Snow	Herbert
Rosebud	Nome
Betty	Gumpo
Gumpo Pink	Dream
Glacier	Greeting

KURUME AZALEAS

The Kurume Azaleas are one of the most showy of all flowers for the garden. They are also well adapted to forcing—thousands of them being sold for Easter, Mother's Day, and Decoration Day. They are comparatively easy to grow and make a wonderful display. Many of the varieties are hardy out-of-doors as far north as Long Island. The colors are almost every hue and shade except yellow.

We will furnish one to five plants of a variety and size at each rate; five to 25 of a variety and size at the ten rate; 25 or more of a variety and size at the 100 rate.

If a variety is listed at 10 rate and not each rate, there will be an additional charge of 15 cents per plant if less than 5 are ordered.

GABLE'S HARDIER AZALEAS

Mr. Joseph B. Gable of Pennsylvania has spent almost a lifetime working with Azaleas and Rhododendrons. Many years ago he started breeding azaleas with the hopes of producing a hardier type of evergreen azalea in a good color range than then available. He has had wonderful success and is now recognized as the leader in the field.

These varieties will average hardier than Hinodegiri and Amoena and much hardier than the other Kurumes. All have lived and flowered in the open field where they have withstood temperatures of twenty below zero with only slight injury to a few. Most of them were uninjured.

If a variety is listed at 10 rate and not each rate there will be an additional charge of 15 cents per plant if less than 5 are ordered.

U. S. D. A. AZALEAS

Some years ago the U. S. Dept. of Agriculture introduced a collection of Azaleas mostly from Japan. We have selected the following, as one of the best.

BENI KIRISHIMA

4 yr. -----	7.00	60.00
-------------	------	-------

NEW U. S. D. A. AZALEAS

These varieties were developed by B. Y. Morrison and J. L. Creech at the U. S. Plant Introduction Station, Glenn Dale, Maryland, from a series of crosses made in 1947 and designed to incorporate some of the flower qualities of the Belgian-type azaleas into the hardy Glenn Dale hybrids.

After widespread trials of 96 selections, the azaleas listed here are considered to be the most promising for the azalea-growing areas of southeastern United States, from Washington, D. C., to Louisiana, and for forcing in all areas.

Their significant characteristic is in the pastel coloring of the flowers and the heavy texture of the petals. Occasionally the white selections are flecked and striped with red or purple, and some flowers show an irregular degree of doubleness. They flower in the Washington, D. C., area about May 8 to 15.

NOTE: EXPERIENCE HAS SHOWN THAT, OF THE FOLLOWING NEW U. S. D. A. AZALEAS, ONLY GREEN MIST IS HARDY AT THIS NURSERY. FOR OUTSIDE PLANTING WE RECOMMEND THAT THE OTHER THREE NOT BE USED NORTH OF RICHMOND, VIRGINIA.

	Each	10	100
3AYOU (PI 279405). A spreading azalea with leaves narrow elliptic, slightly hairy, dark green. Flowers 2½" across, single but with occasional petaloid stamens, white with occasional scarlet flakes and stripes.			
4 in. pot 3 yr -----	\$1.25	\$10.00	

	Each	10	100
GREEN MIST (PI 279406). A somewhat upright azalea with leaves glossy, narrow elliptic, glabrous. Flowers 2½" across, single, white with a distinct greenish blotch, heavy texture to the flowers.			

4 in. pot 3 yr. -----	1.25	\$10.00
-----------------------	------	---------

4 yr. field beds -----	.75	7.00
------------------------	-----	------

PINK ICE (PI 279408). A broad spreading azalea, with leaves dull green, large rather obovate, glabrous. Flowers 3" across, double, mallow purple with occasional purple flakes, smooth margins and crisp texture.

2¼ in. pot 2 yr. ---	.75	7.00
----------------------	-----	------

4 in. pot 3 yr. ---	1.25	10.00
---------------------	------	-------

WHITEHOUSE (PI 279409). A broad spreading azalea with leaves large, dull green, somewhat obovate, slightly hairy. Flowers 3¾" across, single, white with roundish petals with somewhat wavy margins and overlapping.

2¼ in. pot 2 yr. ---	.75	7.00
----------------------	-----	------

DEERFIELD AZALEAS

The following Azaleas were bred with the hope of getting hardier evergreen types. While we do not know how hardy they really are, we are offering them for your own testing.

NOME (Double Hinomayo). Medium size.

Pink.

18 to 24 in. B&B ----	4.00	37.50
-----------------------	------	-------

24 to 30 in. B&B ----	4.50	42.50
-----------------------	------	-------

VUYKIANA AZALEAS

A new race of large flowered Japanese Azaleas, produced by crossing hardy Azalea Malvatica with Azalea Mollis. Sturdy growers, prolific bloomers. From the information we have they are much hardier than the Kurume Azaleas. Flowers range from 2 to 2½ inches. All bloom late midseason. Plants grow tall.

