Kurume Azaleas

The Kurume Azaleas have been known to America only about 15 years, but in that time they have made wonderful progress as hardly a garden but what has one or more varieties of this wonder type of Azaleas. They are also well adapted to forcing—thousands of them being sold for Mother's Day, Easter and Decoration Day. They are comparatively easy to grow and they make such a wonderful display that the demand is continually increasing. Many of the varieties are hardy out of doors as far north as Long Island. They are extremely floriferous, and in season the blossoms often completely hide the leaves. The colors are of almost every hue and shade as you will find below.

Each X means one transplanting.

Varieties with an asterisk * are the hose-in-hose or double type.

AMOENA.* Flowers rosy purple, in dense masses. Hardy and early flowering. The foliage assumes a pleasing bronze tint in the fall and winter months.

Our Native Peat

To grow Azaleas and Rhododendrons successfully you must have leaf mold, peat in some form or some similar substance. We have used Russian, German and Holland Peat, leaf mold collected from under trees in our local forests, but by far the best material we have ever used is a form of native peat, a deposit of which we have found near here. It runs from twelve to twenty four inches thick and is composed of thoroughly decayed leaves, and other material in a maple swamp which has been generations in the making.

If you would like to try it we will send you a two-bushel bag for \$1.00. Will quote special prices on car-load lots or less. Try a sample bag, we believe you will like it so well you will want more.

Kaempferi Hybrid Azaleas

In these new Kaempferi Hybrids—the result of crossing Kaempferi and Malvatica—there has been obtained the hardiest type of evergreen Azalea, with a good range of form and color in the flowers so far achieved. Several years tests have demonstrated that these new Hybrids are just as hardy as Kaempferi, until now the hardiest of the evergreen sorts.

Arnoldiana Azaleas

In 1914 the late Jackson Dawson, then superintendent of the Arnold Arboretum, at Boston, Mass, created a splendid new type of hardy Azalea by crossing Azalea Kaempferi and Azalea Amoena. Of the seedlings thus secured a considerable number of them were grown at Boston from their infancy until flowering age, when the following ones of unusual beauty and vigor of growth were selected, discarding most of the others as less desirable. They have carried through fifteen winters in Massachusetts without protection or injury.

Considering their hardiness, their ultimate size, bushy form, splendid foliage, abundant bloom and desirable shades of color, they well deserve the distinction as "the most outstanding achievement in American plant breeding in many years." The late Dr. Ernest Wilson referred to them as "truly beautiful Azaleas." Which from so eminent and conservative authority is indeed high praise.

All are happiest when growing in full sunlight. They are deciduous in the north but evergreen here. The reddish bronze colored autumn foliage is very pleasing.

New U. S. D. A. Azaleas

A group of new varieties of this wonderful June-blooming hardy evergreen Azalea released by the U. S. Department of Agriculture. Most of these were collected by the Department at the Agricultural College, Imperial University Komaba, in Tokyo, Japan. They have been tried out by the U. S. Department of Agriculture staff and other interested growers and have been selected as being worthy of introduction in this country. We were one of the original growers selected to propagate these for the trade.

In ordering these Azaleas please use the number following the name, this will insure you getting the variety you want.

Indica Azaleas

The Indica Azaleas are the most attractive winter flowering shrubs in the south. Varieties of Azalea Indica coming into flower when so little else is in bloom are a mass of beauty on private estates of the south in early spring. The famous Magnolia Gardens near Charleston, S. C., where many varieties of Azaleas are seen by throngs (special trains being run just to see these wonderful Azaleas) of visitors every spring, has been said to be the loveliest spot in America.

While these Indica Azaleas are not dependably hardy, even this far north, I believe they would make one of the best pot-grown Azaleas for forcing and selling in the northern markets. It would be no trouble to have them in bloom by Christmas. Get a few and try them out. They are most showy.

A NEW BOOK—AZALEAS AND CAMELLIAS

By H. H. HUME

Interest in Azaleas and Camellias is greatly increasing. Until now, little information on varieties, care, and culture of these plants has been available. Mr. Hume accurately and thoroughly describes the varieties best suited for various uses and discusses questions on culture, such as soils, fertilization, planting, propagation, and general care, indoors and out. He has taken special care to describe accurately the several groups and varieties, and his suggestions on the use and culture are very practical. If you are growing Azaleas and Camellias you will find this book of much help.

Miscellaneous Azaleas

In the following list of Azaleas you will find many species. They are not classified or separated as to their different species but we hope to have this information as complete as possible for publication at a later time. We are trying to give such descriptions that you may know, or have a general idea what each variety is like.

Hardy Hybrid Rhododendrons

Most everybody agrees that Rhododendrons are among the most showy of all the flowering plants, and most everybody would also like to grow some but the price has always been a great drawback to quantity planting. We believe you will find our prices low enough so that you can resell them at a fair price and still make a good profit. This collection is among the very best of the hardy hybrid varieties; all good growing and good flowering kinds. Push them a little and see how your sales increase. The smaller sizes are just right for lining out and growing on.

BUXUS SUFFRUTICOSA (Old English Dwarf Box).

As a low edging in formal gardens there is no greater favorite than this variety of Box. This is the variety that is so much seen in Washington's garden at Mt. Vernon and in other noted gardens in Delaware, Maryland, Virginia, North Carolina and other Middle Atlantic States. Hardier than Sempervirens.

Ilex (Holly)

We consider the Holly one of the very best ornamental trees or shrubs. Nothing is prettier than one of our American Hollies with great clusters of bright red berries and dark green leaves shining above the snow in winter. The nurseryman who will grow a collection of Hollies to a specimen size will have something that he can sell whether times are good or whether they are bad. There is always a demand for them, and there will be as long as any other plants will sell. We believe there is money in growing them and will increase our stocks as fast as we can. Our advice is plant some Hollies and in a few years we believe you will have some valuable property.

Taxus (Yew)

It is only in the past few years that nurserymen in the United States have begun to really appreciate and grow the Yew. In England there are Yews more than a hundred years old, but unfortunately the English Yew (*Taxus Baccata*) is not reliably hardy in the North and many do not realize that the Japanese and many forms of *Media* are perfectly hardy in and around Boston, and the Japanese even in northern New England.

They are not so particular as to character of soil but they do appreciate a plenty of good plant food. They are immune to the many plant diseases and insects so destructive to so many other evergreens.

We think the Yew in its many species and forms can be used in most any and all places where any other evergreen will do well.

We honestly believe you will do well to plant and grow on some or many of these Yews.

	Each	10	100	1000
TAXUS BACCATA (English Yew). Widely planted in English churchyards. A good ornamental. Hardy as far north as New York City. Upright, dark green foliage. Very good for the South.

TAXUS CUSPIDATA. (Japanese Yew). For any and every purpose in which evergreens are required the Japanese Yew can be recommended. Perfectly hardy in the coldest parts of New England northward to Ottawa, Canada, immune from diseases or pests. Accomodating to an extraordinary degree, withstanding shade or full sunshine, dark green at all seasons of the year. Small wonder that this plant has been acclaimed Japan's greatest gift to the gardens of America.
