIETY

Introduced in 1912 by Edward F. Dibble of New York, who says, "If you could find a late crop potato with such a robust habit of growth that the rich, dark green vines covered the ground even when planted three feet apart each way, and that in a dry season, and these luxuriant vines were free from blight and not bothered with bugs, you would say that you had found a valuable variety. Then, if when you came to harvest the crop, you found under each hill six, eight, ten, and even twelve large-sized, round, white tubers, tubers as large and shapely as those of the Rurals, Carmans or Raleighs, but twice or three times as many per hill, tubers completely covered with a beautiful russet skin, and tubers which, whether you baked or boiled them, upon tasting, you at once pronounced 'the best potato you ever ate,' you would exclaim: 'This is the best potato I ever saw.' Dibble's Russet fits the above description in every particular." I want each one of my customers, who raises potatoes, either for home use or market to try this excellent potato this season. Place your order early and stock will be kept until wanted.

Price, \$3.00 per barrel; \$1.60 per bushel; \$1.00 per half bushel; 60c per peck.

Some Planting Suggestions

All varieties of the Strawberry give the greatest yield and the largest berries when grown in rich soil; hence no pains should be spared in preparing the bed carefully before planting, by digging or plowing deeply and turning under a liberal application of well-rotted manure. Pulverize the surface soil thoroughly with harrow and rake, and if a top-dressing of ground bone can be applied, it will be found a great benefit at fruiting time. Select a location where the soil is moist and deep if possible—moist and yet where water does not stand near or upon the surface. In such a soil well-enriched, Strawberries delight and give marvelous results. They will, however, succeed upon any soil if well manured. Strawberries do not succeed when planted in shady locations; hence in selecting a plot for them be careful to avoid places that are shaded by trees.

For hill culture in the family garden, set plants in rows two feet apart and the plants fifteen inches apart in the rows; or if to be worked by horse and cultivator, have the rows three feet and the plants one foot apart in the row. In either case, cut off the runners as they appear. If to be grown in matted rows, plant in rows three and one-half or four feet apart and the plants fifteen inches apart in the rows, permitting the runners to set in the row so as to be about six inches apart each way. The after-culture consists in keeping the soil mellow and free from weeds by frequent hoeing and cultivation. If you live in the North, where you are subject to severe freezes, I would advise you to mulch your plants. At the approach of winter (as soon as the ground is frozen sufficiently to support the weight of horse and cart) cover the entire bed with straw or other loose light material. Light strawy manure is excellent for this purpose, and the soluble portion leaches into the soil and affords nourishment to the plants, while the fibrous portion remains upon the surface as a mulch. Evergreen branches are very useful for holding the mulch in place and are of themselves a protection. When the plants start growth in spring, rake the mulch from off the plants sufficiently to permit them to push through it, and leave it on the surface about the plants to protect the fruit and keep it clean and also keep the soil moist and cool. An application of unleached wood-ashes or muriate of potash along the rows very early in spring, just before a rainfall, will be found to increase the size, beauty and flavor of the berries.

Strawberry Plants For Fall Planting

My sales of Strawberry plants in the fall are rapidly increasing. Most plant growers refuse to dig any plants before the first of November, because for every plant big enough to sell others are destroyed that would be good ones later. Our soil and conditions being especially adapted for an early growth, we usually begin shipping about October 1st and sometimes a little earlier. If you are interested in fall-planting you should have a copy of my fall price-list, which will be ready to mail about September 1st, each year.

Pot-Grown Strawberry Plants

For summer and fall planting. First class Pot-Grown strawberry plants which if set during the summer and fall will produce a full crop of fruit the following summer. The plants have a large mass of roots and are shipped with the earth on them, just as they grow in the pots. They will reach you in good growing condition and can be safely transplanted at any time, even in very dry weather. They will be shipped by express as they cannot be safely sent by mail. They will be ready for shipment any time after about the fifteenth of July. Special list of varieties and prices ready to mail about July 1st. Ask for it.

Special "Get Acquainted" Offers

Collection 1. Home Garden Collection.

This collection is just what you want for your home garden, contains early, medium, late and a fall-bearing variety. Why not have strawberries for the whole family when you can do so at such low cost?

Michel's Early, Lady Corneille, Joe Johnson and Progressive Fall-Bearing.
100 plants— 25 of each of the above four varieties, delivered to you for **\$1.00**
500 plants—125 of each of the above four varieties, delivered to you for **\$4.00**

Collection 2. Market Garden Collection.

This is a very good collection for the market gardener who wishes something extra fancy for his trade, something that will bring new customers.

Klondyke, Lady Corneille, Chesapeake and Joe Johnson
2000 plants— 500 each above four varieties, express collect for **\$6.00**
4000 plants—1000 each above four varieties, express collect for **\$11.00**

Collection 3. New varieties for trial.

A collection of new and comparatively new varieties especially recommended for trial.

600 plants in 24 select varieties, 25 each of Barrymore, Charles 1st, Collins, Doris, Early Jersey Giant, Early Ozark, Hammer, Joe Johnson, Jerome, Kellogg's Premier, Kellogg's Prize, Late Jersey Giant, Lady Corneille, McAlpine Pride of Delaware, Pride of Somerset, Pennuel, Progressive, Robbin's Prolific, Rewastico, Staples, Todd's Late Champion, Townsend's Late Champion and Warren. All the above plants by express for \$6.00.

This entire collection by express for \$8.00.

The Lady Corneille Strawberry in Florida.

*Mr. W. P. Pitts of Florida writing me October 16th says: "The Lady Corneille is a fine berry. It has been here only one season and that a bad one. It was killed badly in March by frost, but it had already supplied a lot of **High Priced** berries while the Klondyke had just started. With protection I believe it will beat Klondyke 2 to 1. It is also an everlasting worker—plants or berries all the time.*