PALESTRINA. We recommend this to use in place of *Ledifolia Alba* for a tall growing whitebloomer. Try it for a hardier tall white.

12 to 18 in. B&B ----	2.50	22.50
-----------------------	------	-------

18 to 24 in. B&B ----	4.00	35.00
-----------------------	------	-------

BELTSVILLE AZALEAS

The Beltsville Azaleas originated at the Plant Industry Station of the U. S. Department of Agriculture at Beltsville, Md. They are mostly good greenhouse flowering varieties as well as being hardy in colder sections. The description is from descriptions furnished by the U. S. Department of Agriculture.

POLAR BEAR. White. Good for forcing and outdoors.

3 yr. -----	6.00	50.00
-------------	------	-------

KAEMPFERI HYBRID AZALEAS

In the Kaempferi Hybrids—the result of crossing Kaempferi and Malvatica—there has been obtained the hardiest type of evergreen Azalea, with a good range of form and color in the flowers. Several years' tests have demonstrated that these Hybrids are just as hardy as Kaempferi, until now the hardiest of the evergreen sorts.

	Each	10	100
ATALANTA. Large light purple flowers. Strong grower.

BACK ACRE AZALEAS

These azaleas are the first of the seedlings grown on personally by B. Y. Morrison with a breeding program that is an extension of one phase of the original Glenn Dale work. They are not Glenn Dales, but are more closely related to the Satsuki group from Japan.

The breeding program centered and still centers on the production of double flowers that will be hardy for outside work, and in as wide a range of kinds that have white or nearly white centers and colored margins. The doubles are represented in this offering.

These kinds are from parents that are perfectly cold hardy in Washington, D. C. and plants have been tested safely in that area, in Memphis, Tenn., and in the general Atlanta area. In extremely cold winters there was some loss of flower buds.

The usual variation in degree of doubling may be expected on newly set plants, and the variations in light centers will vary considerably until the plants are old enough to have many, small, blooming shoots.

HEIRLOOM. Single 3 in. flowers between Tyrian pink and Mallow purple. Rhodamine purple on colored margins. Late midseason. Evergreen. 3 yr.

MARGARET DOUGLAS. 2 to 2½ in. flowers. La France centers, margins Rose Doree. Some dots in the blotch area of Tyrian Rose. Some flowers will be selfs. 4 yr.

MARIAN LEE. 2½ inch flowers. Pale rose pink center edged with nopal red with white eyes. The flower is flatter than some. 4 yr.

MAY BLAINE. Evergreen. Late flowering double 2½ to 3 inches. Well imbricated in form like a formal Camellia. Carries in the garden effect as a light lavender. 4 yr.

MISS JANE. Evergreen, late flowering, double. Center of flowers irregularly near white; border pink. Grows as broad as tall 4 yr.

MISTY PLUM. Evergreen; late midseason; single. Margins purple, irregular white center with dots of purple on white. Large. 4 yr.

SAINT JAMES. Three inch flowers. Rose Doree which carries as a salmon pink. When the plants are mature they usually come with a starry white center. 4 yr.

STARFIRE. Early flowering double. Geranium pink, dots on upper lobes rose. Garden effect coral pink. Evergreen to semi-evergreen. Leaves narrow to light green. 4 yr.

STORMCLOUD. Evergreen; late flowering. Mallow purple with a blotch of aster purple dots. 10 yr. plant about 4 ft. and as broad as tall 4 yr.

TARGET. About 2 to 3 inches across. Single, pure red with small rounded dark green foliage. 4 yr.

WHITEJADE, 2 in. flowers smooth edges, pure white, green in center. This is a superb white. 4 yr.

SATSUKI HYBRID AZALEAS

A new group of dwarfs from the Chugai Nursery Co. near Osaka, Japan. These are late flowering. Flowers are usually variegated, white or pink ground with red, lilac or purple stripes, white base with colored margin, or purple with white variegation and edge. These need more and wider trial before we can recommend planting in exposed or colder sections.

Many of the variegated sorts will vary in color on the same plant.

The descriptions were furnished us by The Chugai Nursery Company and are not yet complete.

GLENN DALE AZALEAS

Since we began growing Glenn Dale Azalea, in 1941, they have become rather widely known and the demand for them has increased rapidly. Their ability to survive in areas where evergreen azaleas has previously winter killed has made them very popular.

Sometimes, when their flowers are described as striped or flaked, there will be scattered branches of solid colored flowers. Those branches should be cut out. This characteristic is inherent to the variety, not a fault of the nurseryman.

THE RARE FRANKLINIA

A Very Unusual Flowering Tree

Each twig develops at its tip a cluster of buds of graduated size, like overgrown greenish pearls. Early in August the largest of these attain the size of marbles. Then the guard petal folds back, still retaining its firm spherical form. From this shelter emerges four other petals, satiny, snowy white, elaborately frilled and pleated. The snowy, frilly chalice, three inches in diameter, holds a sumptuous mass of orange-gold stamens and breathes forth a delicate, balmy fragrance.

Each flower lasts two or three days and then drops cleanly. There is a constant succession of blooms till hard frost. We frequently get the unusual effect of a tree clad in crimson, autumn foliage and abundantly starred with white flowers.

The Franklinia begins blooming when not more than 3 or 4 feet high. Young trees under favorable conditions increase in height a foot or more each season. Specimens 30 feet high are known. It develops naturally with several trunks, but may easily be trained to a single trunk by removing the sprouts which start from the base.

Franklinia prefers full sun, has proved entirely hardy about New York and hardy in favorable locations about Boston, Mass., and in Ohio.

HEATHER

For convenience we have listed both the Callunas (Heathers) and the Ericas (Heaths) under one heading. Because of the very large amount of soil that clings to even small heathers, and the resultant cost of wrapping we are pricing the wrapped and those not wrapped separately. Thus our customers, who can pick up their plants here, can take the advantage of an appreciable savings.

Prices of Heathers Not Wrapped.

MORE HATFIELD YEWS

The following varieties were grown from stock purchased from the late T. D. Hatfield. He selected these as being the best of his unnamed varieties and we are still carrying them under his original numbers.

Hatfield No. 6. Somewhat like No. 8 in growth but twigs are not as heavy; leaves narrow, very graceful.				
12 to 15 in. trans. ----		4.00	35.00	
Hatfield No. 18. Similar in growth to <i>Taxus cuspidata</i> . Foliage a shade lighter making it wonderfully attractive. Probably the most rapid grower of all the low types of <i>Taxus</i> . However, it can be kept compact with a little shearing. If you want a good, quick grower, yet one having the good qualities of <i>Cuspidata</i> .

EDCO IRON

For experimental use in the control of chlorosis (lack of chlorophyll) in azaleas, gardenias, roses, citrus crops, etc.

Results to date have shown Edco Iron to be very effective in correcting chlorosis in the above crops. Chlorosis may be caused by the excess or deficiency of several major or minor nutrient elements in the plant besides iron, and it may be caused by an excess of water or its lack, but Edco Iron commonly seems to help correct the effect if not the cause of these several conditions.

Full directions for using with each lot.

Prices: 1 lb. \$2.90: 10 or more lbs. at \$2.70 per lb.

READ BEFORE ORDERING

MAXIMUM SHIPPING SIZE. We do not ship plants that are in excess of 6 feet tall.

PRICE SCHEDULE FOR BALLING AND BURLAPPING. In case of those plants specifically listed B&B the prices in this catalog include the cost of balling and burlapping. Others are shown at bare root prices. A general guide for the additional charge of balling and burlapping follows:

Height of Plant	Charge
21½ to 3 ft.	\$1.00
3 to 4 ft.	1.50
4 to 5 ft.	2.00
5 to 6 ft.	3.00

These charges may vary depending upon the variety of plant involved.

PLANTS NOT LISTED HERE. We have many plants which are not listed in the catalog because they are too large to ship, or because we have them in too small quantity. The large ones, in many cases, would be of particular value to landscapers. We welcome your inquiry for materials to meet your specific needs.

HARDINESS OF PLANTS. When hardiness of plants is mentioned herein it applies to this area.

TIME OF SHIPMENT. We can ship throughout the year except during extreme winter weather.

PLAN TO VISIT OUR NURSERY.

We welcome your visit and extend to you the invitation to see our plant material. We are on the Eastern Shore of Maryland, ten miles east of Salisbury.

AUNT MARY'S SWEET CORN

This is the best sweet corn we have ever grown. One of our customers describes it as the "best sweet corn in the world." It is delicious and remains soft and edible much longer than the ordinary varieties of sweet corn. In fact it usually requires artificial heat to cure it for seed purposes. Its characteristic sweet flavor and excellent quality make it more popular than most other varieties of sweet corn.

HEATH AND HEATHER

(Erica And Calluna)

An easy way to have a colorful display of flowers when few other plants are in bloom is by using Heath & Heather. These are low growing shrubs, frequently used as a ground cover, which bear small flowers on spikes. Heath (Erica) typically blooms in late winter and early spring. Heather (Calluna) usually blooms in late summer and early fall. Calluna Vulgaris Tib, in our field beds, has bloomed from August to January. Both types, Erica and Calluna, are easily grown in well drained, acid type soil. They have withstood the winters at this nursery, without any winterkill problem, for the past fifteen years. In fact, they are grown extensively in Oregon, which testifies to their hardiness.

See page 23 of this catalog for a broad listing of Calluna And Erica.
